Best American Movies of All Time

Source: American Film Institute

First unveiled in 1998 based on ballots sent to 1,500 individuals, mostly from the film world, in 1997. Updated in 2007 (the version shown here) to include newly eligible films and reflect shifting cultural perspectives. Criteria for judging included historical significance, cultural impact, critical recognition and awards, and popularity. The year each film was first released is in parentheses.

1.	Citizen Kane (1941)
2.	The Godfather (1972)
3.	Casablanca (1942)
4.	Raging Bull (1980)
5.	Singin' in the Rain (1952)
6.	Gone With the Wind (1939)
7.	Lawrence of Arabia (1962)
8.	Schindler's List (1993)
9.	Vertigo (1958)
10.	The Wizard of Oz (1939)
11.	City Lights (1931)
12.	The Searchers (1956)
13.	Star Wars (1977)
14.	Psycho (1960)
15.	2001: A Space Odyssey (1968)
16.	Sunset Boulevard (1950)

17.	The Graduate (1967)
18.	The General (1927)
19.	On the Waterfront (1954)
20.	It's a Wonderful Life (1946)
21.	Chinatown (1974)
22.	Some Like It Hot (1959)
23.	The Grapes of Wrath (1940)
24.	E.T. the Extra-Terrestrial (1982)
25.	To Kill a Mockingbird (1962)
26.	Mr. Smith Goes to Washington (1939)
27.	High Noon (1952)
28.	All About Eve (1950)
29.	Double Indemnity (1944)
30.	Apocalypse Now (1979)
31.	The Maltese Falcon (1941)
32.	The Godfather Part II (1974)
33.	One Flew Over the Cuckoo's Nest (1975)
34.	Snow White and the Seven Dwarfs (1937)
35.	Annie Hall (1977)
36.	The Bridge on the River Kwai (1957)
37.	The Best Years of Our Lives (1946)
38.	The Treasure of the Sierra Madre (1948)
39.	Dr. Strangelove (1964)
40.	The Sound of Music (1965)
41.	King Kong (1933)
42.	Bonnie and Clyde (1967)
43.	Midnight Cowboy (1969)
44.	The Philadelphia Story (1940)
45.	Shane (1953)
46.	It Happened One Night (1934)

48.	Rear Window (1954)
49.	Intolerance (1916)
50.	The Lord of the Rings: The Fellowship of the Ring (2001)

Film and TV Content Ratings

The Motion Picture Association of America (MPAA) established a ratings system in 1968. It was revised in 1984 and in 1990. The MPAA, Natl. Cable Television Assn., and Natl. Assn. of Broadcasters developed the TV ratings system in 1997, in accordance with the Telecommunications Act of 1996; it was implemented in Oct. 1997.

Film Ratings

G: General Audience. All ages admitted. Does not contain themes, language, nudity, sex, or violence that the MPAA ratings board believes would offend parents whose younger children see the film. Does not necessarily denote a certificate of approval nor children's movie. No nudity, sex scenes, or drug use depicted.

PG: Parental Guidance Suggested. Some material may not be suited for children. The MPAA ratings board recommends that parents determine whether the content of the film is appropriate for their children. The film may contain more mature themes, some profanity, violence, or brief nudity. No drug use depicted.

PG-13: Parents Strongly Cautioned. Some material may be inappropriate for children under 13. Any movie depicting drug use or more than brief nudity is automatically rated at least PG-13. Violence is permitted, though it is generally not both realistic or extreme and persistent violence. The single use of one sexually-derived expletive rates a PG-13; more than one use requires at least an R rating.

R: Restricted. Under 17 requires accompanying parent or adult guardian. Movies given R ratings contain some adult material, defined as adult themes or activity, hard language, intense or persistent violence, sexually-oriented nudity, or drug abuse.

NC-17: No One 17 and Under Admitted. Those films that most parents would consider too adult for children under 17. An NC-17 rating does not mean the film is obscene or pornographic. The rating can be based on violence, sex, aberrational behavior, drug abuse, or any other element.

TV Ratings

TV-Y: All Children. Program designed to be acceptable for children of all ages. Its themes and elements are designed for a very young audience.

TV-Y7: Directed to Older Children. Program designed for children ages 7 and older, and more appropriate for those who have the skills to distinguish between make-believe and reality. May

include mild fantasy/comedic violence. Programs with more than mild fantasy violence are denoted TV-Y7-FV.

TV-G: General Audience. Program not necessarily designed for children, but most parents would find it suitable for all ages. Little or no violence, no strong language, and little or no sexual dialogue or situations.

TV-PG: Parental Guidance Suggested. Program might contain material that parents would consider inappropriate for children, such as an adult theme or one or more of the following: suggestive dialogue (D), infrequent coarse language (L), some sexual situations (S), or moderate violence (V).

TV-14: Parents Strongly Cautioned. Program contains material that many parents would consider inappropriate for children under 14, such as one or more of the following: intensely suggestive dialogue (D), strong coarse language (L), intense sexual situations (S), or intense violence (V).

TV-MA: Mature Audience Only. Program specifically designed for adults and may be unsuitable for children under 17. Contains one or more of the following: crude indecent language (L), explicit sexual activity (S), or graphic violence (V).

1) Includes one return engagement. (2) Includes two return engagements. (3) Broadway shut down Mar. 12, 2020, due to the COVID-19 pandemic. Broadway shows began

reopening on Sept. 14, 2021. (4) Includes five return engagements.

Notable U.S. Museums

This unofficial list of some of the largest museums in the U.S., by budget, was compiled with the assistance of the American Association of Museums (AAM). Zoos, aquariums, arboretums, botanical gardens, and planetariums may be AAM members but are not included here.

Museum	City	State
Academy Museum of Motion Pictures	Los Angeles	CA
American Museum of Natural History	New York	NY
Amon Carter Museum of Western Art	Ft. Worth	TX
The Art Institute of Chicago	Chicago	IL
Boston Children's Museum	Boston	MA
Brooklyn Museum of Art	Brooklyn	NY
Busch-Reisinger Museum	Cambridge	MA
California Academy of Sciences	San Francisco	CA
California Science Center	Los Angeles	CA
Carnegie Museums of Pittsburgh	Pittsburgh	PA
Children's Museum of Indianapolis	Indianapolis	IN
Cincinnati Art Museum	Cincinnati	OH
Cincinnati Museum Center	Cincinnati	OH
Cleveland Museum of Art	Cleveland	OH
Colonial Williamsburg	Williamsburg	VA
Corning Museum of Glass	Corning	NY
Crystal Bridges Museum of American Art	Bentonville	AR
Dallas Museum of Art	Dallas	TX
Denver Art Museum	Denver	CO
Denver Museum of Nature and Science	Denver	CO
Detroit Institute of Arts	Detroit	MI
Exploratorium	San Francisco	CA
The Field Museum	Chicago	IL
Fine Arts Museums of San Francisco	San Francisco	CA
Franklin Institute	Philadelphia	PA
The Frick Collection	New York	NY
J. Paul Getty Museum	Los Angeles	CA

Solomon R. Guggenheim Museum of Art	New York	NY
Harvard University Art Museums	Cambridge	MA
Henry F. DuPont Winterthur Museum	Winterthur	DE
Henry Ford Museum/Greenfield Village	Dearborn	MI
High Museum of Art	Atlanta	GA
Houston Museum of Natural Science	Houston	TX
Jamestown-Yorktown Foundation	Williamsburg	VA
Jewish Museum	New York	NY
L.A. County Museum of Art	Los Angeles	CA
Liberty Science Center, Liberty State Park	Jersey City	NJ
Maryland Science Center	Baltimore	MD
Mashantucket Pequot Museum and Research Center	Mashantucket	CT
Metropolitan Museum of Art	New York	NY

Children's and Young Adult Hardcover

1. *Dog Man: Mothering Heights (Dog Man #10)*, Dav Pilkey
2. *Big Shot (Diary of a Wimpy Kid Book #16)*, Jeff Kinney
3. *Rowley Jefferson's Awesome Friendly Spooky Stories*, Jeff Kinney
4. *Cat Kid Comic Club: Perspectives (Cat Kid Comic Club #2)*, Dav Pilkey
5. *The Christmas Pig*, J. K. Rowling
6. *Change Sings: A Children's Anthem*, Amanda Gorman
7. *Time for School, Little Blue Truck*, Alice Schertle
8. *The Dangerous Gift (Wings of Fire #14)*, Tui T. Sutherland
9. *Harry Potter and the Chamber of Secrets (MinaLima Edition) (Illustrated Edition)*, J. K. Rowling
10. *Captain Underpants and the Tyrannical Retaliation of the Turbo Toilet 2000 (Captain Underpants #11)*, Dav Pilkey

Note: Hardcover bestsellers include 2020 and 2021 releases. Trade paperback bestsellers are for overall 2021 sales of paperback editions for titles first published in any year. Mass market fiction and children's and young adult bestsellers include frontlist/2021 releases only.

Most Challenged Books, 2021

Source: Office for Intellectual Freedom, American Library Association (ALA)

A challenge is a formal, written complaint filed with a library or school requesting that materials be removed because of content or appropriateness. Half of the complaints in 2021 were initiated by parents. The common reasons given for challenges follow each book's title and author.

1. *Gender Queer*, Maia Kobabe. LGBTQIA+ content, explicit images.
2. *Lawn Boy*, Jonathan Evison. LGBTQIA+, sexually explicit content.
3. *All Boys Aren't Blue*, George M. Johnson. LGBTQIA+ content, profanity, sexually explicit.
4. *Out of Darkness*, Ashley Hope Perez. Depictions of abuse, sexually explicit.
5. *The Hate U Give*, Angie Thomas. Profanity, violence, anti-police views.
6. *The Absolutely True Diary of a Part-Time Indian*, Sherman Alexie. Profanity, sexual overtones.
7. *Me and Earl and the Dying Girl*, Jesse Andrews. Sexually explicit, degrading to women.
8. *The Bluest Eye*, Toni Morrison. Sexually explicit.
9. *This Book Is Gay*, Juno Dawson. LGBTQIA+ content.
10. *Beyond Magenta*, Susan Kuklin. LGBTQIA+ content, sexually explicit.

Multi-Platinum Awards for Recorded Music, 2021-22

Source: Recording Industry Assn. of America (RIAA)

To be certified platinum, an album must sell 1 mil units (LPs, CDs, or digital) with a manufacturer's dollar volume of at least \$2 mil based on one-third of the suggested retail list price for each copy sold. To achieve multi-platinum status, an album must reach minimum total sales of at least 2 mil units with a manufacturer's dollar volume of at least \$4 mil based on one-third of the list price. RIAA began including streaming in their award formulas in 2018; 1,500 streams count as the equivalent of 10 track sales or 1 album sale. Digital singles must sell 2 mil to achieve a multi-platinum award. For digital singles award formulas, 150 streams equal one download sold.

Awards listed here are for albums and digital singles (released Sept. 2020-Aug. 15, 2022) that were certified Sept. 2021-Aug. 15, 2022. Number in parentheses represents millions sold. Alphabetized by artist name.

Albums

30, Adele (3)

Sour, Olivia Rodrigo (3)

Dangerous: The Double Album, Morgan Wallen (3)

Digital Singles

"Easy on Me" (3), Adele

AWARDS — MEDALS — PRIZES

Alfred B. Nobel Prizes, 1901-2022

Alfred B. Nobel (1833-96) bequeathed \$9 mil, the interest on which was to be distributed yearly to those judged to have most benefited humankind in chemistry, literature, promotion of peace, physics, and physiology or medicine. Prizes were first awarded in 1901. The prize in economics, funded by Sweden's central bank, was first awarded in 1969. Each prize is now worth 10 mil Swedish kronor (about \$900,000 in 2022). If year is omitted, no award was given. The Royal Swedish Academy selects prize winners for chemistry, economics, and physics; the Nobel Assembly at Karolinska Institutet, physiology or medicine; the Swedish Academy, literature; and the Norwegian Nobel Committee, the peace prize. Winners sharing a prize are generally listed in alphabetical order, except when the awarding body has given a larger proportion of a shared prize to one or more recipients.

Physics

1901	Wilhelm C. Röntgen, Ger.
1902	Hendrik A. Lorentz, Pieter Zeeman, Neth.
1903	Antoine Henri Becquerel, Pierre Curie, Fr.; Marie Curie, Pol.-Fr.
1904	Lord Rayleigh (John W. Strutt), UK
1905	Philipp E. A. von Lenard, Ger.
1906	Joseph J. Thomson, UK
1907	Albert A. Michelson, U.S.
1908	Gabriel Lippmann, Fr.
1909	Carl F. Braun, Ger.; Guglielmo Marconi, Ital.
1910	Johannes D. van der Waals, Neth.
1911	Wilhelm Wien, Ger.
1912	Nils G. Dalén, Swed.
1913	Heike Kamerlingh Onnes, Neth.
1914	Max von Laue, Ger.

1915	William H. Bragg, William L. Bragg, UK
1917	Charles G. Barkla, UK
1918	Max K. E. L. Planck, Ger.
1919	Johannes Stark, Ger.
1920	Charles E. Guillaume, Fr.-Switz.
1921	Albert Einstein, Ger.-U.S.
1922	Niels Bohr, Den.
1923	Robert A. Millikan, U.S.
1924	Karl M. G. Siegbahn, Swed.
1925	James Franck, Gustav Hertz, Ger.
1926	Jean B. Perrin, Fr.
1927	Arthur H. Compton, U.S.; Charles T. R. Wilson, UK
1928	Owen W. Richardson, UK
1929	Prince Louis-Victor de Broglie, Fr.
1930	Chandrasekhara V. Raman, India
1932	Werner Heisenberg, Ger.
1933	Paul A. M. Dirac, UK; Erwin Schrödinger, Austria
1935	James Chadwick, UK
1936	Carl D. Anderson, U.S.; Victor F. Hess, Austria
1937	Clinton J. Davisson, U.S.; George P. Thomson, UK
1938	Enrico Fermi, Ital.-U.S.
1939	Ernest O. Lawrence, U.S.
1943	Otto Stern, U.S.
1944	Isidor Isaac Rabi, U.S.
1945	Wolfgang Pauli, U.S.-Austria
1946	Percy W. Bridgman, U.S.
1947	Edward V. Appleton, UK
1948	Patrick M. S. Blackett, UK
1949	Hideki Yukawa, Jpn.
1950	Cecil F. Powell, UK
1951	John D. Cockcroft, UK; Ernest T. S. Walton, Ire.
1952	Felix Bloch, Edward M. Purcell, U.S.
1953	Frits Zernike, Neth.
1954	Max Born, UK; Walter Bothe, Ger.
1955	Polykarp Kusch, Willis E. Lamb, U.S.
1956	John Bardeen, Walter H. Brattain, William Shockley, U.S.

1957	Tsung-Dao Lee, Chen Ning Yang, U.S.-China
1958	Pavel Cherenkov, Il'ja Frank, Igor Y. Tamm, USSR
1959	Owen Chamberlain, Emilio G. Segre, U.S.
1960	Donald A. Glaser, U.S.
1961	Robert Hofstadter, U.S.; Rudolf L. Mossbauer, Ger.
1962	Lev D. Landau, USSR
1963	Maria Goeppert-Mayer, Eugene P. Wigner, U.S.; J. Hans D. Jensen, Ger.
1964	Nicolay G. Basov, Aleksandr M. Prokhorov, USSR; Charles H. Townes, U.S.
1965	Sin-Itiro Tomonaga, Jpn.; Julian S. Schwinger, Richard P. Feynman, U.S.
1966	Alfred Kastler, Fr.
1967	Hans A. Bethe, U.S.
1968	Luis W. Alvarez, U.S.
1969	Murray Gell-Mann, U.S.
1970	Hannes Alfvén, Swed.; Louis Néel, Fr.
1971	Dennis Gabor, UK
1972	John Bardeen, Leon N. Cooper, John R. Schrieffer, U.S.
1973	Brian D. Josephson, UK; Leo Esaki, Jpn.; Ivar Giaever, U.S.
1974	Antony Hewish, Martin Ryle, UK
1975	Aage Bohr, Den.; Ben Mottelson, U.S.-Den.; Leo James Rainwater, U.S.
1976	Burton Richter, Samuel C. C. Ting, U.S.
1977	Philip W. Anderson, John H. van Vleck, U.S.; Nevill F. Mott, UK
1978	Pyotr Kapitsa, USSR; Arno Penzias, Robert Wilson, U.S.
1979	Sheldon L. Glashow, Steven Weinberg, U.S.; Abdus Salam, Pakistan
1980	James W. Cronin, Val L. Fitch, U.S.
1981	Nicolaas Bloembergen, Arthur Schawlow, U.S.; Kai M. Siegbahn, Swed.
1982	Kenneth G. Wilson, U.S.
1983	Subramanyan Chandrasekhar, William A. Fowler, U.S.
1984	Carlo Rubbia, Ital.; Simon van der Meer, Neth.
1985	Klaus von Klitzing, Ger.
1986	Ernest Ruska, Gerd Binnig, Ger.; Heinrich Rohrer, Switz.
1987	J. Georg Bednorz, Ger.; K. Alex Müller, Switz.
1988	Leon M. Lederman, Melvin Schwartz, Jack Steinberger, U.S.
1989	Norman F. Ramsey, U.S.; Hans G. Dehmelt, Ger.-U.S.; Wolfgang Paul, Ger.
1990	Jerome I. Friedman, Henry W. Kendall, U.S.; Richard E. Taylor, Can.
1991	Pierre-Gilles de Gennes, Fr.
1992	Georges Charpak, Pol.-Fr.

1993	Russell A. Hulse, Joseph H. Taylor, U.S.
1994	Bertram N. Brockhouse, Can.; Clifford G. Shull, U.S.
1995	Martin Perl, Frederick Reines, U.S.

Pulitzer Prizes in Journalism, Letters, and Music, 1917-2022

Endowed by Joseph Pulitzer (1847-1911), publisher of the *New York World*, in a bequest to Columbia Univ. and awarded annually, in years shown, for work published the previous year. Prizes are currently \$10,000 in each category except Public Service (in Journalism), for which a gold medal is given. The prize board began considering submissions from online-only publications in 2009.

Pulitzer Prizes in Journalism, 2022

Public Service: *Washington Post*, for account of the assault on Washington on January 6, 2021.

Breaking News Reporting: *Miami Herald* staff, for coverage of the collapse of the Champlain Towers South condominium.

Investigative Reporting: Corey G. Johnson, Rebecca Woolington, Eli Murray, *Tampa Bay Times*, for exposé of toxic hazards in Florida's only battery recycling plant.

Explanatory Reporting: *Quanta Magazine* staff, notably Natalie Wolchover, for coverage of the building of the James Webb Space Telescope.

Local Reporting: Madison Hopkins, Better Government Assn., and Cecilia Reyes, *Chicago Tribune*, for examination of Chicago's failed building- and fire-code safety enforcement.

National Reporting: *NY Times* staff, for project that quantified a disturbing pattern of traffic stops by police.

International Reporting: *NY Times* staff, for reporting that exposed the vast civilian toll of U.S.-led airstrikes, challenging official accounts of engagements in Iraq, Syria, and Afghanistan.

Feature Writing: Jennifer Senior, *The Atlantic*, for portrait of a family's reckoning with loss in the 20 years since 9/11.

Commentary: Melinda Henneberger, *Kansas City Star*, for columns demanding justice for alleged victims of a retired police detective accused of being a sexual predator.

Criticism: Salamishah Tillet, *NY Times*, for writing about Black stories in art and popular culture.

Editorial Writing: Lisa Falkenberg, Michael Lindenberg, Joe Holley, Luis Carrasco, *Houston Chronicle*, for campaign that revealed voter suppression tactics, rejected the myth of widespread voter fraud, and argued for sensible voting reforms.

Illustrated Reporting and Commentary: Fahmida Azim, Anthony Del Col, Josh Adams, Walt Hickey, *Insider*, for using graphic reportage and the comics medium to tell story of Chinese oppression of the Uyghurs.

Breaking News Photography: Marcus Yam, *L.A. Times*, for images of the U.S. departure from Afghanistan; and Win McNamee, Drew Angerer, Spencer Platt, Samuel Corum, Jon Cherry, Getty Images, for photos of the attack on the U.S. Capitol.

Feature Photography: Adnan Abidi, Sanna Irshad Mattoo, Amit Dave, Danish Siddiqui, Reuters, for images of the COVID-19 pandemic toll in India.

Audio Reporting: Staffs of Futuro Media and PRX, for “Suave,” a profile of a man reentering society after more than 30 years in prison.

Special Citation: The Journalists of Ukraine, for their courage, endurance, and commitment to truthful reporting.

Pulitzer Prizes in Letters, 1918-2022

Other Pulitzer Prize Winners, 2022: Biography/autobiography: Winfred Rembert as told to Erin I. Kelly, *Chasing Me to My Grave: An Artist’s Memoir of the Jim Crow South*. History: Nicole Eustace, *Covered With Night*, and Ada Ferrer, *Cuba: An American History*. Poetry: Diane Seuss, *frank: sonnets*.

National Book Awards, 1950-2021

The National Book Awards (known as American Book Awards 1980-86) are administered by the National Book Foundation and have been given annually since 1950. The \$10,000 prizes are awarded for works published in the U.S. In some years, multiple awards were given for nonfiction in various categories; in such cases, the history and biography (if any) or biography winner is listed. Selected additional awards in nonfiction are listed in footnotes.

Other National Book Awards, 2021: Poetry: Martín Espada, *Floater*s. Translated Literature: Elisa Shua Dusapin, Aneesa Abbas Higgins, *Winter in Sokcho*. Young People's Literature: Malinda Lo, *Last Night at the Telegraph Club*. Distinguished Contribution to American Letters: Karen Tei Yamashita. Literarian Award: Nancy Pearl.

SCIENCE

Science and Technology News

The following were some of the developments in science and technology in the previous year, as of Sept. 2022.

Material Marvels

A microphone works by converting sound (basically, pressure waves) into electric signals. Research published in the Mar. 24, 2022, issue of *Nature* introduced a fabric that could also effectively do this. The authors of the *Nature* study developed a fiber that includes a piezoelectric substance—which yields an electric signal when bent or mechanically deformed—along with components to enhance the vibratory response to sound. Combining the fiber with conventional yarns could produce washable and wearable fabrics capable of capturing sounds with many possible uses. For example, garments could be customized to monitor aspects of the wearer's breathing or heartbeat or to determine the direction of a sudden sound. The new fibers can also be made to produce sound, so they might someday find use in garments that can serve as hearing aids or communications devices.

Another *Nature* paper, in the Feb. 3 issue, reported on a new material that not only is as light as plastic and stronger than steel but also can be readily manufactured in large quantities. One-dimensional polymers—lengthy chains of repeating smaller molecular units called monomers—are very common. Examples include DNA and proteins, and one-dimensional polymers can be shaped into plastics. Linking monomers in two dimensions to form sheets was long believed unlikely at a reasonable cost, and efforts to achieve this feat met a variety of practical obstacles—until now.

Organ Transplants From Pigs

The demand for human donor organs for lifesaving transplants far exceeds the supply. One much-discussed theoretical solution is

xenotransplantation—the use of organs across species. But organs of the right size and functionality must be obtained, they need to be free of disease, and the risk of rejection by the patient's immune system has to be overcome. Also, ensuring the safety and reliability of xenotransplantation requires experimenting on humans, raising ethical concerns. Pigs have advantages as donors: they are abundant, with organs that are similar to humans' in shape and size, and because they are not as closely related as nonhuman primates, like monkeys, they may be less likely to carry microbes harmful to us. Perhaps most importantly, their genomes can now be readily edited to help reduce the risk of rejection.

In late 2021 and early 2022, three U.S. medical teams undertook transplant procedures on humans using pig organs. Two of the teams implanted genetically modified pig kidneys in brain-dead recipients. The kidneys functioned with no apparent immune-system rejection for the duration of the trials, a few days. The cases were described in papers in the Apr. 2022 issue of the *American Journal of Transplantation* and the May 19 issue of the *New England Journal of Medicine* (NEJM). The third team reported in the NEJM issue of July 7 on the transplantation of a genetically modified pig heart in a 57-year-old man with heart failure; the man was nearing death and was not accepted as a candidate for a human heart. He died two months after the transplant procedure. Preliminary findings suggested that a virus later detected in the pig heart may have played a role in the patient's death.

Picturing the Universe

Several studies in a special issue of *Astrophysical Journal Letters* May 12, 2022, presented the first image of the supermassive black hole closest to Earth (27,000 light-years away): Sagittarius A*, which lies at the center of the Milky Way galaxy and has a mass 4 million times that of the sun. The Event Horizon Telescope Collaboration, a global network of radio telescopes, collated years of observational data to create the image, which shows the black hole as a faint silhouette surrounded by glowing, turbulent material.

In July 2022 the National Aeronautics and Space Administration (NASA) began releasing the initial color images from the James Webb Space Telescope, launched in late 2021 as the successor to the celebrated Hubble Space Telescope. Webb's first pictures included the deepest and sharpest infrared image of the remote universe yet produced: a view of the galaxy cluster SMACS 0723 with some of the most distant galaxies ever detected as they appeared 4.6 billion years ago.

Meanwhile, new discoveries of planets beyond our solar system continued. NASA announced in Mar. 2022 that the latest finds had pushed the total number of known exoplanets past 5,000. NASA counts only discoveries that have been presented in peer-reviewed, scientific papers and have been confirmed by multiple detection methods or by analytical techniques. Among the candidate planets reported this year was one described in the Aug. 1 issue of *Astrophysical Journal Letters*. Located just 395 light-years away, it appears to be still in the process of formation and its estimated age of just 1.5 million years, if confirmed, would make it one of the youngest planets ever found.

Plants: Big, Bizarre

On the botany front, scientists revealed a new contender for the title of world's largest living organism. Their candidate, presented in a paper published in the June 8, 2022, issue of *Proceedings of the Royal Society B: Biological Sciences*, is a type of seagrass occupying some 77 sq mi (200 sq km) of Western Australia's Shark Bay. Known as Poseidon's ribbon weed, or *Posidonia australis*, the Shark Bay plant is believed to be as old as 4,500 years. While searching for genetic differences in ribbon weed, researchers found that samples taken at great distances from one another came from a single plant, expanding at an estimated rate of 6-14 in. (15-35 cm) a year through cloning. This seagrass appears to be a hybrid of two species as well as a polyploid organism, meaning that its cells carry multiple complete sets of chromosomes. (Humans, whose cells generally possess two sets of chromosomes, are diploids.) The extra

genes and cloning process may enhance the plant's hardiness and adaptability to new environments.

Genetics also played a key role in a paper published in the journal *Cell*'s Sept. 30, 2021, issue. The research shed new light on parasitism. Specifically, it explained how the mustard plant *Arabidopsis thaliana*, when infected by bacteria known as phytoplasmas, gains longevity while growing into weird shapes. The plant, locked in adolescence, continues to provide a haven for the parasites to multiply while attracting the sap-sucking insects that spread the bacteria to new hosts. The *Cell* paper showed that some of the changes in the plant are produced by a certain protein, called SAP05, in the phytoplasma. SAP05 blocks plant proteins that govern the expression of genes involved in development.

Ancient Urban Sprawl in Amazonia

Experts once assumed some Native American peoples, in past millennia, built highly complex societies but not urban areas in the Amazon region of South America. A paper published in the June 9, 2022, issue of the journal *Nature* drew a quite different picture. It reported remains of an agricultural and low-density urban landscape on seasonally flooded savanna terrain in what is now Bolivia. Archaeologists first learned of mounds in the area more than a century ago, but the tropical environment made investigation difficult. The new research utilized helicopter-borne lidar—which measures distances with laser pulses—to map the outlines of ground-level structures. Digital techniques were then used to “remove” the lush vegetative cover from the map. The researchers uncovered massive ruins featuring monumental structures, two large settlement sites (surrounded by defensive walls and a moat), and 24 smaller sites, along with interconnecting canals, reservoirs, and straight, raised causeways. All this was the work of the so-called Casarabe culture, which existed between the years 500 and 1400. The researchers believed it covered approximately 1,737 sq mi (4,500 sq km), with one of the large settlement sites controlling about 193 sq mi (500 sq km). The “apparent diversity in sociopolitical organization, water-control systems, and economic bases” represented a form of large-

scale, pre-Columbian urban sprawl previously unknown in South America's tropical lowlands.

New Step Toward Quantum Computing

Hopes for the development of quantum computers, capable of solving problems too complex for classical computers, seemed to come a step closer to realization with an achievement reported in the June 23, 2022, issue of *Nature*. A team of Australian scientists built—in silicon at the atomic scale—a simple version of a classical computer chip's transistor-based integrated circuitry. This first quantum integrated circuit was designed specifically to simulate polyacetylene, a compound consisting of a chain of repeating atoms, mimicking its structure and energy states. Scientists can use such simulations to better understand a molecule's behavior. Classical computers are capable of modeling only the simplest molecules. For example, a classical computer would need 1,086 transistors to simulate a penicillin molecule, which has 41 atoms. A quantum processor could do the job with 286 qubits (quantum bits, the quantum counterpart to the bits of a classical computer). The Australian team previously created the first quantum transistor, in 2012. With the precision placement of atoms in their integrated circuit, they showed a trailblazing ability to engineer matter at the atomic scale.

Science Glossary

This glossary covers some concepts that come up frequently in the news, in biology, chemistry, geology, and physics.

Biology

Amino acid: any of a group of organic molecules with a certain structure. About 20 are the building blocks of proteins.

Antibiotic: a substance produced by or derived from a bacterium, fungus, or other organism that battles infections and diseases caused by microorganisms, especially bacteria; it works by killing the microorganism or halting its growth.

Archaeon (plural, archaea): one of a group of single-celled microorganisms; archaea are prokaryotes, like bacteria, but they share some similarities with eukaryotes.

Autoimmunity: a condition in which an individual's immune system reacts against his or her own tissues; leads to diseases such as lupus, some forms of diabetes, inflammatory bowel disease, and rheumatoid arthritis.

Bacterium (plural, bacteria): one of a large, varied class of microscopic and simple, single-celled organisms. Bacteria live almost everywhere; some forms cause disease, while others are useful in digestion and other natural processes.

Biodiversity (biological diversity): richness of variety of life-forms—including plants, animals, and other types—in a given environment.

Cell: the smallest unit of life capable of living independently, or with other cells; usually bounded by a membrane. May include a nucleus and other specialized parts.

Cholesterol: a fatty substance in animal tissues. It is produced by the liver in humans; is found in foods such as butter, eggs, and meat; and is an essential body constituent.

Chromosome: one of the rod-like structures in cell nuclei that carry genetic material (DNA).

Cloning: the process of copying a particular piece of DNA to allow it to be sequenced, studied, or used in some other way; can also refer to producing a genetic copy of an organism.

CRISPR (Clustered Regularly Interspaced Short Palindromic Repeats): a segment of DNA in prokaryotes that helps defend against virus attacks; it contains short genetic sequences that, coupled with a special enzyme, permit recognition and cleavage of like sequences in invading viruses. Term is also applied to a technology based on this approach that provides relatively precise targeting of specific bits of genetic code for such purposes as genetic modification or diagnosis.

DNA (deoxyribonucleic acid): a usually double-stranded molecule that carries genetic information, which determines the form and functioning of all known living things.

Ecosystem: an interdependent community of living organisms and their climatic and geographical habitat.

Enzyme: a protein that promotes a particular chemical reaction in the body.

Estrogen: one of a group of hormones that promote development of female secondary sex characteristics and the growth and health of the female reproductive system; males also produce small amounts of estrogen.

Eukaryote: any of the group of single- or multi-celled organisms whose cells have distinct nuclei.

Evolution: the process of gradual change that can occur in a species as it adapts to its environment; natural selection is the process by which evolution occurs.

Gene: a portion of a DNA molecule that provides the blueprint for the assembly of a protein.

Gene pool: the collection and total diversity of genes in an interbreeding population.

Gene therapy: a treatment in which scientists try to implant functioning genes into a person's cells so the genes can produce proteins that the person lacks or that help the person fight disease.

Genetic sequencing: the process of finding the order of subunits in a gene or the order of all an organism's genes.

Genome: the complete set of an organism's genetic material.

Hormone: a substance secreted in one part of an organism that regulates the functioning of other tissues or organs.

Meiosis: the process of cell division that results in gametes (sperm or egg cells), all of which contain half the number of chromosomes as their precursor.

Metabolism: the sum total of the body's chemical processes providing energy for vital functions and enabling new material to be synthesized.

Mitosis: the process by which a cell divides its nucleus and other cell materials into two duplicate daughter cells with the same DNA.

Neuron or **nerve cell:** any of the cells in the nervous system that send electrical and chemical messages to other cells.

Nucleus (plural, nuclei): the center of an atom; or the portion of a eukaryotic cell that contains most of the cell's genetic material. (In most eukaryotic cells, some DNA is also found in the cell's "powerhouses"—tiny components called **mitochondria** that lie outside the nucleus and supply chemical energy.)

Organism: a living entity, capable of growth, metabolism, and usually reproduction.

Phenotype: the observable properties and characteristics of an organism arising at least in part from its genetic makeup.

Pheromone: a chemical secreted by an organism to influence the behavior of other members of its species.

Placebo effect: a phenomenon in which patients show improvements even though they have taken a medically inactive substance, called a placebo.

Prokaryote: a single-celled organism that does not have a distinct nucleus, such as a bacterium or archaeon.

Protein: a complex molecule made up of one or more chains of amino acids; essential to the structure and function of all cells.

RNA (ribonucleic acid): a complex molecule similar to the genetic material DNA but usually single-stranded; several forms of RNA translate the genetic code of DNA and use that code to assemble proteins for structural and biological functions in the body. RNA also serves as the genetic material of some viruses.

Species: a population of organisms that breed with each other in nature and produce fertile offspring; other definitions of species

exist to accommodate the diversity of life on Earth.

Stem cell: a cell that can develop into other types of cells; for instance, stem cells in bone marrow can differentiate into different types of blood cells.

Steroid: a type of chemical substance with a certain molecular structure. Some steroids are hormones that can suppress immune response or influence stress reaction, blood pressure, or sexual development.

Testosterone: a steroid hormone that stimulates the development and maintenance of male sexual characteristics and the production of sperm; women also produce small amounts of testosterone.

Virus: a microscopic, often disease-causing, agent made of genetic material surrounded by a protein shell; can only reproduce inside a living cell. There also exist “subviral” infectious agents, such as **viroids** (which consist of a short, circular strand of RNA without a protein coat) and **prions** (consisting of protein material).

Chemistry

Acid: a class of compounds that contrasts with bases. Acids taste sour, turn litmus red/pink, and often produce hydrogen gas in contact with some metals. Acids donate protons (hydrogen atoms minus the electron) in chemical reactions.

Base: a substance that yields hydroxyl ions (OH⁻) when dissolved in water; any of a class of compounds whose aqueous solutions taste bitter, feel slippery, turn litmus blue, and react with acids to form salts; also known as **alkaline**.

Carbon fiber: an extremely strong, thin fiber made by pyrolyzing (decomposing by heat) synthetic fibers, such as rayon, until charred; used to make high-strength composites.

Chlorofluorocarbon (CFC): one of a group of industrial chemicals that contain chlorine, fluorine, and carbon and can damage Earth's ozone layer.

Element: a substance that cannot be chemically decomposed into simpler substances; all the atoms of an element have the same number of protons.

Isotope: an atom of a chemical element with the same number of protons in its nucleus as other atoms of that element, but with a different number of neutrons.

Molecule: the basic unit of a chemical compound, composed of two or more atoms bound together.

Noble gases or **inert gases:** a group of gases including helium, neon, argon, krypton, xenon, and radon that are not reactive except in rare and limited instances.

Osmosis: the transfer of a fluid across a semipermeable membrane, usually from an area of higher concentration to one of lower concentration.

Polymer: a huge molecule containing hundreds or thousands of smaller molecules arranged in repeating units.

Salt: a neutral compound produced by the reaction of an acid and a base.

Geology

Anthropocene: a proposed epoch of geologic time marked by a significant influence of human activity on the environment. Suggested starting points include the mid-20th century (when extensive testing of nuclear and thermonuclear bombs began) and the Industrial Revolution of the 19th century.

Fault, tectonic: a crack or break in Earth's crust, often due to the slippage of tectonic plates past or over one another; usually geologically unstable.

Igneous: a type of rock formed by solidification from a molten state, especially from molten magma.

Magma: hot liquid rock material under Earth's surface, from which igneous rock is formed by cooling.

Metamorphic: in geology, the name given to rocks or minerals that have recrystallized under the influence of heat and pressure since their original formation.

Pangaea: a single supercontinent that scientists believe began to break apart at least 200 mil years ago to form the current continents.

Plate tectonics: theory that Earth's lithosphere—the uppermost layer that includes the crust—is made up of many separate rigid plates of rock that float on top of hot semi-liquid rock.

Sedimentary: a type of rock formed by the buildup of material at the bottoms of bodies of water.

Physics

Absolute zero: the theoretical temperature at which all motion within a molecule stops, corresponding to -273.15°C (-459.67°F).

Antimatter: matter that consists of antiparticles, such as antiprotons, that have an opposite charge from normal particles; when matter meets antimatter, both are destroyed, and their combined mass is converted to energy. Antimatter is created in certain radioactive decay processes but appears to be present in only small amounts in the universe.

Atom: the basic unit of a chemical element.

Atomic mass: the total mass of an atom of a given element; atoms of the same element with different atomic masses (different numbers of neutrons but not protons) are called **isotopes**.

Atomic number: the number of protons in an atom of a given element of the periodic table; the characteristic that sets atoms of different elements apart.

Axion: a hypothetical subatomic particle with low mass and energy that has been proposed to exist because of the properties of the strong nuclear force. Axions have been suggested as a

candidate for dark matter and also as a possible explanation for the imbalance between matter and antimatter in the universe.

Bose-Einstein condensate (BEC): a “super-atom” comprising thousands of atoms super-cooled to within a few hundred millionths of a degree of absolute zero and thus condensed into the lowest energy state. Atoms bound in the BEC behave synchronously, giving the BEC wavelike properties.

Boson: one of the two primary categories of particles in the Standard Model; bosons include the Higgs boson and force-carrying particles such as photons, gluons, and the W and Z particles.

Dark energy: a mysterious, undefined energy leading to a repulsive force pervading all of space-time; proposed by cosmologists as counteracting gravity and accelerating the expansion of the universe; predicted to make up 68.3% of the universe’s composition.

Dark matter: hypothetical, invisible matter that some scientists believe makes up 26.8% of the universe (dark matter and ordinary matter together make up 31.7% of the universe). Its existence was proposed to account for otherwise inexplicable gravitational forces observed in space.

Doppler effect: a change in the frequency of sound, light, or radio waves caused by the motion of the source emitting the waves or the motion of the person or instrument perceiving the waves.

Electron: negatively charged particle that (along with its positively charged counterpart, the **positron**) is the least massive electrically charged fundamental particle; one of six **leptons**.

Energy: capacity to perform work. Energy can take various forms, such as potential energy, kinetic energy, and chemical energy.

Entropy: a measure of disorder in a system.

Fermion: any one of a number of matter particles including electrons, protons, neutrons, neutrinos, leptons, and quarks;

one of the two primary categories of particles in the Standard Model, the other being bosons.

Field: the existence of physical effects such as forces (gravitational, electric, etc.) is visualized and described mathematically by physicists in terms of fields, which show the strength and direction of a force at a given position.

Fission: a nuclear reaction that occurs when the nuclei of large, unstable atoms break apart, releasing large amounts of energy.

Fluorescence: luminescence that is caused by the absorption of radiation at one wavelength followed by an almost immediate re-radiation, usually at a different wavelength, that stops almost immediately when the causative radiation stops.

Force: in classical physics, something that causes acceleration in a body; can be thought of as a push or pull.

Fusion: a nuclear reaction occurring when light atomic nuclei collide at high temperatures and combine to form one heavier atomic nucleus, releasing a large amount of energy along with, possibly, a subatomic particle in the process.

Gravity: an attractive force between any two objects or particles, proportional to the mass (or energy) of the objects; strength of the force decreases with greater distance; the only fundamental force still unaccounted for by the Standard Model.

Half-life: the time it takes for half of a given amount of a radioactive element to decay.

Hertz (Hz): a measure of frequency, or how many times a given event occurs per second; applied to sound waves, electrical current, and microchip clock speeds.

Higgs boson: a boson associated with a field accounting for the existence of mass in many particles.

Laser: light consisting of a cascade of photons all having the same wavelength; stands for Light Amplification by Stimulated Emission of Radiation.

Light-emitting diode (LED): a semiconductor that emits light when an electrical current is passed through it. The color of the light depends on the material used in making the diode.

Neutrino: a tiny fundamental particle, classed as a fermion, with no electrical charge and very small mass. Neutrinos move very quickly through the universe; they come in three varieties, or flavors, called electron, muon, and tau.

Neutron: a neutral particle, made up of quarks, found in the nuclei of atoms (except the most common isotope of hydrogen).

Particle accelerator: a machine that accelerates charged particles to extremely high speeds around a circular track or along a straight line. Accelerators are used in scientific research, manufacturing, and medical diagnosis and therapy. Those used to study fundamental physics can be enormous—the Large Hadron Collider in Switzerland has a circumference of 16.8 mi (27 km).

Phosphorescence: luminescence that is caused by the absorption of radiation at one wavelength followed by a delayed re-radiation, usually at a different wavelength, that continues for a time after the causative radiation stops.

Photon: the elementary unit, or quantum, of electromagnetic radiation, such as light. It has no mass or electrical charge and is one of the fundamental force-carrying particles described by the Standard Model.

Plasma: a high-energy state of matter different from solid, liquid, or gas in which atomic nuclei and the electrons orbiting them separate from each other.

Proton: a positively charged subatomic particle, made up of quarks, found in the nuclei of atoms.

Quantum: a natural unit of some physically measurable property, such as energy or electrical charge.

Quark: a fundamental matter particle classed as a fermion; there are six different varieties, or flavors, of quarks grouped in pairs:

up and down, charm and strange, top and bottom. Each flavor has a corresponding antiquark. Quarks combine to form such particles as neutrons and protons. Quark-antiquark combinations form the composite particles known as mesons.

Radiation: energy emitted as rays or particles. Radiation includes heat, light, ultraviolet rays, gamma rays, X-rays, cosmic rays, alpha particles, and beta particles.

Relativity, general theory of: a theory of space-time proposed by Albert Einstein in 1915; it links gravity to the curvature of space-time.

Relativity, special theory of: Albert Einstein's theory of space and time: all laws of physics are valid in all uniformly moving frames of reference, and the speed of light in a vacuum is always the same, so long as the source and the observer are moving uniformly (not accelerating).

Standard Model: prevailing theory of the interaction of subatomic particles. Particles are either fermions—such as electrons, neutrinos, and quarks—or bosons—such as Higgs bosons, gluons, W or Z bosons, and photons. The theory successfully explains three of the four elementary forces acting on particles (strong, weak, electromagnetic) but thus far has not incorporated gravity.

String theory: a theory that seeks to unify quantum mechanics and general relativity, positing that the basic constituents of matter can best be understood not as pointlike particles but as tiny oscillating “strings.”

Subatomic particle: a particle smaller than an atom; three important types—proton, neutron, and electron—are found in most atoms.

Superconductivity: the property of certain materials, usually metals and chemically complex ceramics, to conduct electricity without resistance, generally at very cold temperatures.

Thermodynamics: the branch of physics studying the flow and transformation of heat and other forms of energy, often with a

focus on temperature.

Ultraviolet radiation: a form of light, invisible to the human eye, that has a shorter wavelength and greater energy than visible light but a longer wavelength and less energy than X-rays.

Virtual particle: subatomic particles that rapidly pop into and out of existence and can exert real forces; usually occur in particle-antiparticle pairs and are rapidly annihilated.

Mohs Scale of Hardness

Hardness is the ability of a solid substance to resist abrasion or deformation on its surface. Soft minerals scratch more easily than hard ones. For example, a diamond will scratch graphite because graphite is softer. In 1812, German mineralogist Frederick Mohs (1773-1839) created the arbitrary scale shown below to measure relative hardness using 10 minerals that were readily available at that time. The numbers in the Mohs scale are arranged in order of increasing hardness. An item's hardness is obtained by determining which mineral in the Mohs scale can scratch it.

Mohs scale

1	Talc
2	Gypsum
3	Calcite
4	Fluorite
5	Apatite
6	Orthoclase feldspar
7	Quartz
8	Topaz
9	Corundum
10	Diamond

Selected items and their relative hardness

2.5	Fingernail
2.5-3	Gold, silver
3	Copper penny

4-	Platinum
4.5	
4-5	Iron
5.5	Steel knife blade
6-7	Glass
6.5	Iron pyrite
7+	Hardened steel file

Note: Atomic weight shown is a weighted average of the atomic masses of normally found isotopes. * = Element has no stable nuclides. A value enclosed in brackets, e.g. [209], indicates the mass number of the longest-lived isotope of the element. However, four such elements (Bi, Th, Pa, and U) do have a characteristic terrestrial isotopic composition, and for these an atomic weight is tabulated. (1) For elements having two or more stable isotopes with a notable variation in atomic-weight values, a range is shown.

Basic Laws of Physics

Newton's Laws of Motion

1. An object in motion moves at a constant velocity in a straight line unless acted upon by a force. Likewise, an object at rest will stay at rest. These two properties are known as inertia.

2. The acceleration of an object is proportional to the force acting on it and inversely proportional to the mass of the object. Force (*F*) equals mass (*m*) times acceleration (*a*):

$$F = ma$$

3. For every action, there is an equal and opposite reaction. For example, if a force of one ton pushes down on an object, the object pushes up with an equal force. As per the second law, the amount of movement (acceleration) produced in the object will depend on the object's mass.

Law of Gravity

In common usage, gravity refers to the gravitational force between planets and objects on or near them. But in scientific parlance, gravitation is one of four basic forces controlling the interactions of matter. (The others are the strong and weak forces, which act on the subatomic level, and the electromagnetic force.) The gravitational force (F) between objects is proportional to the product of their masses (m_1 and m_2) and inversely proportional to the square of the distance (d) between them. G represents the gravitational constant in Newton's law of gravity, a fixed ratio of approximately 6.67408×10^{-11} newton m^2/kg^2 .

The basic law of gravity is:

$$F = G \frac{m_1 m_2}{d^2}$$

Near Earth's surface, Earth's gravitational force pulls objects downward at a constant acceleration of 9.8 m/s^2 (g). This allows calculation of the vertical velocity (v) of an object with an initial vertical velocity of v_0 in free fall at a given point in time (t) and calculation of the distance (d) of an object from Earth at any given time with a given initial velocity (v_0) and a known initial height (a) via the following equations (here, the effects of air resistance are ignored, and downward velocities and directions are negative):

$$v = v_0 - gt$$

$$d = -\frac{1}{2}gt^2 + v_0t + a$$

Assuming that height is measured in feet and speeds in feet per second, the maximum height (H) reached by an object with a positive (upward) initial velocity is expressed as:

$$H = a + \frac{v_0^2}{64}$$

For motion not near Earth's surface, more complicated equations are required. Also, if the object's upward velocity is very great, the object may escape Earth's gravity. Even near Earth's surface, there are slight complications. Gravity is lessened by the centrifugal force of the Earth's rotation. At the poles, where centrifugal force is absent, acceleration due to gravity is greater.

Gravity is weaker on a mountaintop than at sea level because the mountaintop is farther from Earth's center.

Conservation Laws

In physics, laws of conservation state that in a closed system, where neither mass nor energy is added or subtracted, certain measurable quantities remain constant.

Conservation of Mass: Mass is neither created nor destroyed within a closed system except when converted from or to energy.

Conservation of Momentum: All moving objects have momentum, and in a closed system, total momentum is always conserved. Linear momentum is the product of the mass of an object and its velocity. In the following equation, M and V represent the initial total mass and velocity of objects within a closed system. After a collision between those objects, the mass and velocity of individual objects may change (for example, one object breaks into smaller pieces, each traveling at a different velocity), but the product of the total mass and velocity in the system after the collision (mv) will remain the same.

$$MV = mv$$

Any object moving in a circle has another kind of momentum—angular momentum. This is because circular motion requires acceleration toward the center of the circle. The amount of acceleration depends on the speed of the object and the square of the radius of the circle. (Angular momentum is the product of this speed, the mass of the object, and the square of the radius.)

Conservation of Energy: The total amount of energy in a closed system will not change except when converted from or to mass.

Conservation of Mass-Energy: Although mass and energy can be converted into one another, the total amount of mass and energy together must be conserved. This is reflected in Einstein's famous equation, where m is mass, E is energy, and c is the speed of light in a vacuum (which is constant):

$$E = mc^2$$

Relativistic mass can describe how mass increases with velocity. The following equation—where m is the mass of a moving object, m_0

is the object's mass when not moving, v is the object's velocity in relation to a stationary observer, and c is the speed of light—shows the relationship:

$$m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}}$$

The theory that no object can travel faster than the speed of light is based in this equation. As an object approaches c , so much energy is converted to mass that it no longer accelerates.

Laws of Thermodynamics

1. Heat is a form of energy. Within a closed system energy must be conserved except in nuclear reactions or other extreme conditions. It is neither created nor destroyed.
2. Within a self-sustaining system, heat can never go from an area of low temperature to an area of high temperature, for that would require added energy. Without added energy, disorder, or entropy, can only increase.
3. Absolute zero cannot be attained by any procedure in a finite number of steps. Although it can be approached asymptotically, it can never be reached.

Laws of Current Electricity

Electric current generally represents the flow of electrons through a conductor. The rate at which electrons flow can be measured in amperes, defined as the number of electrons (measured in a unit called the coulomb, equal to about 6.24 quintillion or 6.24×10^{18} electrons) moving past a particular point every second. One ampere is equal to 1 coulomb of charge passing each second. Like water, electrons tend to move from areas of high pressure to low pressure. The difference between these two pressures, known as potential difference, is measured in volts.

Certain substances, such as copper and carbon, allow electric currents to pass more readily than others—that is, they have greater conductivity. Resistance to conductivity is measured in ohms.

Ohm's Law: Electric current is directly proportional to the potential difference and inversely proportional to the total resistance of the circuit. I is electric current (measured in amperes), V is the potential difference (measured in volts), and R is resistance (measured in ohms):

$$I = \frac{V}{R}$$

Law of Electric Power: Electric power (P), measured in watts, represents the rate at which electricity is converted into some other form of energy (such as light, in the case of a lightbulb). For a direct-current circuit, P is the product of current and potential difference:

$$P = IV$$

Two Basic Laws of Quantum Physics

1. Heisenberg's uncertainty principle: Certain pairs of observable quantities like energy and time or position and momentum cannot be measured with complete accuracy simultaneously. Also known as the indeterminacy principle.

2. Pauli's exclusion principle: Two electrons in an atom cannot simultaneously occupy the same quantum or energy state. This has since been shown to be true also for other types of the subatomic particles known as fermions.

Breaking the Sound Barrier; Speed of Sound

The prefix **Mach** is used to describe supersonic speed. It was named for Ernst Mach (1838-1916), a Czech-born Austrian physicist. Mach may be defined as the ratio of the velocity of an object to the velocity of sound in a particular medium. A plane moving at the speed of sound moves at Mach 1. At twice the speed of sound, it moves at Mach 2.

When a plane passes the sound barrier—that is, flies faster than the speed at which sound travels—people in the area, though not the people on the plane, hear what seem to be thunderclaps. These sounds are sometimes called sonic booms.

Sound is produced by vibrations of an object. It is transmitted by the alternating increase and decrease in pressure that radiates

outward from a source through a material medium of molecules, like waves spreading out on a pond after a rock has been tossed in.

The **frequency of sound** is determined by the number of times the vibrating waves undulate per second. It is measured in cycles per second. The slower the cycle of waves, the lower the frequency. As the frequency increases, the sound becomes higher in pitch. The human ear is sensitive to frequencies between 20 and 20,000 vibrations per second, although this range varies among individuals and decreases with age.

Intensity, or loudness, is the strength of the pressure of these radiating waves and is measured in decibels (dB).

The **speed of sound** varies depending on temperature and the medium through which it travels. It moves faster in water than in air, for example. At sea level and a temperature of 59°F (15°C), the speed of sound is approximately 761 mph, or 1,100 ft per sec.

Light and Colors of the Spectrum

Light, a form of electromagnetic radiation similar to radiant heat, radio waves, and X-rays, is emitted from a source in straight lines and spreads in area as it travels. For emission from a point source, light per unit area diminishes in proportion to the square of the distance.

The English mathematician and physicist Isaac Newton (1642-1727) described light as an **emission of particles**; the Dutch astronomer, mathematician, and physicist Christiaan Huygens (1629-95) and others developed the theory that light travels in a **wave motion**. It is now believed that these two theories are essentially complementary. The development of quantum theory has led to results where light acts like a series of particles in some experiments and like a wave in others.

The first relatively accurate measurement of the **speed of light** was made by French physicist Armand Hippolyte Louis Fizeau (1819-96). Today the speed of light is known precisely as 299,792.458 km per sec (or 186,282.397 mi/sec) in a vacuum. In water the speed of light is about 25% less, and in glass, 33% less.

Color sensations are produced through the excitation of the retina of the eye by light vibrating at different frequencies. The different colors of the visible spectrum may be seen by viewing light refracted by passage through a prism, which separates light into its component wavelengths.

Customarily, the basic colors are taken to be the six monochromatic (single) colors that occupy relatively large areas of the spectrum: red, orange, yellow, green, blue, and violet. So-called primary colors can be combined to produce the sensation of other colors. However, scientists disagree about how many and what primary colors to recognize. The color sensation of **black** is due to complete lack of stimulation of the retina, that of **white** to complete stimulation.

Infrared and **ultraviolet rays**, which are below the red (long) end and above the violet (short) end of the visible spectrum, respectively, are invisible to the naked human eye. Heat is the principal effect of

infrared rays, and chemical action that of ultraviolet rays. Some animals can see infrared or ultraviolet light.

Life Cycles of Selected Animals

Information reviewed by Ronald M. Nowak, author of *Walker's Mammals of the World* (6th ed., Johns Hopkins University Press, 1999). Average longevity figures supplied by Ronald T. Reuther. These apply to animals in captivity; the potential life span of animals is rarely attained in nature. Figures on gestation and incubation are averages based on estimates.

Animal	Gestation (days)	Average longevity (yrs.)	Maximum longevity (yrs.-mos.)
Ass	365	12	47
Baboon	187	20	45
Bear (black)	219	18	36-10
Bear (grizzly)	225	25	50
Bear (polar)	240	20	45

Goose			30
Pigeon			18
Turkey			26

Geologic Time Scale

Our understanding of Earth's ancient history is largely a result of geoscientists' study of climate, rock strata, ice samples, mineral deposits, and fossils from around the world; clues to the planet's origin have also been found through the study of extraterrestrial bodies. Geologists divide Earth's history into the following units (MYA = million years ago):

PRECAMBRIAN TIME (4,600-541 MYA)

HADEAN EON (4,600-4,000 MYA) Earth initially has no continents, oceans, or life; surface conditions are defined by intense volcanic activity and widespread meteorite impact. Oldest known minerals and rocks, many of meteoric origin, date to this eon, which may also have seen the first appearance of life.

ARCHEAN EON (4,000-2,500 MYA) Earth's surface cools and water vapor in atmosphere condenses to form early oceans, which define small protocontinents; there is substantial evidence for the existence of single-celled organisms, bacteria and archaea, in these oceans.

PROTEROZOIC EON (2,500-541 MYA) Protocontinents merge into larger landmasses as Earth's crust continues to shift. Atmospheric oxygen levels increase, and first known multicellular life appears. Later, soft-bodied marine animals emerge.

PHANEROZOIC EON (541 MYA-present)

Paleozoic Era (541-252 MYA)

Cambrian Period (541-485 MYA). The supercontinent known as Gondwana, or Gondwanaland, dominates the Southern Hemisphere. Seas experience an explosion of invertebrate animal life, including thousands of species of trilobites; the first known vertebrates appear. There is no life on land.

Ordovician Period (485-444 MYA). Gondwanaland extends from South Pole to tropic regions; Northern Hemisphere is mostly open ocean. Average global temperatures are warmer than in the current era. First primitive land plants, early ancestors of starfish and mollusks, and first armored, jawless fishes appear. The period ends in mass extinction of a majority of species, possibly a result of a global drop in sea level due to glaciation.

Silurian Period (444-419 MYA). South Pole remains covered by supercontinent, but precursors of present-day N America, Europe, and Asia coalesce around the equator and middle latitudes. Appearance of first known vascular land plants, first freshwater fish, first jawed fish, first coral reefs, and first air-

breathing animals (certain eurypterids, also called sea scorpions, largest known arthropods).

Devonian Period (419-359 MYA). Collisions between Gondwanaland and ancestral landmasses of N America and Eurasia produce mountains visible today as northern Appalachians. Newly-formed ozone layer offers protection from sun's rays, allowing first air-breathing spiders and mites to appear on dry land. Fish with fins and scales and first amphibians emerge. Late Devonian mass extinction.

Carboniferous Period (359-299 MYA). Precursors of modern N America and Northern Europe lie in tropical latitudes N of the equator; warm and humid conditions there facilitate spread of lush forests and peat swamps that later form most of the world's coal and limestone. Later period sees emergence of first true conifers, *Lepidodendrales* ("scale trees") as tall as 100 ft, and first true reptiles.

Permian Period (299-252 MYA). All major landmasses collide to form the supercontinent Pangaea, surrounded by the world ocean Panthalassa. Gradual warming through much of the Permian allows for initial flourishing of species, including dinosaur precursors (up to 10 ft long) and marine species in shallow inland seas. The period ended with the largest of Earth's five mass extinctions. As much as 95% of all marine species and most land species went extinct in the event, which was likely caused by increased greenhouse gases in atmosphere.

Mesozoic Era (252-66 MYA)

Triassic Period (252-201 MYA). Pangaea separates into supercontinents of Laurasia and Gondwana; subtropical conditions extend as far N as present-day Wyoming and New England. Emergence of ichthyosaurs and plesiosaurs (large marine reptiles), several species of dinosaurs (up to 15 ft long), first true mammals, and first insects to undergo metamorphosis from larva to pupa to adult. Triassic-Jurassic mass extinction.

Jurassic Period (201-145 MYA). N American continent drifts westward, opening Gulf of Mexico; rift forms between S America and Africa. Warm, moist climate contributes to flourishing of coral reefs and temperate and subtropical forests. Appearance of first angiosperms (flowering plants), pterosaurs (winged reptiles), the earliest known birds (offshoots of a dinosaur group), and huge dinosaurs such as the carnivorous *Allosaurus* and herbivorous *Apatosaurus*.

Cretaceous Period (145-66 MYA). African continental plate drifts N, creating roots of European Alps; gap between S America and Africa broadens; western movement of N America drives formation of Sierra Nevada and Rocky Mountains, turning the western interior of continent into a vast swamp. Later, sea levels rise and cover about one-third of Earth's present land area. The global climate is warm and mild. The period ends in a mass extinction of plant and animal species (including dinosaurs). Likely causes include an asteroid impact and increased volcanic activity.

Cenozoic Era (66 MYA-present)

Paleogene Period (66-23 MYA)

- Paleocene Epoch (66-56 MYA). Australia begins to separate from Antarctica; N America and Greenland begin to spread apart. Mammalian life predominates, including early marsupials, insectivores, creodonts (carnivorous relatives of cats and dogs), and primitive hoofed mammals.
- Eocene Epoch (56-33.9 MYA). Australia drifts farther from Antarctica; the Indian subcontinent becomes welded to Asia, and tectonic forces drive the upheaval of the Alpine-Himalayan system. Climate in N America and Europe is subtropical and moist, with temperate forests as far N as Greenland and Siberia. Ancestors of modern horses, elephants, rhinoceroses, camels, bats, primates, and squirrel-like rodents emerge; earliest known marine mammals appear in later Eocene.
- Oligocene Epoch (33.9-23 MYA). San Andreas fault develops between N American and Pacific plates. Mammalian species

continue to diversify, producing modern horse and multiple rodent, camel, and rhinoceros-like species, as well as first known species of great ape. Long-term cooling trend begins that would later cause Pleistocene ice ages.

Neogene Period (23-2.6 MYA)

- Miocene Epoch (23-5.3 MYA). Crustal plate collisions continue to drive uplift of Alps, Himalayas, and Cordilleran Ranges in Americas; eroded sediment is deposited in shallow marine basins, forming reservoirs for oil fields of California, Romania, and Caspian Sea. Ocean currents prevent Antarctica from receiving warmer waters, fostering growth of Antarctic ice sheet. Northern forests become grassy prairies. Large apes related to the orangutan live in Asia and southern Europe. Oldest hominin fossils from Africa date to this epoch.
- Pliocene Epoch (5.3-2.6 MYA). Alps continue to rise in Europe, and subduction of the Pacific tectonic plate elevates the Sierra Nevada and volcanic Cascade Range. Climate becomes cooler and drier, driving formation of permanent Arctic ice cap. Rapid primate evolution produces *Australopithecus*, an early direct ancestor of modern humans (*Homo sapiens*).

Quaternary Period (2.6 MYA-present)

- Pleistocene Epoch (2.6 MYA-11,700 years ago). Glacier ice covers as much as 25% or more of Earth's land surface, carving numerous present-day features including the Great Lakes; increased rainfall in lower latitudes allows plant and animal life to flourish in northern and eastern Africa. Late Pleistocene brings worldwide extinction of many large mammals, including the mastodon, saber-toothed tiger, and ground sloth. Evidence of Neanderthals, Denisovans, and the small archaic humans *Homo floresiensis* and *Homo luzonensis* dates from the latter part of the Pleistocene.
- Holocene Epoch (11,700 years ago-present). Melting ice caused sea levels to rise 100 ft or more in early Holocene, covering large areas of land and extending continental shelf of N America. Humans proliferate, and civilization begins.

Biological Classification

In biology, classification is the identification, naming, and grouping of organisms into a formal system. The two fields that are most directly concerned with classification are taxonomy and systematics. Although they overlap, taxonomy is more concerned with nomenclature (naming) and with constructing hierarchical systems, and systematics with uncovering evolutionary relationships. Two kingdoms of living forms, Plantae and Animalia, have been recognized since Aristotle established the first taxonomy in the 4th century BCE. Plants and animals are examples of eukaryotes; their cells have nuclei bound by membranes. Two other kingdoms of eukaryotes that have been identified are Protista (mostly one-celled organisms) and Fungi. Single-celled bacteria and archaea lack such nuclei. They are referred to as prokaryotes (or procaryotes) and are commonly placed in separate kingdoms. The seven basic categories of classification (from most general to most specific) are kingdom, phylum (or division), class, order, family, genus, and species. (In addition, many scientists group all eukaryotes in a single “domain,” and treat bacteria and archaea as two other domains.) Below are two examples of classification:

ZOOLOGICAL HIERARCHY

Kingdom	Phylum	Class	Order
Animalia	Chordata	Mammalia	Primates

Family	Genus	Species name	Common name
Hominidae	<i>Homo</i>	<i>Homo sapiens</i>	Human

BOTANICAL HIERARCHY

Kingdom	Division*	Class	Order
Plantae	Magnoliophyta	Magnoliopsida	Magnoliales

Family	Genus	Species name	Common name
Magnoliaceae	<i>Magnolia</i>	<i>M. virginiana</i>	Sweet bay

*In botany, the division is generally used in place of the phylum.

Selected Endangered or Threatened Animal Species

Source: Fish and Wildlife Service, U.S. Dept. of the Interior

Common name	Scientific name	Range of concern
Albatross, Amsterdam	Diomedea amsterdamensis	Amsterdam Island, Indian Ocean
Antelope, giant sable	Hippotragus niger variani	Angola
Armadillo, giant	Priodontes maximus	Venezuela and Guyana to Argentina
Bandicoot, desert	Perameles eremiana	Australia
Bat, gray	Myotis grisescens	Central, southeastern U.S.
Bear, grizzly	Ursus arctos horribilis	US (mountain-prairie region)
Bobcat, Mexican	Lynx rufus escuinapae	Mexico
Bumble bee, rusty patched	Bombus affinis	Canada; Eastern, midwestern U.S.
Camel, Bactrian	Camelus bactrianus	Mongolia, China
Caribou, woodland	Rangifer tarandus caribou	Canada, U.S. (ID, WA)
Cheetah	Acinonyx jubatus	Africa to India
Chimpanzee, pygmy	Pan paniscus	Dem. Rep. of the Congo
Condor, California	Gymnogyps californianus	U.S. (AZ, CA, NV, UT), Mexico (Baja California)
Crane, whooping	Grus americana	Canada, central U.S.
Crocodile, American	Crocodylus acutus	US (FL); Caribbean; Central, S America
Dolphin, Chinese river	Lipotes vexillifer	China
Duck, Hawaiian	Anas wyvilliana	U.S. (HI)
Elephant, Asian	Elephas maximus	South-central and southeastern Asia
Fox, northern swift	Vulpes velox hebes	Canada
Frog, mountain yellow-legged	Rana muscosa	U.S. (CA)
Gorilla	Gorilla gorilla	Central and western Africa
Hyena, brown	Parahyaena brunnea	Southern Africa

Impala, black-faced	<i>Aepyceros melampus petersi</i>	Angola, Namibia
Kangaroo, Tasmanian forester	<i>Macropus giganteus tasmaniensis</i>	Australia (Tasmania)
Leopard	<i>Panthera pardus</i>	Central and Southern Africa, Asia
Monkey, spider	<i>Ateles geoffroyi frontatus</i>	Central America
Ocelot	<i>Leopardus pardalis</i>	U.S. (AZ, TX), Mexico; Central, S America
Orangutan	<i>Pongo pygmaeus</i>	Indonesia
Ostrich, West African	<i>Struthio camelus spatzi</i>	Western Sahara
Otter, marine	<i>Lontra felina</i>	Peru south to Straits of Magellan
Panda, giant	<i>Ailuropoda melanoleuca</i>	China
Panther, Florida	<i>Puma concolor coryi</i>	U.S. (FL)
Parrot, imperial	<i>Amazona imperialis</i>	Dominica
Penguin, Galapagos	<i>Spheniscus mendiculus</i>	Ecuador (Galapagos Islands)
Rhinoceros, black	<i>Diceros bicornis</i>	Sub-Saharan Africa
Salamander, Chinese giant	<i>Andrias davidianus</i>	China
Salmon, sockeye	<i>Oncorhynchus nerka</i>	U.S. (OR, WA)
Sea lion, Steller (Western pop.)	<i>Eumetopias jubatus</i>	U.S. (AK), Russia
Squirrel, Carolina northern flying	<i>Glaucomys sabrinus coloratus</i>	U.S. (NC, TN, VA)
Tiger	<i>Panthera tigris</i>	Asia
Tortoise, Galapagos	<i>Geochelone nigra</i>	Ecuador (Galapagos Islands)
Whale, gray (Western North Pacific pop.)	<i>Eschrichtius robustus</i>	NW Pacific Ocean
Wolf, red	<i>Canis rufus</i>	U.S. (FL)
Woodpecker, ivory-billed	<i>Campephilus principalis</i>	U.S. (AR)
Yak, wild	<i>Bos mutus</i>	China (Tibet), India
Zebra, mountain	<i>Equus zebra zebra</i>	South Africa

Status of Endangered and Threatened Species, 2022

Source: Fish and Wildlife Service, U.S. Dept. of the Interior; as of July 2022

(1) 22 animal species are counted more than once in this table, primarily because these animals have distinct population segments, each with its own individual listing status. The U.S. species tallied more than once as endangered or threatened are Atlantic sturgeon, bearded seal, California tiger salamander, Chinook salmon, chum salmon, coho salmon, gray wolf, mountain yellow-legged frog, piping plover, roseate tern, sockeye salmon, and steelhead. The foreign species counted more than once are argali, broad-snouted caiman, humpback whale, leopard, scalloped hammerhead shark, and vicuña. Green sea turtles and loggerhead sea turtles appear on both the U.S. and foreign lists.

Major Venomous Animals

Snakes

Asian pit viper—2 ft to 5 ft long; throughout Asia; reactions and mortality vary, but most bites cause tissue damage; mortality generally low.

Australian brown snake—4 ft to 7 ft long; very slow onset of cardiac or respiratory distress; moderate mortality, but because death can be sudden and unexpected, it is the most dangerous of the Australian snakes; antivenom.

Barba amarilla or fer-de-lance—up to 7 ft long; from tropical Mexico to Brazil; severe tissue damage common; moderate mortality; antivenom.

Black mamba—up to 14 ft long; southern and central Africa; rapid onset of dizziness, difficulty breathing, erratic heartbeat; mortality high, nears 100% without antivenom.

Boomslang—less than 6 ft long; African savannahs; rapid onset of nausea and dizziness, often followed by slight recovery and then sudden death from internal hemorrhaging; bites rare, mortality high; antivenom.

Bushmaster—up to 12 ft long; tropical forests of Central and S America; few bites occur, but mortality high.

Common, or Asian, cobra—4 ft to 8 ft long; throughout S Asia; considerable tissue damage, sometimes paralysis; mortality probably not more than 10%; antivenom.

Copperhead—less than 4 ft long; New England to Texas; pain and swelling; very seldom fatal; antivenom seldom needed.

Coral snake—2 ft to 5 ft long; in Americas S of Canada; bite may be painless; slow onset of paralysis, impaired breathing; mortalities rare but high without antivenom and mechanical respiration.

Cottonmouth water moccasin—up to 5 ft long; wetlands of southern U.S. from Virginia to Texas; rapid onset of severe pain, swelling, tissue destruction can be extensive; mortality low; antivenom.

Death adder—less than 3 ft long; Australia; rapid onset of faintness, cardiac and respiratory distress; at least 50% mortality without antivenom.

Desert horned viper—up to 2 ft long; dry areas of Africa and western Asia; swelling and tissue damage; mortality low; antivenom.

European viper—1 ft to 3 ft long; throughout Europe; bleeding and tissue damage; mortality low; antivenom.

Gaboon viper—more than 6 ft long; S of the Sahara; massive tissue damage, internal bleeding; few recorded bites.

King cobra—up to 16 ft long; throughout S Asia; rapid swelling, dizziness, loss of consciousness, difficulty breathing, erratic heartbeat; mortality varies with amount of venom involved, but most bites involve nonfatal amounts; antivenom.

Krait—up to 5 ft long; SE Asia; rapid onset of sleepiness, numbness; up to 50% mortality even with use of antivenom.

Puff adder—up to 5 ft long, thick; S of the Sahara, throughout the Middle East; rapid large swelling, great pain, dizziness; moderate mortality, often from internal bleeding; antivenom.

Rattlesnake—2 ft to 6 ft long; throughout Western Hemisphere; rapid onset of severe pain, swelling; mortality low, but amputation of affected digits is sometimes necessary; antivenom. Mojave rattler may produce temporary paralysis.

Ringhals, or spitting, cobra—5 ft to 7 ft long; southern Africa; squirts venom through holes in front of fangs as a defense; venom severely irritating and can cause blindness.

Russell's viper or tic-polonga—more than 5 ft long; throughout Asia; internal bleeding; bite reports common; moderate mortality rate; antivenom.

Saw-scaled, or carpet, viper—up to 2 ft long; dry areas from India to Africa; severe bleeding, fever; high mortality, causes more human fatalities than any other snake; antivenom.

Sea snake—3 ft to 10 ft long; throughout Pacific, Indian Oceans except NE Pacific; almost painless bite; variety of muscle pain, paralysis; mortality low, many bites not envenomed; some antivenoms.

Sharp-nosed pit viper or hundred-pace snake—up to 5 ft long; S Vietnam, Taiwan, and China; the most toxic of Asian pit vipers; very rapid onset of swelling and tissue damage, internal bleeding; moderate mortality; antivenom.

Taipan—up to 11 ft long; Australia and New Guinea; rapid paralysis with severe breathing difficulty; mortality nears 100% without antivenom.

Tiger snake—2 ft to 6 ft long; southern Australia; pain, numbness, mental disturbances with rapid paralysis; may be deadliest of all land snakes, but antivenom is quite effective.

Yellow, or cape, cobra—7 ft long; southern Africa; most toxic venom of any cobra; rapid onset of swelling, breathing and cardiac difficulties; mortality is high without treatment; antivenom.

Note: Not all bites by venomous snakes are actually envenomed. Any animal bite, however, carries the danger of tetanus, and anyone suffering a venomous snake bite should seek medical attention. Antivenoms do not cure; they are only an aid in the treatment of bites. Mortality rates above are for envenomed bites: low mortality, c. 2% or less; moderate, 2%-5%; high, 5%-15%.

Lizards

Gila monster—up to 24 in. long, with heavy body and tail; high desert in SW U.S. and northern Mexico; immediate severe pain, transient low blood pressure; no recent mortality.

Mexican beaded lizard—similar to Gila monster; W coast of Mexico; reaction and mortality similar to Gila monster.

Insects

Ants, bees, hornets, wasps—global distribution; usual reaction is piercing pain in area of sting, though many people suffer allergic reactions (swelling, rashes); not directly fatal, except in cases of massive multiple stings, and a few may die within minutes from severe sensitivity to the venom (anaphylactic shock).

Spiders, scorpions

Black widow—small, round-bodied with red hourglass marking; the widow and its relatives are found in tropical and temperate zones; severe musculoskeletal pain, weakness, breathing difficulty, convulsions, which may be more serious in small children; low mortality; antivenom. The **redback** spider of Australia has the hourglass marking on its back, rather than on its front, but otherwise looks almost identical to the black widow.

Brown recluse, or fiddleback, spider—small, oblong body; throughout U.S.; pain with later ulceration, which may last months, at place of bite; fever, nausea, and stomach cramps in severe cases; very low mortality.

Funnel web spider—several varieties, often large; Australia; slow onset of breathing, circulation difficulties; low mortality; antivenom.

Scorpion—crablike body with stinger in tail, various sizes; many varieties throughout tropical and subtropical areas; severe pain spreading from the wound, numbness, severe agitation, cramps, and even respiratory failure; low mortality, usually in children; antivenoms.

Tarantula—large, hairy spider; worldwide; the American tarantula, and probably all other tarantulas, are harmless to humans, though their bite may cause some pain and swelling.

Sea life

Cone-shell—mollusk in small shell; S Pacific and Indian Oceans; shoots barbs into victims; paralysis; low mortality.

Octopus—global distribution, usually in warm waters; rapid onset of paralysis with breathing difficulty; all varieties produce venom, but only a few can cause death.

Portuguese man-of-war—jellyfish-like siphonophore with tentacles up to 100 ft long; in most warm water areas; immediate severe pain; not directly fatal, though shock may cause death in rare cases.

Sea wasp or box jellyfish—tentacles up to 30 ft long; S Pacific; very rapid onset of circulatory problems; high mortality because of speed of toxic reaction; antivenom.

Stingray—several varieties of differing sizes; tropical and temperate seas and some freshwater; severe pain, rapid onset of nausea, vomiting, breathing difficulties; wound area may ulcerate, gangrene may occur; seldom fatal.

Stonefish—brownish fish that lies motionless on bottom of shallow waters; throughout S Pacific and Indian Oceans; extraordinary pain, rapid paralysis; low mortality; antivenom, warm water relieves pain.

Speeds of Selected Animals

Dog Breeds by Type

Source: American Kennel Club (AKC)

As of mid-2022, the AKC recognized about 200 registered breeds and used the following seven groups to classify them, according to functions and other distinctive traits.

Herding Group: Australian Cattle Dog, Australian Shepherd, Bearded Collie, Beauceron, Belgian Laekenois, Belgian Malinois, Belgian Sheepdog, Belgian Tervuren, Bergamasco Sheepdog, Berger Picard, Border Collie, Bouvier des Flandres, Briard, Canaan Dog, Cardigan Welsh Corgi, Collie, Entlebucher Mountain Dog, Finnish Lapphund, German Shepherd Dog, Icelandic Sheepdog, Miniature American Shepherd, Mudi, Norwegian Buhund, Old English Sheepdog, Pembroke Welsh Corgi, Polish Lowland Sheepdog, Puli, Pumi, Pyrenean Shepherd, Shetland Sheepdog, Spanish Water Dog, Swedish Vallhund.

Hound Group: Afghan Hound, American English Coonhound, American Foxhound, Azawakh, Basenji, Basset Hound, Beagle, Black and Tan Coonhound, Bloodhound, Bluetick Coonhound, Borzoi, Cirneco dell'Etna, Dachshund, English Foxhound, Grand Basset Griffon Vendéen, Greyhound, Harrier, Ibizan Hound, Irish Wolfhound, Norwegian Elkhound, Otterhound, Petit Basset Griffon Vendéen, Pharaoh Hound, Plott Hound, Portuguese Podengo Pequeno, Redbone Coonhound, Rhodesian Ridgeback, Saluki, Scottish Deerhound, Sloughi, Treeing Walker Coonhound, Whippet.

Non-Sporting Group: American Eskimo Dog, Bichon Frise, Boston Terrier, Bulldog, Chinese Shar-Pei, Chow Chow, Coton de Tulear, Dalmatian, Finnish Spitz, French Bulldog, Keeshond, Lhasa Apso, Löwchen, Norwegian Lundehund, Poodle (Standard and Miniature), Schipperke, Shiba Inu, Tibetan Spaniel, Tibetan Terrier, Xoloitzcuintli.

Sporting Group: American Water Spaniel, Barbet, Boykin Spaniel, Bracco Italiano, Brittany, Chesapeake Bay Retriever, Clumber

Spaniel, Cocker Spaniel, Curly-Coated Retriever, English Cocker Spaniel, English Setter, English Springer Spaniel, Field Spaniel, Flat-Coated Retriever, German Shorthaired Pointer, German Wirehaired Pointer, Golden Retriever, Gordon Setter, Irish Red and White Setter, Irish Setter, Irish Water Spaniel, Labrador Retriever, Lagotto Romagnolo, Nederlandse Kooikerhondje, Nova Scotia Duck Tolling Retriever, Pointer, Spinone Italiano, Sussex Spaniel, Vizsla, Weimaraner, Welsh Springer Spaniel, Wirehaired Pointing Griffon, Wirehaired Vizsla.

Terrier Group: Airedale Terrier, American Hairless Terrier, American Staffordshire Terrier, Australian Terrier, Bedlington Terrier, Border Terrier, Bull Terrier, Cairn Terrier, Cesky Terrier, Dandie Dinmont Terrier, Glen of Imaal Terrier, Irish Terrier, Kerry Blue Terrier, Lakeland Terrier, Manchester Terrier (Standard), Miniature Bull Terrier, Miniature Schnauzer, Norfolk Terrier, Norwich Terrier, Parson Russell Terrier, Rat Terrier, Russell Terrier, Scottish Terrier, Sealyham Terrier, Skye Terrier, Smooth Fox Terrier, Soft Coated Wheaten Terrier, Staffordshire Bull Terrier, Welsh Terrier, West Highland White Terrier, Wire Fox Terrier.

Toy Group: Affenpinscher, Biewer Terrier, Brussels Griffon, Cavalier King Charles Spaniel, Chihuahua, Chinese Crested, English Toy Spaniel, Havanese, Italian Greyhound, Japanese Chin, Maltese, Manchester Terrier (Toy), Miniature Pinscher, Papillon, Pekingese, Pomeranian, Poodle (Toy), Pug, Russian Toy, Shih Tzu, Silky Terrier, Toy Fox Terrier, Yorkshire Terrier.

Working Group: Akita, Alaskan Malamute, Anatolian Shepherd Dog, Bernese Mountain Dog, Black Russian Terrier, Boerboel, Boxer, Bullmastiff, Cane Corso, Chinook, Doberman Pinscher, Dogo Argentino, Dogue de Bordeaux, German Pinscher, Giant Schnauzer, Great Dane, Great Pyrenees, Greater Swiss Mountain Dog, Komondor, Kuvasz, Leonberger, Mastiff, Neapolitan Mastiff, Newfoundland, Portuguese Water Dog, Rottweiler, Saint Bernard, Samoyed, Siberian Husky, Standard Schnauzer, Tibetan Mastiff.

Discoveries and Innovations: Biology, Chemistry, Medicine, Physics

Discovery	Date	Discoverer(s)	Nationality
Acetylene gas	1862	Berthelot	French
ACTH	1927	Evans, Long	U.S.
Adrenaline	1901	Takamine	Japanese
Aluminum, electrolytic process	1886	Hall	U.S.
Aluminum, isolated	1825	Oersted	Danish
Anesthesia, ether	1842	Long	U.S.
Anesthesia, local	1885	Koller	Austrian
Anesthesia, spinal	1898	Bier	German
Aniline dye	1856	Perkin	English
Anti-rabies	1885	Pasteur	French
Antiseptic surgery	1867	Lister	English

Disc player, compact	1979	Sony, Philips Co.	Japanese, Dutch
Dishwasher	1893	Cochrane	U.S.
Disk, floppy	1970	IBM	U.S.
Disk, video	1972	Philips Co.	Dutch
Drone (unmanned aircraft, remotely controlled)	1916	Low	English
Dynamite	1866	Nobel	Swedish
Dynamo, contin. current	1871	Gramme	Belgian
Electric battery	1800	Volta	Italian
Electric fan	1882	Wheeler	U.S.
Electrocardiograph	1903	Einthoven	Dutch
Electroencephalograph	1929	Berger	German
Electromagnet	1824	Sturgeon	English
Electron microscope	1931	Ruska, Knoll	German
Electron spectrometer	1944	Deutsch, Elliott, Evans	U.S.
Electron tube multigrid	1913	Langmuir	U.S.
Electronic cigarette (nicotine-based)	2003	Hon (Han)	Chinese
Electronic paper (e-ink)	1974	Sheridon	U.S.
Electroplating	1805	Brugnatelli	Italian
Electrostatic generator	1929	Van de Graaff	U.S.
Elevator brake	1852	Otis	U.S.
Elevator, push button	1922	Larson	U.S.
Engine, automatic transmission	1910	Fottinger	German
Engine, coal-gas 4-cycle	1876	Otto	German
Engine, compression ignition	1883	Daimler	German
Engine, electric ignition	1883	Benz	German
Engine, gas, compound	1926	Eickemeyer	U.S.
Engine, gasoline	1872	Brayton	U.S.
Engine, gasoline	1889	Daimler	German

Engine, jet	1930	Whittle	English
Engine, steam, piston	1705	Newcomen	English
Engine, steam, piston	1769	Watt	Scottish
Engraving, half-tone	1852	Talbot	U.S.
Ferris wheel	1893	Ferris	U.S.
Fiber optic wire	1970	Keck, Maurer, Schultz	U.S.
Fiber optics	1955	Kapany	English
Fiberglass	1938	Owens-Corning	U.S.
Filament, tungsten	1913	Coolidge	U.S.
Flanged rail	1831	Stevens	U.S.
Flatiron, electric	1882	Seely	U.S.
Food, frozen	1923	Birdseye	U.S.
Freon	1930	Midgley, et al.	U.S.
Furnace (for steel)	1858	Siemens	German
Galvanometer	1820	Sweigger	German
Garbage bag, polyethylene	1950	Wasylyk	Canadian
Gas discharge tube	1922	Hull	U.S.
Gas lighting	1792	Murdoch	Scottish
Gas mantle	1885	Welsbach	Austrian
Gasoline, cracked	1913	Burton	U.S.
Gasoline, high octane	1930	Ipatieff	Russian
Gasoline (lead ethyl)	1922	Midgley	U.S.
Geiger counter	1913	Geiger	German
Geodesic dome	1948	Fuller	U.S.
Glass, laminated safety	1909	Benedictus	French
Glider	1853	Cayley	English
Google search software	1996	Brin, Page	U.S.
Gun, breechloader	1811	Thornton	U.S.
Gun, Browning	1897	Browning	U.S.
Gun, magazine	1875	Hotchkiss	U.S.
Gun, silencer	1908	Maxim, H. P.	U.S.
Guncotton (nitrocellulose)	1847	Schoenbein	German
Gyrocompass	1911	Sperry	U.S.
Gyroscope	1852	Foucault	French

Hard drive, computer	1955	Johnson	U.S.
Harvester-thresher	1818	Lane	U.S.
Heart, artificial	1982	Jarvik	U.S.
Helicopter	1939	Sikorsky	U.S.
Hovercraft	1955	Cockerell	English
Hydrometer	1768	Baume	French
Iron lung	1928	Drinker, Slaw	U.S.
Jet Ski	1973	Jacobsen	U.S.
Kaleidoscope	1817	Brewster	Scottish
Kevlar	1965	Kwolek, Blades	U.S.
Kidney dialysis machine	1941	Kolff	Dutch
Kinetoscope	1889	Edison	U.S.
Lamp, arc	1847	Staite	English
Lamp, fluorescent	1938	General Electric, Westinghouse	U.S.
Lamp, incandescent	1879	Edison	U.S.
Lamp, incand., gas	1913	Langmuir	U.S.
Lamp, klieg	1911	Kliegl, A. and J.	U.S.
Lamp, mercury vapor	1912	Hewitt	U.S.
Lamp, miner's safety	1816	Davy	English
Lamp, neon	1909	Claude	French
Lathe, turret	1845	Fitch	U.S.
Launderette	1934	Cantrell	U.S.
Lens, achromatic	1758	Dollond	English
Lens, fused bifocal	1908	Borsch	U.S.
Leyden jar (condenser)	1745	von Kleist	German
Lightning rod	1752	Franklin	U.S.
Linoleum	1860	Walton	English
Linotype	1884	Mergenthaler	U.S.
Linux	1991	Torvalds	Finnish
Liquid Paper	c. 1951	Graham	U.S.
Lock, cylinder	1851	Yale	U.S.
Locomotive, electric	1851	Vail	U.S.
Locomotive, exp'mtl	1802	Trevithick	English
Locomotive, exp'mtl	1812	Fenton, et al.	English
Locomotive, exp'mtl	1814	Stephenson	English

Locomotive, 1st U.S.	1830	Cooper	U.S.
Locomotive, practical	1829	Stephenson	English
Loom, power	1785	Cartwright	English
Loudspeaker, dynamic	1924	Rice, Kellogg	U.S.
Machine gun	1862	Gatling	U.S.
Machine gun, improved	1872	Hotchkiss	U.S.
Machine gun (Maxim)	1883	Maxim, H. S.	U.S.-Eng.
Magnet, electro	1828	Henry	U.S.
Magnetic Resonance Imaging (MRI)	1971	Damadian	U.S.
Maser	1953	Townes	U.S.
Mason jar	1858	Mason	U.S.
Match, friction	1827	Walker	English
Mercerized textiles	1843	Mercer	English
Meter, induction	1888	Shallenberger	U.S.
Metronome	1816	Malezel	German
Microcomputer	1973	Truong, et al.	French
Micrometer	1636	Gascoigne	English
Microphone	1877	Berliner	U.S.
Microprocessor	1971	Intel Corp.	U.S.
Microscope, compound	1590	Janssen	Dutch
Microscope, electronic	1931	Knoll, Ruska	German
Microscope, field ion	1951	Mueller	German
Microwave oven	1947	Spencer	U.S.
Monitor, warship	1861	Ericsson	U.S.
Monotype	1887	Lanston	U.S.
Motor, AC	1892	Tesla	U.S.
Motor, DC	1837	Davenport	U.S.
Motor, induction	1887	Tesla	U.S.
Motorcycle	1885	Daimler	German
Mouse, computer	1967	Engelbart	U.S.
Movie machine	1894	Jenkins	U.S.
Movie, panoramic	1952	Waller	U.S.
Movie, talking	1927	Warner Bros.	U.S.
Mower, lawn	1831	Budding, Ferrabee	English
Mowing machine	1822	Bailey	U.S.

Neoprene	1930	Carothers	U.S.
Nylon	1937	Carothers, DuPont	U.S.
Oil cracking furnace	1891	Gavrilov	Russian
Oil filled power cable	1921	Emanueli	Italian
Oleomargarine	1869	Mege-Mouries	French
Ophthalmoscope	1851	Helmholtz	German
Pacemaker	1952	Zoll	U.S.
Pacemaker, implantable cardiac	1958	Greatbatch	U.S.
Paper	105	Ts'ai	Chinese
Paper clip	1900	Waler	Norwegian
Paper machine	1809	Dickinson	U.S.
Parachute	1785	Blanchard	French
Pen, ballpoint	1888	Loud	U.S.
Pen, fountain	1884	Waterman	U.S.
Pen, steel	1780	Harrison	English
Pendulum	1583	Galileo	Italian
Percussion cap	1807	Forsythe	Scottish
Phonograph	1877	Edison	U.S.
Photo, color	1892	Ives	U.S.
Photo film, celluloid	1893	Reichenbach	U.S.
Photo film, transparent	1884	Eastman, Goodwin	U.S.
Photocopier	1938	Carlson	U.S.
Photoelectric cell	1895	Elster	German
Photographic paper	1835	Talbot	English
Photography	1816	Niepce	French
Photography	1835	Daguerre	French
Photography	1835	Talbot	English
Photophone	1880	Bell	U.S.-Scot.
Phototelegraphy	1925	Bell Labs	U.S.
Piano	1709	Cristofori	Italian
Piano, player	1863	Fourneaux	French
Pin, safety	1849	Hunt	U.S.
Pistol (revolver)	1836	Colt	U.S.
Plow, cast iron	1785	Ransome	English

Plow, disc	1896	Hardy	U.S.
Pneumatic hammer	1890	King	U.S.
Post-it note	1980	Fry, Silver	U.S.
Powder, smokeless	1884	Vieille	French
Printing press, rotary	1845	Hoe	U.S.
Printing press, web	1865	Bullock	U.S.
Propeller, screw	1804	Stevens	U.S.
Propeller, screw	1837	Ericsson	Swedish
Punch card accounting	1889	Hollerith	U.S.
Radar	1940	Watson-Watt	Scottish
Radio amplifier	1906	De Forest	U.S.
Radio beacon	1928	Donovan	U.S.
Radio crystal oscillator	1918	Nicolson	U.S.
Radio FM, 2-path	1933	Armstrong	U.S.
Radio, magnetic detector	1902	Marconi	Italian
Radio receiver, cascade tuning	1913	Alexanderson	U.S.
Radio receiver, heterodyne	1913	Fessenden	Canadian
Radio, signals	1895	Marconi	Italian
Radio transmitter triode modulation	1914	Alexanderson	U.S.
Radio tube diode	1904	Fleming	English
Radio tube oscillator	1915	De Forest	U.S.
Radio tube triode	1906	De Forest	U.S.
Rayon (acetate)	1895	Cross	English
Rayon (cuprammonium)	1890	Despeissis	French
Rayon (nitrocellulose)	1884	Chardonnet	French
Razor, electric	1928	Schick	U.S.
Razor, safety	1895	Gillette	U.S.
Reading machine for the blind	1976	Kurzweil	U.S.
Reaper	1834	McCormick	U.S.
Record, cylinder	1887	Bell, Tainter	U.S.
Record, disc	1887	Berliner	U.S.
Record, long playing	1947	Goldmark	U.S.
Record, wax cylinder	1888	Edison	U.S.

Refrigerator car	1868	David	U.S.
Remote control	1898	Tesla	U.S.
Resin, synthetic	1931	Hill	English
Richter scale	1935	Richter	U.S.
Rifle, repeating	1860	Henry	U.S.
Rocket, liquid fuel	1926	Goddard	U.S.
Rollerblades	1980	Olson	U.S.
Rubber, vulcanized	1839	Goodyear	U.S.
Saccharin	1879	Remsen, Fahlberg	U.S.
Saw, circular	1777	Miller	English
Scotch tape	1930	Drew	U.S.
Seat belt	1959	Volvo	Swedish
Segway human transporter	2001	Kamen	U.S.
Seismograph	1880	Milne, Ewing, Gray	Eng.-Scot.
Sewing machine	1790	Saint	English
Shoe-lasting machine	1883	Matzeliger	U.S.
Shoe-sewing machine	1860	McKay	U.S.
Shrapnel shell	1784	Shrapnel	English
Shuttle, flying	1733	Kay	English
Skates, in-line	1759	Merlin	Belgian
Sleeping-car	1865	Pullman	U.S.
Slide rule	1620	Oughtred	English
Slinky	1943	James	U.S.
Smoke detector	1969	Smith, House	U.S.
Soap, hardwater	1928	Bertsch	German
Spectroscope	1859	Kirchoff, Bunsen	German
Spectroscope (mass)	1918	Dempster	U.S.
Spinning jenny	c. 1764	Hargreaves	English
Spinning mule	1779	Crompton	English
Steam car	1770	Cugnot	French
Steam turbine	1884	Parsons	English
Steamboat, exp'mtl	1778	Jouffroy	French
Steamboat, exp'mtl	1785	Fitch	U.S.

Steamboat, exp'mtl	1787	Rumsey	U.S.
Steamboat, exp'mtl	1803	Fulton	U.S.
Steamboat, exp'mtl	1804	Stevens	U.S.
Steamboat, practical	1802	Symington	Scottish
Steamboat, practical	1807	Fulton	U.S.
Steel alloy, high-speed	1901	Taylor, White	U.S.
Steel (converter)	1856	Bessemer	English
Steel, manganese	1884	Hadfield	English
Steel, stainless	1916	Breareley	English
Stereoscope	1838	Wheatstone	English
Stethoscope	1819	Laennec	French
Stethoscope, binaural	1840	Cammann	U.S.
Stock ticker	1870	Edison	U.S.
Storage battery, rechargeable	1859	Plante	French
Stove, electric	1896	Hadaway	U.S.
Submarine	1891	Holland	U.S.
Submarine, even keel	1894	Lake	U.S.
Submarine, torpedo	1776	Bushnell	U.S.
Synthesizer	1964	Moog	U.S.
Tank, military	1914	Swinton	English
Tape recorder, magnetic	1899	Poulsen	Danish
Taser	1974	Cover	U.S.
Teflon	1938	Du Pont	U.S.
Telegraph, magnetic	1837	Morse	U.S.
Telegraph, quadruplex	1864	Edison	U.S.
Telegraph, railroad	1887	Woods	U.S.
Telegraph, wireless high frequency	1895	Marconi	Italian
Telephone ¹	1871	Meucci	U.S.-Italian
Telephone ¹	1876	Bell	U.S.-Scot.
Telephone amplifier	1912	De Forest	U.S.
Telephone answering machine (1st practical)	1954	Hashimoto	Japanese
Telephone, automatic	1891	Strowger	U.S.
Telephone, cellular	1947	Bell Labs	U.S.
Telephone, cordless ²	1950	Gross	U.S.

Telephone, radio	1900	Poulsen Fessenden	Danish Canadian
Telephone, radio	1906	De Forest	U.S.
Telephone, radio, long distance	1915	AT&T	U.S.
Telephone, recording	1898	Poulsen	Danish
Telescope	1608	Lippershey	Dutch
Telescope	1609	Galileo	Italian
Telescope, astronomical	1611	Kepler	German
Telescope, reflecting	1668	Newton	English
Teletype	1928	Morkrum, Kleinschmidt	U.S.
Television, color	1928	Baird	Scottish
Television, electronic	1927	Farnsworth	U.S.
Television, iconoscope	1923	Zworykin	U.S.
Television, mech. scanner	1923	Baird	Scottish
Tesla coil	1891	Tesla	U.S.
Thermometer	1593	Galileo	Italian
Thermometer	1730	Reaumur	French
Thermometer, mercury	1714	Fahrenheit	German
3D printing (stereolithography)	1984	Hull	U.S.
Time recorder	1890	Bundy	U.S.
Tire, double-tube	1845	Thomson	Scottish
Tire, pneumatic	1888	Dunlop	Scottish
Toaster, automatic	1921	Strite	U.S.
Toilet, flush	1589	Harington	English
Torpedo, marine	1804	Fulton	U.S.
Tractor, crawler	1904	Holt	U.S.
Transformer, AC	1885	Stanley	U.S.
Transistor	1947	Shockley, Brattain, Bardeen	U.S.
Trolley car, electric	1884-87	Van DePoele, Sprague	U.S.
Tungsten, ductile	1912	Coolidge	U.S.
Tupperware®	1945	Tupper	U.S.
Turbine, gas	1849	Bourdin	French

Turbine, hydraulic	1849	Francis	U.S.
Turbine, steam	1884	Parsons	English
Type, movable	1447	Gutenberg	German
Typewriter	1867	Sholes, Soule, Glidden	U.S.
Universal Serial Bus (USB)	1994	Bhatt, et al.	U.S.
Vacuum cleaner, electric	1907	Spangler	U.S.
Vacuum evaporating pan	1846	Rillieux	U.S.
Velcro	1948	de Mestral	Swiss
Video game ("Pong")	1972	Bushnell	U.S.
Video home system (VHS)	1975	Matsushita, JVC	Japanese
Vinyl	1926	Semon	U.S.
Washer, electric	1901	Fisher	U.S.
Welding, atomic hydrogen	1924	Langmuir, Palmer	U.S.
Welding, electric	1877	Thomson	U.S.
Wheelchair, multiterrain	1986	Twitchell	U.S.
Wheelchair, stair- climbing	1962	Blanco	U.S.
Wiki software	1995	Cunningham	U.S.
Wind tunnel	1912	Eiffel	French
Windshield wiper	1903	Anderson	U.S.
Wire, barbed	1874	Glidden	U.S.
World Wide Web	1989	Berners-Lee	English
Wrench, double-acting	1913	Owen	U.S.
X-ray tube	1913	Coolidge	U.S.
Zamboni	1949	Zamboni	U.S.
Zeppelin	1900	Zeppelin	German
Zipper, early model	1893	Judson	U.S.
Zipper, improved	1913	Sundback	Canadian

(1) While Alexander Graham Bell has traditionally been credited with invention of the telephone, which he patented, Antonio Meucci developed a working model before Bell. (2) Al Gross held a number of important early patents in the field of wireless communication; other people were also involved in the development of practical cordless telephones.

U.S. Patents by Field of Technology, 2000-20

TECHNOLOGY

Computer Milestones

- 1623:** German mathematician Wilhelm Schickard developed the first mechanical calculator, capable of adding, subtracting, multiplying, and dividing.
- 1642:** French mathematician Blaise Pascal built the first of more than four dozen copies of an adding and subtracting machine that he invented.
- 1801:** French inventor Joseph Marie Jacquard demonstrated a new control system for looms. He “programmed” the loom, communicating desired weaving operations to the machine via patterns of holes in paper cards.
- 1833-71:** British mathematician and scientist Charles Babbage used the Jacquard punch-card system in his design for a sophisticated, programmable “Analytical Engine” that foreshadowed basic features of today’s computers. Babbage’s concept was beyond the capabilities of the technology of his time, and the machine remained unfinished at his death in 1871.
- 1889:** American engineer Herman Hollerith patented an electromechanical punch-card tabulating system that facilitated the handling of large amounts of statistical data and quickly found use in censuses in the U.S. and other countries.
- 1911:** Hollerith’s Tabulating Machine Company merged with two other enterprises to form the Computing-Tabulating-Recording Company, which was renamed the International Business Machines Corporation (IBM) in 1924.
- 1941:** German engineer Konrad Zuse completed the Z3, the first fully functional digital computer to be controlled by a program; the Z3 was not electronic—it was based on electrical switches called relays.
- 1942:** Iowa State Coll. physicist John Vincent Atanasoff and assistant Clifford Berry completed a working model of the first fully electronic

computer using vacuum tubes, which could operate much more quickly than relays; the rudimentary machine was not programmable.

1943: IBM and Harvard professor Howard Aiken completed the first large-scale automatic digital computer, the Mark I, a relay-based machine 55-ft long and 8-ft high. British scientists built their first Colossus machine, an electronic computer for breaking German codes during World War II.

1946: ENIAC (Electronic Numerical Integrator and Computer), a 30-ton room-sized electronic computer with more than 18,000 vacuum tubes, was completed by physicist John Mauchly and engineer J. Presper Eckert at the Univ. of Pennsylvania for the U.S. Army. ENIAC could be programmed to do different tasks, but cables had to be plugged in, and switches had to be set by hand.

1951: Eckert and Mauchly's UNIVAC (Universal Automatic Computer) became the first commercially available computer in the U.S. Its first customer was the Census Bureau. CBS-TV used a UNIVAC in 1952 to predict presidential election results.

1959: COBOL, a computer programming language designed for business use, first appeared, based on programming language innovations of American mathematician Grace Hopper.

1967: American computer pioneer Doug Engelbart applied for a patent on the mouse.

1969-71: The powerful Unix operating system was developed at Bell Laboratories; later versions became widely used on large computers and formed the basis for the Macintosh OS X operating system (introduced in 2001).

1971: Intel released the 4004, the first commercial microprocessor (an entire computer processing unit on a chip).

1973: The Alto computer, developed at Xerox's Palo Alto Research Center, became operational, implementing many features of modern commercial personal computers, including a graphical user interface (GUI) featuring windows, icons, and pointers that could be manipulated by a mouse.

1975: The first widely marketed personal computer (PC), the MITS Altair 8800, was introduced in kit form, with no keyboard, video display, or

printer, for under \$400. Microsoft was founded by Americans Bill Gates and Paul Allen.

- 1976:** The first word-processing program for personal computers, Electric Pencil, was written. Apple Computer Company was founded by Americans Steven Jobs and Stephen Wozniak.
- 1977:** Apple introduced the Apple II; capable of displaying text and graphics in color, the machine enjoyed phenomenal success.
- 1981:** IBM unveiled its Personal Computer (IBM 5150), which used an operating system from Microsoft known as MS-DOS (Disk Operating System).
- 1984:** Apple introduced the first Macintosh. The easy-to-use Macintosh came with a proprietary operating system and was the first popular computer to have a GUI and a mouse.
- 1990:** Microsoft released Windows 3.0, the first workable version of its own GUI. Adobe released the first commercial version of the image-editing software Photoshop.
- 1991:** The Unix-like Linux operating system was invented by Helsinki Univ. student Linus Torvalds and made available for free.
- 1996:** The Palm Pilot, the first widely successful handheld computer and personal information manager, arrived.
- 1997:** The IBM supercomputer Deep Blue beat Russian world chess champion Garry Kasparov in a 6-game match, 2-1, with 3 draws.
- 2002:** The total number of personal computers, including desktop and laptop machines of all types, shipped by manufacturers since 1975 reached 1 bil.
- 2007:** Amazon launched the Kindle, a hardware/software system for displaying books electronically.
- 2008:** Google released the Linux-based Android operating system for mobile devices.
- 2010:** Apple released the iPad tablet computer and sold more than 3 mil devices in the first 80 days.
- 2012:** Microsoft released Windows 8, featuring enhanced support for touchscreens and an interface with a grid of tiles displaying actively updated content and apps.

2015: Microsoft released Windows 10, promising faster startup and improved security, along with features like a personal digital assistant and a new web browser, Microsoft Edge.

2016: Univ. of Maryland scientists developed the first reprogrammable quantum computer; it used lasers to manipulate its five qubits, or bits of quantum information.

2022: Apple became the first company in the world to achieve a stock market value of \$3 tril; in 2018, it had become the first company to hit \$1 tril. The U.S. supercomputer Frontier became the first “exascale” computer, capable of more than 1 exaflop, or 1 quintillion (billion billion) operations per second.

World's Fastest Supercomputers, 2022

Source: [Top500.org](https://www.top500.org/), as of midyear 2022

Rank	Name	Location	Manufacturer/ vendor	Processors (cores)	Top speed ¹
1.	Frontier	Oak Ridge National Laboratory, TN, U.S	HPE Cray	8,730,112	1,102.00
2.	Supercomputer Fugaku	RIKEN Center for Computational Science, Japan	Fujitsu	7,630,848	442.01
3.	LUMI	EuroHPC at CSC Data Center, Kajaani, Finland	HPE Cray	1,110,144	151.90
4.	Summit	Oak Ridge National Laboratory, TN, U.S.	IBM	2,414,592	148.60
5.	Sierra	Lawrence Livermore National Laboratory, CA, U.S.	IBM	1,572,480	94.64
6.	Sunway TaihuLight	National Supercomputing Center, Wuxi, China	NRCPC ²	10,649,600	93.01
7.	Perlmutter	National Energy Research Scientific Computing Center, CA, U.S	HPE Cray	761,856	70.87
8.	Selene	Nvidia, Santa Clara, CA, U.S	Nvidia	555,520	63.46
9.	Tianhe-2A (Milky Way-2A)	National Super Computer Center, Guangzhou, China	NUDT ³	4,981,760	61.44
10.	Adastr	GENCI-CINES, France	HPE Cray	319,072	46.10

About the Internet

The internet is not owned or funded by any one institution, organization, or government. It has no CEO and is not a commercial service. Its development is guided by the Internet Society (ISOC), a nonprofit formed in 1992. The Internet Society helps fund the Internet Engineering Task Force (IETF), which deals with short-term issues of standards and the internet's architecture. The Internet Architecture Board (IAB), a committee of the IETF, oversees the latter's work and appoints the chair of the Internet Research Task Force (IRTF). The IAB and IRTF focus on long-term issues.

Major Historical Highlights

- 1969:** ARPANET, an experimental four-computer network, was established by the Advanced Research Projects Agency (ARPA) of the U.S. Defense Dept. Two years later, ARPANET linked about 23 computers ("hosts") at 15 sites, including MIT and Harvard.
- 1971:** Engineer Bob Thomas created Creeper, generally considered the first worm, a virus able to self-replicate over a network.
- 1976:** British evolutionary biologist Richard Dawkins coined the term "meme," referring to an idea or a behavior that persists and may spread "virally."
- 1978:** The first spam, or junk email, was sent over ARPANET.
- 1982:** Author William Gibson coined the term "cyberspace" in the story "Burning Chrome."
- 1983:** The set of communications rules (protocol) known as TCP/IP became the main networking protocol of ARPANET. Its adoption was tantamount to the birth of the internet. The military portion of ARPANET was moved onto MILNET.
- 1986:** The U.S. National Science Foundation (NSF) launched NSFNET, the first large-scale network using internet technology.
- 1988:** Internet Relay Chat (IRC) was developed by Finnish student Jarkko Oikarinen, enabling people to communicate via the internet in "real time."
- 1988:** A worm crafted by Cornell Univ. computer science graduate student Robert Morris Jr. infected thousands of computers, shutting many down and causing millions of dollars of damage—the first

known case of large-scale damage caused by a computer virus spread via the internet.

1989: Massachusetts-based The World—the first commercial internet service provider supplying dial-up access—debuted.

1989-90: English scientist Tim Berners-Lee invented the World Wide Web. Created as an environment in which scientists at the European Center for Nuclear Research in Switzerland could share information, it gradually evolved into a medium with text, graphics, audio, animation, and video.

1990: ARPANET was disbanded.

1991: NSFNET was opened to commercial traffic. Berners-Lee introduced the first browser, or software for accessing the web.

1993: The National Center for Supercomputing Applications (U.S.) released versions of Mosaic, the first web browser able to present both text and images on a single page.

1993: A coffee pot at England's Cambridge Univ. became the subject of the first live streaming (and the first webcam).

1994: Netscape Communications released the Netscape Navigator browser.

1995: Microsoft released its Internet Explorer browser. It initially failed to make a dent in Netscape's dominance of the browser market, but Internet Explorer surpassed Netscape by 1999.

1995: Amazon and AuctionWeb (now eBay) began operating online.

1997: The initial version of the WiFi network protocol was released.

1998: Under a contract with the U.S. Dept. of Commerce, the nonprofit Internet Corporation for Assigned Names and Numbers (ICANN) took over the management of assigning domain names and internet protocol (IP) addresses.

1999: Release of the free Napster file-sharing service enabled users to easily exchange files containing music or other content without regard to copyright restrictions.

2000: Estonia became the first country to pass a law declaring internet access a fundamental human right of its citizens.

2004: A group of Harvard students founded social network TheFacebook (later just Facebook).

- 2004:** The Mozilla Foundation released the first official version of the open-source browser Mozilla Firefox.
- 2006:** The microblogging and social networking service Twitter was introduced.
- 2008:** Google introduced its Chrome browser. By 2012, Chrome ranked as the most widely used browser in the world, according to StatCounter.com.
- 2009:** The software for Bitcoin, the world's first "cryptocurrency," was released. It relied on cryptography and a complex decentralized public ledger to secure transactions.
- 2011:** ICANN decided to allow the use of almost any characters in any language for the names of generic top-level domains.
- 2012:** The number of Facebook users surpassed 1 bil.
- 2014:** The number of internet hosts (websites) passed 1 bil.
- 2014:** Estonia became the first country in the world to offer noncitizens "e-residency"—a government-issued transnational digital identity.
- 2016:** The leak of more than 11.5 mil documents from Panamanian law firm Mossack Fonseca, which said it was the victim of a hack, exposed large-scale offshore tax evasion.
- 2016:** Global internet traffic surpassed 1 zettabyte (1 tril gigabytes), according to networking giant Cisco.
- 2017:** The number of Facebook users surpassed 2 bil.
- 2018:** Amid growing concern over the misuse of individuals' personal data, the European Union's General Data Protection Regulation (GDPR) went into effect, providing strong safeguards governing personal data held by any organization worldwide that conducts business in Europe.
- 2018:** By year's end the proportion of the world's population using the internet had passed the 50% mark, according to the Intl. Telecommunications Union.
- 2021:** A ransomware cyberattack caused a multi-day shutdown of the Colonial Pipeline, provider of almost half the fuel supply of the U.S. East Coast.

Safety and Security on the Internet

Common sense dictates some basic security rules:

- Avoid using the same password for multiple websites. A password manager can generate passwords and then save them.
- Do not give out your phone number, address, credit card number, or other personal information unless needed for a transaction at a site you trust.
- If you feel someone is being threatening or dangerous, inform your internet service provider.
- Use protective firewall, antivirus, and antispyware software to guard your system against attacks by hackers.
- Be careful about opening email and file attachments from unknown correspondents.
- To avoid falling victim to **phishing**—which uses a forged email message, purportedly from a respectable organization, to elicit personal data—do not click on hyperlinks in emails from companies with which you do business. Phishing emails typically contain a link leading to a fabricated website resembling the site of the ostensible sender. If you want to visit a company's website, open your browser and manually enter the site's address.
- Users of so-called **peer-to-peer** (P2P) file-sharing networks or protocols should open up only part of their computer system, not their entire hard drive, to sharing.
- When manufacturers provide **patches** to solve security flaws or other problems with operating systems, web browsers, or other software, it is usually advisable to install these fixes. If a fix is not available for a serious security problem, consider switching to an alternative program.

Internet Addresses

The fundamental part of an address on the internet is called the domain. The final part of a domain name, known as the **top-level domain (TLD)**, is its most basic part. For example, .com is the top-level domain of many mainstream web addresses. So-called generic top-level domains (gTLDs) consist of three or more letters. Domain names with two letters are generally for countries or regions. Country-code TLDs (ccTLDs) are usually managed by an organization within a certain country.

Worst Data Breaches, 2010-22

Source: Upguard, Inc.

(ranked by total number of exposed data records, as of mid-2022)

Telecommunications Milestones

1753: Scottish surgeon Charles Morrison proposed using 26 electric lines, one for each letter of the alphabet, to make an electric telegraph. A letter would be indicated by charging the corresponding line, causing movement of a light object at the receiving end. Swiss scientist Georges-Louis Lesage built such a 26-line “electrostatic” system in 1774.

1837: In England, Charles Wheatstone and William Fothergill Cooke patented an electromagnetic telegraph. To indicate letters, their system used the magnetic field generated by a current to deflect compass needles. In 1839, they built the first commercial electric telegraph along a 13-mi (21-km) route.

1837: American inventor Samuel Morse filed a provisional patent application for a different type of electric telegraph that indicated letters by making marks of various lengths on paper. In 1844, he completed a 30-mi telegraph line from Washington, DC, to Baltimore, MD.

1866: The first successful transatlantic telegraph cable was laid.

- 1876:** Alexander Graham Bell applied for a U.S. patent on the telephone. In his first successful experiment, on Mar. 10, he used the device to call his assistant.
- 1901:** Italian inventor Guglielmo Marconi successfully transmitted the first transatlantic radio signal—from Cornwall, England, to Newfoundland, Canada.
- 1927:** Commercial transatlantic telephone service (via radio) began between New York and London.
- 1946:** The first commercial mobile phone service was launched, in St. Louis, MO.
- 1947:** U.S. scientists invented the transistor, thereby giving birth to a revolution in telecommunications and electronics.
- 1948:** U.S. mathematician/engineer Claude Shannon's epochal paper "A Mathematical Theory of Communication" laid the foundation for modern information theory. Its treatment of such crucial concepts as data compression and error detection and correction opened the way to digital communication.
- 1951:** The mayors of Englewood, NJ, and Alameda, CA, made the first customer-dialed long-distance telephone call, facilitated by the introduction of area codes.
- 1956:** The first transoceanic telephone cable went into service.
- 1962:** NASA launched the world's first active communications satellite, AT&T's *Telstar 1*.
- 1978:** Trials were conducted in Chicago and Newark, NJ, on a cellular approach to mobile telephony. This divided a region into a multitude of small overlapping areas, or cells, and made possible a significant increase in quality of calls and quantity of callers. Callers could be switched from one cell to another as they moved about.
- 1983:** The first commercial cellular system in the U.S. went into operation in Chicago. A similar system was also launched in the Baltimore, MD-Washington, DC, area.

- 1984:** As a result of a 1982 antitrust settlement with the U.S. government, AT&T, which handled most telephone service in the U.S., was broken up into several separate entities.
- 1994:** The first smartphone, IBM's Simon Personal Communicator, went on the market. A bricklike touchscreen device, it combined a cellular phone with such features as an address book, calendar, calculator, email and faxing capability, and games.
- 2007:** Apple released the iPhone, inaugurating an era of multifunctional smartphones.
- 2012:** By late in the year more than 1 bil smartphones of all types were in use worldwide.
- 2016:** Users of Facebook's messaging app Messenger passed the 1 bil mark.
- 2016:** Total sales of Apple's iPhone reached 1 bil units.
- 2019:** Telecommunications carriers began launching commercial "5G" (fifth generation) super-fast cellular networks, with the first large-scale deployments taking place in South Korea and the U.S.

Nations With the Most Cellphone Use, 2010-20

Net U.S. emissions³	5,916.6	5,842.0	5,215.6	-6.7

Note: Emissions given in terms of equivalent emissions of carbon dioxide (CO₂), using units of million metric tons of carbon dioxide equivalent (MMT CO₂ eq.). (1) Digestive process of ruminant animals, such as cattle and sheep, producing methane as a byproduct. (2) Includes HFCs, PFCs (perfluorocarbons), SF₆ (sulfur hexafluoride), and NF₃ (nitrogen trifluoride). (3) Total emissions minus the net sum of all emissions (i.e., sources) of greenhouse gases to the atmosphere plus removals of CO₂ (i.e., sinks or negative emissions) from the atmosphere.

Average Global Temperature and Atmospheric Carbon Dioxide, 1880-2021

Source: Goddard Institute for Space Studies, National Aeronautics and Space Administration, via Earth Policy Institute; National Centers for Environmental Information, National Oceanic and Atmospheric Admin. (NOAA), U.S. Dept. of Commerce

Note: NOAA uses temperature anomalies (departures from the reference value of 20th-century average temperature) rather than absolute temperatures to report average global temperatures.

Climate Change Indicators in the U.S.

Source: U.S. Environmental Protection Agency (EPA)

In May 2021, the EPA's "Climate Change Indicators in the United States" resource (<https://www.epa.gov/climate-indicators>) relaunched, presenting compelling and clear evidence of changes to climate reflected in rising temperatures, droughts, heat waves, ocean acidity, river flooding, sea level rise, and wildfires, among other indicators. The indicators show:

- Global Temperature: Since 1880, when thermometer-based observations began, 2016 was the warmest year on record,

2020 was the second warmest, and 2010-2020 was the warmest decade.

- Arctic Sea Ice: The Sept. 2020 sea ice extent was the second smallest on record. It was more than 900,000 square miles—a difference 3.5 times the size of Texas—less than the historical (1981-2010) average for that month.
- Coastal Flooding: Tidal flooding became more frequent at most locations along the East and Gulf Coasts.
- Heat Waves in U.S. Cities: Frequency of heat waves increased steadily, from an average of two heat waves per year during the 1960s to six per year during the 2010s.
- Ice Sheets: Since 1992, Greenland and Antarctica both lost more than 100 bil metric tons of ice per year on average. The loss accounted for about one-third of observed global sea level rise between 2006 and 2015.
- Length of Growing Season: The average length of the growing season in the contiguous 48 states increased by more than two weeks since the beginning of the 20th century.
- Marine Species Distribution: In conjunction with warming ocean waters, many marine species off U.S. coasts shifted northward and moved to deeper waters.
- Sea Level: Sea level (relative to the land) rose along much of the U.S. coastline between 1960 and 2020, particularly the Mid-Atlantic coast and parts of the Gulf Coast, where some stations registered increases of more than 8 in.

Air Pollution in Selected World Cities, 2017-21

Source: IQAir

Particulate matter refers to extremely small particles and liquid droplets in the air that come from vehicle exhaust, burning of fuels, dust, cooking, tobacco smoke, and chemical reactions in the atmosphere. Particulates 2.5 microns or less in diameter (PM_{2.5}) are capable of reaching deep into the respiratory tract and can cause or worsen heart and lung diseases. The World Health Org. (WHO) estimates that exposure to ambient (outdoor) air pollution causes 4.2 mil deaths worldwide every year. Data in this table show the annual

average PM2.5 concentration measured in $\mu\text{g}/\text{m}^3$. In 2021, the WHO cut the recommended annual PM2.5 concentration from 10.0 to 5.0, with the goal of preventing millions of deaths; around 99% of the world's population lives in places where air quality levels exceed these limits.

Municipal Solid Waste, 2018

Source: U.S. Environmental Protection Agency

In 2018, Americans generated about 292.4 mil tons of refuse collected as municipal solid waste (MSW). Of that MSW, paper represented 23.1%; food 21.6%; plastics 12.2%; yard trimmings 12.1%; rubber, leather, and textiles 8.9%; metals 8.8%; wood 6.2%; glass 4.2%; and other material 2.9%. About 32.1%, or 94 mil tons, was recycled or composted; nearly half of recycled/composted materials consisted of paper and paperboard.

Renewable Water Resources, 2018

Source: Food and Agriculture Organization (FAO), United Nations

Globally, water supplies are abundant, but they are unevenly distributed among and within countries. In some areas, water

withdrawals are so high, relative to supply, that surface water supplies are shrinking, and groundwater reserves are being depleted faster than they can be replenished by precipitation. According to the FAO, the U.S. (including Alaska and Hawaii) has 8,615 cubic meters per capita and 2,818 cubic kilometers of internal renewable water resources total.

The tables below take into account only countries for which data are available, draw upon studies done over a number of years, and use 2018 population data. Numbers represent each country's internal resources. Countries ranked by per capita figures.

Countries With Greatest Internal Water Resources

Country	Cubic m per capita	Total cubic km
Iceland	504,881	170.0
Guyana	309,369	241.0
Suriname	171,878	99.0
Bhutan	103,395	78.0
Papua New Guinea	93,071	801.0
Gabon	77,385	164.0
Canada	76,872	2,850.0
Canada	76,872	2,850.0
Norway	71,563	382.0
New Zealand	68,942	327.0
Solomon Islands	68,468	44.7

Countries With Lowest Internal Water Resources

Country	Cubic m per capita	Total cubic km
Kuwait	0.0	0.0
Bahrain	2.55	0.004
Egypt	10.16	1.0
United Arab Emirates	15.57	0.15
Qatar	20.13	0.056

Largest Trees in the U.S., 2021

Source: American Forests

Nearly 900 native and naturalized species of trees grow in the U.S. The trunk of the world's largest known living tree, the General Sherman giant sequoia in California, weighs almost 1,400 tons—about as much as 15 adult blue whales. To determine the country's largest trees (or “national champions”), American Forests uses a point system whereby trunk circumference, or girth at 4.5 ft above ground level (in inches) + height (in feet) + ¼ average crown spread (in feet) = total points.

Tree type	Location	Girth at 4.5 ft (in.)	Height (ft)	Crown spread (ft)	Total points
Giant sequoia (Gen. Sherman tree)	Tulare, CA	1,231	275	107	1,533
Coast	Del Norte, CA	950	321	75	1,290
Sitka spruce	Grays Harbor, WA	740	191	80	951
Western redcedar	Clallam, WA	746	164	48	922
Coast 1	Grays Harbor, WA	581	294	66	891

METEOROLOGY

National Weather Service Watches and Warnings

Source: National Weather Service, National Oceanic and Atmospheric Admin. (NOAA), U.S. Dept. of Commerce; *Glossary of Meteorology*, American Meteorological Society

The National Weather Service issues watches, warnings, and advisories for specific geographic areas to alert people to the possibility or imminent arrival of severe weather or of flooding. Often the weather hazard is a convective storm (a storm involving upward and downward movement of heat and moisture). A severe thunderstorm or tornado watch is issued when a severe convective storm, covering a relatively small geographic area or moving in a narrow path, is sufficiently intense to threaten life and property. Excessive localized convective rains are not classified as severe storms but are often the product of severe local storms. Such rainfall may result in phenomena, such as flash floods, that threaten life and property. Lightning occurs with all thunderstorms and, along with flash floods, is a leading cause of storm deaths and injuries.

Cyclone: Atmospheric circulation of winds rotating counterclockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere. Tornadoes, hurricanes/typhoons, and the lows shown on weather maps are all examples of cyclones. Cyclones are usually accompanied by precipitation or stormy weather.

Severe thunderstorm: Thunderstorm (a local storm produced by a cumulonimbus cloud) that produces a tornado, winds of at least 50 knots (58 mph), and/or hail at least 1 in. in diameter. A severe thunderstorm watch indicates conditions are favorable for the development of a severe thunderstorm within 4 to 8 hours. A severe thunderstorm warning indicates a severe thunderstorm has been sighted by radar or reported by a spotter.

Tornado: Violently rotating column of air that extends from the base of a thunderstorm to the ground. On a local scale, it is the most destructive of all atmospheric phenomena. A tornado path can exceed 1 mi wide and 50 mi long and is generally less than 1.25 mi in diameter. The average forward speed is 30 mph, and wind speeds can reach 300 mph. A rotating column of air over water is called a **waterspout**.

Tropical storm: Cyclone that develops over tropical or subtropical waters with 1-min. sustained surface winds between 34 and 63 knots (39-73 mph). A tropical storm watch is issued when tropical storm conditions pose a threat to specified coastal areas within 48 hours. A tropical storm warning is issued when such conditions are expected in a specified coastal area within 36 hours.

Hurricane: Tropical cyclone having 1-min. sustained surface winds of 64 knots (74 mph) or more. (In the western North Pacific Ocean, west of the International Date Line, such storms are known as **typhoons**.) The hurricane-force winds form a circle or oval, sometimes as wide as 300 mi in diameter. In the lower latitudes, hurricanes usually move W or NW at 10-15 mph. When the center approaches 25° to 30° N, the direction of motion often changes to the NE, with increased forward speed. In the Atlantic, hurricane season is June 1-Nov. 30. Hurricane season is May 15-Nov. 30 in the eastern Pacific. A hurricane warning is issued when a hurricane is forecast for an area within 36 hours.

Winter storm and blizzard: A winter storm watch is issued when there is a potential for heavy snow or significant ice accumulations, usually at least 24-36 hours in advance. A winter storm warning is issued when a winter storm is producing or is forecast to produce heavy snow or significant ice accumulations. A blizzard warning is issued for winter storm conditions in which winds are 35 mph or more, there is sufficient falling and/or blowing snow to frequently reduce visibility to less than ¼ mi, and the conditions are expected to prevail for at least 3 hours.

River flooding: Occurs when rains, sometimes coupled with melting snow, quickly fill river basins with an excess of water. Torrential rains from decaying hurricanes or tropical systems are also

a major cause. **Coastal flooding:** Tropical storm and hurricane winds or intense offshore low-pressure systems can drive ocean water inland. Coastal floods can also be produced by sea waves called **tsunamis**, produced by earthquakes or underwater volcanic eruptions or landslides. **Flash flooding:** Usually due to copious amounts of rain falling in a short time. Ice can also cause flash flooding. When ice accumulates at natural or artificial obstructions, it can stop the flow of water. The resulting buildup of water can lead to flooding upstream. If the jam suddenly gives way, a flash flood can happen downstream. Flash flooding typically occurs within 6 hours of the causative event.

Flash floods account for the majority of flood deaths in the U.S. and are the leading cause of deaths associated with thunderstorms. Urbanization significantly increases runoff because less rain is absorbed by the terrain, making flash flooding in urban areas extremely dangerous. Streets can become swift-moving rivers, and basements can fill with water.

A flash flood watch indicates flooding or flash flooding is possible within a designated area. A flash flood warning indicates flooding is in progress, imminent, or highly likely.

National Weather Service Marine Warnings and Advisories

Primary sources of dissemination are mobile apps and push notifications, commercial radio, TV, U.S. Coast Guard radio, and National Oceanic and Atmospheric Admin. (NOAA) VHF radio broadcasts. The NOAA Weather Radio All Hazards (NWR) network broadcasts on seven frequencies between 162.400 and 162.550 MHz. These broadcasts can usually be received within about 40 mi of the transmission site using a special radio receiver. The following are examples of the warnings and advisories that may be addressed to mariners.

Small craft advisory: Alerts mariners to sustained weather and/or sea conditions, present or forecast, potentially hazardous to small boats, including winds 20-33 knots (23-38 mph) and/or

dangerous wave conditions. The advisory is also issued when sea or lake ice exists that could be hazardous to small boats. Criteria vary depending on region and type of marine environment.

Special marine warning: Indicates potentially hazardous weather conditions not covered by existing marine warnings. The conditions are usually of short duration (2 hr. or less) and involve wind speeds of 34 knots (39 mph) or more, and/or hail at least $\frac{3}{4}$ in. in diameter or waterspouts.

Gale warning: Indicates winds of 34-47 knots (39-54 mph) not directly associated with a tropical storm are forecast for the area.

Storm warning: Indicates winds 48-63 knots (55-73 mph) not directly associated with a tropical storm are forecast for the area.

Hurricane and Tornado Classifications

Source: National Weather Service, NOAA, U.S. Dept. of Commerce

The Saffir-Simpson Hurricane Wind Scale, created by Herbert Saffir and expanded upon by Robert Simpson, rates a hurricane's intensity from 1 to 5. The scale, updated in 2012, provides examples of the type of damage and impacts associated with winds of the indicated intensity. The Fujita (or F) Scale was created by T. Theodore Fujita in 1971 to classify tornadoes. The Enhanced Fujita Scale, an update, was implemented in the U.S. in 2007. It uses 3-sec. gusts estimated at the point of damage based on a judgment of eight levels of damage to 28 indicators.

Saffir-Simpson Hurricane Wind Scale		
Category	Wind speed ¹	Summary of damage
1	74-95 mph	Very dangerous winds will produce some damage.
2	96-110 mph	Extremely dangerous winds will cause extensive damage.
3	111-129 mph	Devastating damage will occur.
4	130-156 mph	Catastrophic damage will occur.
5	157 mph or higher	Catastrophic damage will occur.

Enhanced Fujita Scale (Tornadoes)	
Rank	3-sec. gust
EF-0	65-85 mph
EF-1	86-110 mph
EF-2	111-135 mph
EF-3	136-165 mph
EF-4	166-200 mph
EF-5	Over 200 mph

(1) 1-min. sustained winds.

Monthly Normal Mean Temperatures, Precipitation in U.S. Cities

Source: National Centers for Environmental Information, NESDIS,
NOAA, U.S. Dept. of Commerce

Normals are averages covering a 30-year period. The temperature and precipitation normals given here are based on records for 1991-2020. Temperatures listed below represent means of the normal daily maximum and normal daily minimum temperatures for each month. (*) = City station. Other figures are for airport stations. T = Temperature in Fahrenheit; P = Precipitation in inches.

Normal High and Low Temperatures, Precipitation in U.S. Cities

Source: National Centers for Environmental Information, NESDIS,
NOAA, U.S. Dept. of Commerce

The normal temperatures and precipitation data given here are based on records for the period 1991-2020. The extreme temperatures are based on records from the time of each station's installation, through 2020. (*) = City station. Other figures are for airport stations.

Tropical Cyclone Names in 2023

Source: National Hurricane Center, Central Pacific Hurricane Center, NOAA, U.S. Dept. of Commerce; World Meteorological Org.

NOAA's National Hurricane Center began using name lists in 1953. Presently, six lists, maintained by the World Meteorological Org., are used in rotation. If there are more than 21 named storms in one season, storms take names from supplemental lists, established by the WMO in 2021. Previously, the Greek alphabet had been used if a list was exhausted in a given season (this happened in 2005 and 2020).

Atlantic: Arlene, Bret, Cindy, Don, Emily, Franklin, Gert, Harold, Idalia, Jose, Katia, Lee, Margot, Nigel, Ophelia, Philippe, Rina, Sean, Tammy, Vince, Whitney.

Atlantic (supplemental): Adria, Braylen, Caridad, Deshawn, Emery, Foster, Gemma, Heath, Isla, Jacobus, Kenzie, Lucio, Makayla, Nolan, Orlanda, Pax, Ronin, Sophie, Tayshaun, Viviana, Will.

Eastern North Pacific: Adrian, Beatriz, Calvin, Dora, Eugene, Fernanda, Greg, Hilary, Irwin, Jova, Kenneth, Lidia, Max, Norma, Otis, Pilar, Ramon, Selma, Todd, Veronica, Wiley, Xina, York, Zelda.

Eastern North Pacific (supplemental): Aidan, Bruna, Carmelo, Daniella, Esteban, Flor, Gerardo, Hedda, Izzy, Jacinta, Kenito, Luna, Marina, Nancy, Ovidio, Pia, Rey, Skylar, Teo, Violeta, Wilfredo, Xinia, Yariel, Zoe.

Wind Chill Temperature

Source: National Weather Service, NOAA, U.S. Dept. of Commerce

Temperature and wind combine to cause heat loss from body surfaces. For example, when the air temperature is 5°F, a 10-mph wind can cause body heat loss equal to that which could occur when the air temperature is –10°F with no wind. In other words, a 10-mph wind can make 5°F feel like –10°F. Wind speeds greater than 45 mph have little additional chilling effect. Direct sunlight can increase the wind chill temperature 10°F to 15°F. When the wind chill

temperature falls within the shaded areas, frostbite can occur on exposed skin in the times indicated or less.

Wind speed (mph)	Calm	Air temperature (°F)								
		40	35	30	25	20	15	10	5	0
		Wind chill temperature (°F)

Heat Index

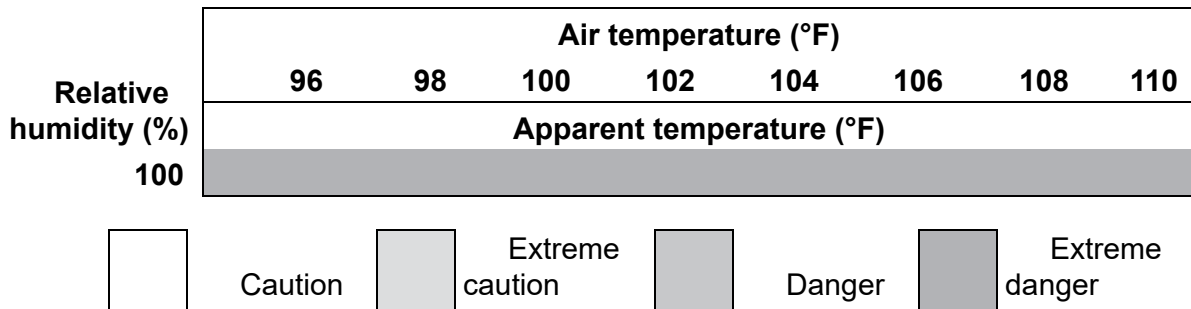

Source: National Weather Service, NOAA, U.S. Dept. of Commerce

The heat index, or apparent temperature, is a measure of how hot it feels when the relative humidity is factored in with the actual air temperature. For example, when air temperature is 100°F, and

relative humidity is 50%, it can feel as if it's 118°F with no humidity. Full sunlight can make one feel even hotter. On the chart, the shaded areas indicate the likelihood of heat disorders with prolonged exposure or strenuous activity.

Relative humidity (%)	Air temperature (°F)							
	80	82	84	86	88	90	92	94
	Apparent temperature (°F)							
40	80	81	83	85	88	91	94	97

Ultraviolet (UV) Index Forecast

Source: National Weather Service (NWS), NOAA, U.S. Dept. of Commerce; U.S. Environmental Protection Agency (EPA); U.S. Food and Drug Administration, U.S. Dept. of Health and Human Services; World Health Organization

The NWS and EPA developed and began offering a UV index in 1994 in response to increasing incidences of skin cancer, cataracts, and other effects from exposure to the sun's harmful rays. In 2004, they adapted their index to the Global Solar UV Index sponsored by the World Health Organization. The UV index is now a regular element of NWS atmospheric forecasts. To see the UV index for a given location, visit www.epa.gov/enviro/uv-index-search.

The UV index, ranging from 0 to 11+, is an indication of the expected intensity of UV radiation reaching the Earth's surface during the solar noon hour (the time of day, dependent on location and time of year, when the sun appears to have reached its highest point in the sky). The lower the UV index value, the less the expected radiation. The UV index forecast is produced daily for 58 cities by the NWS Climate Prediction Center.

UV levels are influenced by the following:

Ozone. Ozone, a form of oxygen, the molecules of which consist of three atoms rather than two, absorbs UV radiation. The more ozone, the lower the UV radiation at the surface.

Time of day. UV radiation is highest at midday (when the sun peaks in the sky) and is lower in the early morning and late afternoon.

Cloud cover. UV radiation levels are highest under cloudless skies. Even with cloud cover, UV radiation levels can be high due to

the scattering of UV radiation by water molecules and fine particles in the atmosphere.

Ground reflection. Reflective surfaces intensify UV exposure. Water reflects about 10% of UV radiation that reaches it; sand, 15%; and snow, as much as 80%.

Altitude. At higher altitudes, a thinner atmosphere filters less UV radiation. For every 1,000 ft (305 m) one travels above sea level, UV levels increase by 2%.

Latitude. The closer a location is to the equator, the higher the UV radiation level.

Seasons. UV radiation is highest in spring and summer, drops in fall, and is lowest in winter.

Land cover. Structures and trees lessen exposure to UV radiation.

Using the UV Forecast

UV Index	Exposure	Protective actions
0-2	Low	Sunglasses on bright days, SPF 30+ sunscreen, cover up if you burn easily
3-5	Moderate	Seek shade during midday hours; hat, sunglasses; sunscreen
6-7	High	Seek shade during midday hours; protective clothing, hat, sunglasses, sunscreen
8-10	Very high	If outside 10 AM-4 PM, seek shade; wear protective clothing, hat, sunglasses, sunscreen; avoid bright surfaces
11+	Extreme	If outside 10 AM-4 PM, seek shade; wear protective clothing, hat, sunglasses, sunscreen; avoid bright surfaces

Lightning

Source: National Weather Service, NOAA, U.S. Dept. of Commerce

Lightning is a powerful electric discharge, or spark, that can occur in the atmosphere when an imbalance of positive and negative charges develops. It can travel within a cloud, between clouds, between a cloud and clear sky, or between a cloud and the ground. Lightning generally accompanies rainstorms, but it can also be seen with snowstorms, volcano eruption clouds, and violent forest fires. In a common form of cloud-to-ground lightning, a negatively charged area in a thunderstorm sends charges down toward positively charged objects. Lightning can travel miles away from the area of a storm.

The transfer of charges in lightning generates a huge amount of heat, sending the temperature in the channel to 50,000°F or more and causing the air within it to expand rapidly. The sound of that expansion is thunder. Sound travels more slowly than light, so lightning is usually observed before thunder is heard.

An estimated 25 mil cloud-to-ground lightning bolts happen in the U.S. each year. They killed an annual average of 37 people in 1992-2021. This is a small number compared to U.S. deaths from fire (3,800 in 2021) and motor vehicle crashes (about 40,000 annually in recent years), but it is still significant. In comparison, tornadoes caused an average of 71 deaths a year and hurricanes an average of 45 over the same 30-year time period. According to the National Weather Service, 11 people were struck and killed by lightning in 2021; 69 more were injured.

Most lightning deaths and injuries occur in summer when people are outdoors. If outdoors, one should run to a safe building or vehicle when thunder is first heard, lightning is seen, or dark threatening clouds are observed developing overhead. Even while indoors, one is advised to stay away from windows and doors and to avoid contact with anything conducting electricity, including corded phones, computers and other electrical equipment, and tubs, showers, and

other plumbing. One should stay inside until 30 min. after the last occurrence of lightning or thunder.

More information about lightning can be found online at <https://www.weather.gov/safety/lightning>

Global Temperature Extremes and Precipitation Records

Australia	–9.4	Charlotte Pass, New South Wales	5,758	June 29, 1994

Highest Measured Average Annual Precipitation Extremes

Continent/area	Highest avg. (in.) ¹	Place	Elevation (ft)	Years in averaging period
Asia	467.4	Mawsynram, India	4,695	38
Southwest Pacific	460.0	Mt. Waialeale, Kauai, HI, U.S.	5,148	30
Africa	405.0	Debundscha, Cameroon	30	32
South America	354.0 ²	Quibdo, Colombia	230	29
Australia	316.3	Bellenden Ker, Queensland	5,102	34
North America	276	Henderson Lake, British Columbia, Canada	12	15
Europe	180.8	Crkvice, Montenegro	3,461	30
Antarctica	>31.5 ³	Along coast of E and W and over the Antarctic Peninsula		34

(1) Official greatest average annual precipitation. (2) The frequently cited record of 523.6 in. in Lloro, Colombia (14 mi SE and at a higher elevation than Quibdo) is an estimate. (3) Water equivalent. (4) July 1996-June 1999.

Lowest Measured Average Annual Precipitation Extremes

Continent/area	Lowest avg. (in.) ¹	Place	Elevation (ft)	Years in averaging period
South America	0.03	Arica, Chile	213	59
Antarctica	0.08	Amundsen-Scott South Pole Station (U.S.)	9,301	10
Africa	<0.1	Wadi Halfa, Sudan	590	39
North America	1.2	Batagues, Mexico	69	14
Asia	1.8	Aden, Yemen	63	50
Southwest Pacific	4.05	Troudaninna, Australia	46	42
Continental Europe	6.4	Astrakhan, Russia	66	25

(1) Official lowest average annual precipitation.

OCEANOGRAPHY

Tides and Their Causes

Source: National Ocean Service, NOAA, U.S. Dept. of Commerce

The tides are natural phenomena involving the movement of waves in the Earth's large fluid bodies as a result of the gravitational attraction of the sun and moon. These two variable influences combined produce the complex recurrent cycle of the tides. Tides may occur in both oceans and seas; to a limited extent in large lakes and in the atmosphere; and, to a very minute degree, in the Earth itself. The length of time between succeeding tides can vary.

The tide-generating force represents the difference between (1) the centrifugal force produced by Earth's revolution around the common center of gravity of the Earth-moon system and (2) the gravitational attraction of the moon acting upon the Earth's overlying waters. The moon is about 390 times closer to Earth than is the sun. So despite its smaller mass, the moon's tide-raising force is two times greater.

The tide-generating forces of the moon and sun acting tangentially to the Earth's surface tend to cause a maximum accumulation of waters at two diametrically opposite points on the Earth's surface and to withdraw compensating amounts of water

from all points 90° removed from these tidal bulges. As the Earth rotates beneath the maxima and minima of these tide-generating forces, a sequence of two high tides, separated by two low tides, is produced each lunar day (24 hr. and 50 min., the time it takes for a specific site on the Earth to rotate from an exact point under the moon to the same point under the moon) in what is called a **semidiurnal tide**. Each ocean basin reacts differently to tidal forces.

Twice each month, when the sun, moon, and Earth are directly aligned—the moon between the Earth and sun (at new moon) or on the opposite side of Earth from the sun (at full moon)—the sun and moon exert gravitational forces in a mutual or additive fashion. The highest high tides and lowest low tides, called **spring tides**, are produced at these times. At two positions 90° in between, the moon and sun's gravitational forces—imposed at right angles—counteract each other to the greatest extent, and the range between high and low tides is reduced, resulting in **neap tides**.

The inclination of the moon's monthly orbit and of the sun to the equator during Earth's yearly passage through its orbit produce a difference in the height of succeeding high and low tides, known as the diurnal inequality. In most cases, this produces a so-called **mixed tide**. In extreme cases, these phenomena may result in a **diurnal tide**, with only one high tide and one low tide each day. There are other monthly and yearly variations in the tides because of the elliptical shape of the orbits.

The range of tides in the open ocean is generally less than in the coastal regions, where the incoming tide can be augmented by the continental shelves, as well as by bays and estuaries. The largest tidal ranges in the world occur in the Bay of Fundy, Canada, where the range of tide reaches 53 ft. The highest tides in the U.S. occur near Anchorage, AK, with tidal ranges up to 40 ft.

In every case, actual high or low tide can vary considerably from the average as a result of weather conditions such as strong winds, abrupt barometric pressure changes, or prolonged periods of extreme high or low pressure.

Mean Ranges of Tide

Note: Mean range is the difference in height between mean high water and mean low water.

El Niño and La Niña

Source: National Weather Service, NOAA, U.S. Dept. of Commerce

El Niño is a climatically significant disruption of the ocean-atmosphere system characterized by large-scale weakening of trade winds and warming of surface layer waters in the central and eastern equatorial Pacific. The term *El Niño*, Spanish for “the little boy” or “the Christ Child,” was originally used by fishing crews to refer to a warm ocean current that appeared around Christmas off the west

coast of Ecuador and Peru lasting several months. The term has come to be reserved for exceptionally strong warm currents that bring heavy rains.

El Niño events generally occur at irregular intervals of two to seven years, at an average of once every three to four years. They typically last 12 to 18 months. The intensity of El Niño events varies depending on the area encompassed by the abnormally warm ocean temperatures. Some are strong, such as in 1982-83, 1997-98, and 2015-16. Others are considerably weaker, such as the 2018-19 event. The eastward extent of warmer-than-normal water varies from episode to episode.

El Niño influences weather around the globe, and its impacts are most clearly seen in the winter. During El Niño years, winter temperatures in the continental U.S. tend to be warmer than normal in the northern states and on the West Coast and cooler than normal in the Southeast. Conditions tend to be wetter than normal over central and southern California, the Southwest, and across much of the South, and drier than normal over the northern portions of the Rocky Mountains and in the Ohio Valley. Globally, El Niño brings wetter than normal conditions to Peru and Chile and dry conditions to Australia and Indonesia. It should be noted that El Niño is only one of a number of factors influencing seasonal variations of climate.

La Niña (“the little girl”) is characterized by colder than normal sea surface temperatures in the equatorial Pacific. La Niña typically brings wetter, cooler conditions to the Pacific Northwest and drier, warmer conditions to much of the southern U.S. El Niño and La Niña are opposite phases of the El Niño-Southern Oscillation (ENSO) cycle, which involves a shift in tropical sea-level pressure between the Eastern and Western Hemispheres.

NOAA and other agencies monitor these events using satellites, weather balloons, and buoys in the Pacific Ocean. Numerical computer models of the ocean and atmosphere use these data to predict the onset and evolution of El Niño and La Niña. La Niña conditions were expected in the Northern Hemisphere through fall 2022 and likely to decrease through winter 2022-23.

DISASTERS

U.S. Weather and Climate Disasters by Type, 1980-2021

Source: National Centers for Environmental Information, National Oceanic and Atmospheric Admin., U.S. Dept. of Commerce

Does not include disasters causing under \$1 billion in 2022 consumer price index-adjusted losses. The worst year for billion-dollar disasters in this period was 2017, with \$354.8 billion (CPI-adjusted) in damages from events including Hurricanes Harvey, Irma, and Maria. It easily surpassed the previous U.S. annual record of \$240.6 billion, established in 2005. As of Apr. 8, 2022.

Disaster type	Number of events	Losses (bil)	Percent of total losses	Average cost (bil)	Deaths
Drought	29	\$291.1	13.2%	\$10.0	4,139 ¹
Flooding ²	36	168.4	7.7	4.7	634
Freeze	9	33.7	1.5	3.7	162
Severe storm	152	344.8	15.7	2.3	1,972
Tropical cyclone	57	1,157.1	52.6	20.3	6,708
Wildfire	20	123.6	5.6	6.2	418
Winter storm	20	81.0	3.7	4.1	1,314
All disasters	323	2,199.7	100.0	6.8	15,347

Note: Tropical cyclones include hurricanes, tropical storms, tropical depressions, and associated storm surges and flooding. (1) Drought-associated deaths are the result of heat waves, which do not always occur with droughts. (2) Does not include inland flood damage caused by tropical cyclone events.

U.S. Weather and Climate Disasters, 2021

Source: National Centers for Environmental Information, National Oceanic and Atmospheric Admin., U.S. Dept. of Commerce Does

not include disasters causing under \$1 billion in 2022 consumer price index-adjusted losses.

Date	Event and location	Losses (bil)	Deaths
Jan. 1-Dec. 31	Drought conditions expanded and intensified across West; heat dome and extreme temperatures, OR, WA	\$9.1	229
Jan. 24-29	Heavy rainfall caused flooding, mudslides, from southern to central CA coast	1.2	2
Feb. 10-19	Cold wave and winter storms, NE southward to TX; snow and ice, OK, AR, MO, IL, KY, TN, LA, MS, CO, OR, WA; costliest U.S. winter storm on record	24.5	262
Mar. 24-25	41+ tornadoes, incl. in KY, TN, MS, AL, GA	1.8	6
Mar. 27-28	Hail, high wind, more than two dozen tornadoes, AR, AL, GA, MS, SC, NC, VA; high wind, PA, MD, NJ; flooding, esp. in Nashville, TN	1.4	8
Apr. 12-15	Hail storms, central TX	1.6	0
Apr. 27-28	Tornadoes, high wind, flooding, large hail across central TX, OK	3.4	0
May 2-4	111+ confirmed tornadoes with high wind, hail, MS, TX, AR, AL, GA, SC, NC, TN	1.3	4
May 17-18	Flooding from torrential rainfall, LA (Baton Rouge, Lake Charles), coastal TX	1.4	5
June 1-Dec. 31	Severe drought conditions, extreme heat favorable for wildfires across CA (Dixie Fire, Caldor), CO (Marshall), OR (Bootleg), WA (Ford	10.8	8

	Corkscrew), ID (Boundary), MT (Trail Creek), AZ (Telegraph); over 7.1 mil acres burned		
June 17-18	Hail storms, high wind, OH, IL, IN, MI, WI, MN, IA, MO	1.8	0
June 24-26	Thunderstorms, high wind, hail, tornadoes in MI, IL, IN, OH, MO, KS, TX	1.3	0
July 7-9	Tropical Storm Elsa, FL, GA, NC, SC; flooding in southern New England, Long Island, NY	1.3	1
July 8-11	Severe storms, hail across Central states, incl. MO, NE, IA, SD, ND, NM, TX	1.1	0
Aug. 10-13	High wind across North Central states, incl. IL, MI, WI, IN, OH, MO	1.3	2
Aug. 16-18	Tropical Storm Fred, FL, caused torrential flooding in western NC, nearly a dozen tornadoes in Northeast	1.3	7
Aug. 29-Sept. 1	Hurricane Ida, LA; remnants led to severe weather, flash flooding from eastern PA to NY, NJ	76.5	96
Sept. 14-18	Hurricane Nicholas, TX to LA	1.1	0
Dec. 10	Tornado outbreak, AR, MO, TN, KY (Mayfield)	4.0	93
Dec. 15	Derecho and tornado outbreak, KS, NE, IA, MN, WI	1.8	1
2021 total	20 events	148.0	724

Some Notable Aircraft Disasters Since 1937

Source: National Transportation Safety Board; World Almanac
research

Particularly notable disasters are in bold. Asterisk (*) indicates number of deaths includes people on ground. As of Aug. 2022.

Date	Aircraft	Incident details, site	Deaths
1937, May 6	German zeppelin Hindenburg	Burned at mooring, Lakehurst, NJ	36*
1944, Aug. 23	U.S. Air Force B-24 Liberator bomber	Hit school, Freckleton, England, UK	61*
1945, July 28	U.S. Army B-25	Hit Empire State Building after getting lost in fog, New York, NY	14*
1952, Dec. 20	U.S. Air Force C-124	Crashed at Moses Lake, WA	87
1953, Mar. 3	Canadian Pacific DH- 106 Comet	Crashed on takeoff from Karachi, Pakistan; world's first fatal commercial passenger jet crash	11
1953, June 18	U.S. Air Force C-124	Crashed, burned near Tokyo, Japan	129
1955, Oct. 6	United Airlines DC-4	Crashed in Medicine Bow Peak, WY	66
1955, Nov. 1	United Airlines DC-6	Bomb on board exploded near Longmont, CO	44 ¹
1956, June 20	LAV (Venezuela) Super Constellation	Crashed into Atlantic off Asbury Park, NJ	74
1956, June 30	TWA Super Const., United DC-7	Collided over Grand Canyon, AZ	128
1960, Dec. 16	United DC-8, TWA Super Const.	Collided over New York, NY, killing all 128 on planes, 6 on ground	134*
1962, Mar. 16	Flying Tiger (U.S.) Super Constellation	Vanished in W Pacific en route to Philippines from Guam	107
1962, June 3	Air France Boeing 707	Crashed on takeoff from Paris, France	130
1962, June 22	Air France Boeing 707	Crashed in storm, Guadeloupe, French W Indies	113
1963, Feb. 1	Lebanese Middle East Airlines Vickers Viscount	Collided over Ankara, Turkey, killing all 17 on	104*

	754, Turkish Mil. Douglas C-47	planes, 87 on ground	
1963, Nov. 29	Trans-Canada Air Lines DC-8	Crashed after takeoff from Montréal, QC, Canada	118
1965, May 20	Pakistani Boeing 720	Crashed at airport in Cairo, Egypt	121
1966, Jan. 24	Air India Boeing 707	Crashed on Mont Blanc, France-Italy	117
1966, Feb. 4	All-Nippon Boeing 727	Plunged into Tokyo Bay, Japan	133
1966, Mar. 5	BOAC (British Overseas Airways Corp.) Boeing 707	Crashed into Mt. Fuji, Japan, after encountering severe turbulence	124
1966, Dec. 24	U.S. military-chartered CL-44	Crashed into village in S Vietnam	129*
1967, Apr. 20	Globe Air Bristol Britannia	Crashed on approach to airport, Nicosia, Cyprus	126
1967, July 19	Piedmont Boeing 727, Cessna 310	Collided over Hendersonville, NC	82
1968, Apr. 20	S. African Airways Boeing 707	Crashed on takeoff from Windhoek, Namibia	122
1968, May 3	Braniff International Electra	Crashed in storm near Dawson, TX	85
1968, May 12	U.S. Air Force Lockheed C-130B	Hit by mortar while evacuating Kham Duc Camp, S Vietnam	155
1969, Mar. 16	VIASA DC-9	Crashed after takeoff from Maracaibo, Venezuela	155 ²
1970, July 3	British-chartered DH-106 Comet	Crashed near Barcelona, Spain	112
1970, July 5	Air Canada DC-8	Crashed near Toronto Intl. Airport, ON, Canada	108
1970, Nov. 14	Southern Airways DC-9	Crashed into mountains near Huntington, WV	75 ³
1971, July 30	All-Nippon Boeing 727, Japan Air Force F-86 fighter	Collided over Morioka, Japan	162 ⁴
1971, Sept. 4	Alaska Airlines Boeing 727	Crashed into mountain near Juneau, AK	111
1972, May 18	Aeroflot Antonov 10A	Wings separated from	122

		fuselage on approach to Kharkov, USSR	
1972, June 18	British European Airways Trident-1C	Crashed near Staines after takeoff from London, Eng., UK	118
1972, Aug. 14	East German Ilyushin 62	Crashed on takeoff from East Berlin, E Germany	156
1972, Aug. 31	Aeroflot Ilyushin 18V	Crashed in field near Magnitogorsk, USSR	101
1972, Oct. 1	Aeroflot Ilyushin 18V	Crashed into Black Sea, USSR	109
1972, Oct. 13	Aeroflot Ilyushin 62	Crashed near Moscow, USSR	174
1972, Dec. 3	Spanish-chartered Convair CV-990	Crashed on takeoff from Canary Islands, Spain	155
1972, Dec. 29	Eastern Airlines Lockheed L-1011 TriStar	Crashed on approach to Miami Intl. Airport, FL	99
1973, Jan. 22	Nigerian-chartered Boeing 707	Burst into flames upon landing at Kano Airport, Nigeria	176
1973, Feb. 21	Libyan Arab Boeing 727	Flew off course, shot down by Israeli fighter planes over Sinai Desert	108
1973, Apr. 10	Invicta Airlines (UK) Vickers Vanguard	Crashed during snowstorm on approach to Basel, Switzerland	108
1973, June 3	Soviet Supersonic Tu-144	Crashed near Goussainville, France	145
1973, July 11	Varig Airlines (Brazil) Boeing 707	Crashed on approach to Orly Airport, Paris, France	123
1973, July 31	Delta Airlines DC-9	Crashed while attempting landing in fog, Logan Airport, Boston, MA	89
1973, Sept. 30	Aeroflot Tupolev 104B	Crashed after takeoff from Sverdlovsk, USSR	108
1973, Oct. 13	Aeroflot Tupolev 104B	Crashed on approach to Moscow, USSR	122
1973, Dec. 22	Royal Air Maroc SE 210 Caravelle VIN	Flew into side of a mountain near Tangier, Morocco	106

1974, Mar. 3	Turkish DC-10	Improperly closed cargo door caused crash, nr. Paris, France	346
1974, Apr. 22	Pan American (U.S.) Boeing 707	Crashed in Bali, Indonesia	107
1974, Apr. 27	Aeroflot Ilyushin 18V	Crashed after takeoff from Leningrad, USSR	109
1974, Dec. 1	TWA Boeing 727	Crashed on approach in storm, Upperville, VA	92
1974, Dec. 4	Dutch-chartered DC-8	Crashed in storm near Colombo, Sri Lanka	191
1975, Apr. 4	U.S. Air Force Galaxy C-5A	Crashed on takeoff nr. Saigon, S Vietnam; carried orphans	155
1975, June 24	Eastern Airlines 727	Crashed in storm, JFK Airport, New York, NY	113
1975, Aug. 3	Alia Royal Jordanian Boeing 707	Hit mountainside in heavy fog near Agadir, Morocco	188
1975, Aug. 20	Czechoslovakian Air Ilyushin 62	Crashed on approach to Damascus, Syria	126
1976, Mar. 6	Aeroflot Ilyushin 18E	Crashed between Moscow, USSR, and Yerevan, Armenia	111
1976, Sept. 10	British Airways Trident, Inex Adria DC-9	Collided near Zagreb, Yugoslavia	176
1976, Sept. 19	Turkish Boeing 727	Hit mountain in southern Turkey	154
1976, Oct. 6	Cubana Airlines DC-8	Bombs set by anti-Castro Cuban exiles detonated mid-flight	73
1976, Oct. 13	Lloyd Aero Boliviano Boeing 707	Crashed into soccer field after takeoff from Santa Cruz, Bolivia	916
1977, Mar. 27	KLM (Neth.) 747, Pan Am (U.S.) 747	Collided on foggy runway, Tenerife, Canary Islands, Spain	583
1977, Nov. 19	TAP Portugal Boeing 727	Crashed in Madeira, Portugal	131
1977, Dec. 4	Malaysian Airlines Boeing 737	Hijacked and forced to fly to Singapore, crashed near Johor Strait	100

1978, Jan. 1	Air India 747	Crashed into sea after takeoff from Bombay, India	213
1978, Sept. 25	Pacific SW Air Boeing 727, Cessna 172	Collided over San Diego, CA	144*
1978, Nov. 15	Indonesian-chartered DC-8	Crashed on approach to airport, Colombo, Sri Lanka	183
1979, May 25	American Airlines DC-10	Crashed after takeoff from O'Hare Airport, Chicago, IL; highest death toll in U.S. aviation history	275*
1979, Aug. 11	Aeroflot/Moldova Tu-134, Aeroflot Tu-134	Collided over Ukraine	178
1979, Nov. 26	Pakistani Boeing 707	Crashed near Jidda, Saudi Arabia	156
1979, Nov. 28	Air New Zealand DC-10	Crashed into Mt. Erebus during Antarctica flyover	257
1980, Mar. 14	PLL LOT Ilyushin 62	Crashed making emergency landing, Warsaw, Poland	877
1980, Apr. 25	Dan-Air Services (UK) Boeing 727	Crashed into mountain, Tenerife, Canary Islands, Spain	146
1980, July 8	Aeroflot Tupolev 154B	Crashed after takeoff from Alma-Ata, USSR	166
1980, Aug. 19	Saudi Arabian Lockheed TriStar	Returned to Riyadh airport after fire on board; evacuation delayed	301
1981, Dec. 1	Inex Adria (Yugoslavia) DC-9	Crashed into mountain on island of Corsica, France	180
1982, Jan. 13	Air Florida Boeing 737	Crashed into bridge, Potomac R. after takeoff from Washington, DC	78*
1982, June 8	VASP (Brazil) Boeing 727	Crashed into mountain near Fortaleza, Brazil	137
1982, June 28	Aeroflot Yakovlev 42	Crashed near Mozyr, USSR	132
1982, July 9	Pan Am Boeing 727	Crashed after takeoff from Kenner, LA, near New Orleans	153*

1983, July 11	Ecuadorean Boeing 737	Inexperienced pilot crashed into hill near Cuenca, Ecuador	119
1983, Sept. 1	S. Korean Boeing 747	Shot down after entering restricted Soviet airspace near Sakhalin; plane apparently misidentified	269
1983, Sept. 23	Gulf Air Boeing 737	Bomb exploded in cargo hold over Mina Jebel Ali, UAE	112
1983, Nov. 27	Avianca Boeing 747	Crashed near Barajas Airport, Madrid, Spain	181
1984, Oct. 11	Aeroflot/East Siberia Tu-154	Crashed into vehicles on runway while landing in poor weather, Omsk, Russia	178*
1985, Feb. 19	Spanish Boeing 727	Crashed into Mt. Oiz, Spain	148
1985, June 23	Air India Boeing 747	Crashed into Atlantic off Ireland after bomb allegedly set by Sikh extremists detonated on board	329
1985, July 10	Aeroflot Tupolev 154B	Crashed after takeoff from Uzbekistan, USSR	200
1985, Aug. 2	Delta Air Lines Lockheed L-1011 TriStar	Crashed after encountering microburst near Dallas-Ft. Worth Airport, TX	135*
1985, Aug. 12	Japan Air Lines Boeing 747	Crashed into Mt. Ogura, Japan; world's worst single-plane disaster	520
1985, Dec. 12	Arrow Air (U.S.) DC-8	Crashed after takeoff from Gander, NL, Canada	256 ⁸
1986, Mar. 31	Mexican Boeing 727	Crashed NW of Mexico City, Mexico	167
1986, Aug. 31	Aeromexico DC-9, Piper PA-28	Collided over Cerritos, CA	82*
1987, May 9	Polish IL-62M	Crashed after takeoff from Warsaw, Poland	183
1987, Aug. 16	Northwest Airlines MD-	Crashed after takeoff	156

	82	from Romulus, MI	
1987, Nov. 28	S. African Boeing 747	Crashed into Indian Ocean near Mauritius	159
1987, Nov. 29	Korean Air Boeing 707	Bomb planted by 2 N. Korean agents exploded while plane over Andaman Sea off Burma	115
1988, Mar. 17	Colombian Boeing 707	Crashed into mountainside near Venezuela border	143
1988, July 3	Iran Air Airbus A300	Misidentified as hostile aircraft, shot down by U.S. Navy warship <i>Vincennes</i> over Persian Gulf	290
1988, Oct. 19	Indian Airlines Boeing 737	Exploded after striking trees near runway, Ahmedabad, India	131
1988, Dec. 21	Pan Am (U.S.) Boeing 747	Bomb set by Libyan agent; exploded over Lockerbie, Scotland	270⁹
1989, Feb. 8	U.S.-chartered Boeing 707	Crashed into mountain on Azores Isls., off Portugal	144
1989, June 7	Surinam Airways DC-8	Crashed near Paramaribo Airport, Suriname	176
1989, July 19	United Airlines DC-10	Defect in plane forced emergency landing in Sioux City, IA	111
1989, Sept. 3	Cubana Aviacion Ilyushin 62M	Crashed on takeoff from Havana, Cuba	171*
1989, Sept. 19	UTA (France) DC-10	Bomb set by Libyan agents exploded on board flight from Congo (Brazzaville) to France while over desert in Niger	170
1989, Oct. 21	TAN-SAHSA (Honduras) Boeing 727	Crashed into mountain near Tegucigalpa, Honduras	131
1989, Nov. 27	Avianca (Colombia) Boeing 727	Bomb exploded on flight from Bogotá,	107

		Colombia	
1990, Jan. 25	Avianca (Colombia) Boeing 707	Crashed on landing at JFK Airport, New York, NY	73
1990, Oct. 2	Xiamen Airlines Boeing 737, China Southern Boeing 757	Hijacked after takeoff fr. Xiamen; collided with China Southern aircraft on runway during emergency landing, Guangzhou, China	128
1991, May 26	Lauda Air (Austria) Boeing 767-300	Broke up following takeoff from Bangkok, Thailand	223
1991, July 11	Nigeria Airways DC-8	Crashed on landing at Jidda, Saudi Arabia	261
1991, Oct. 5	U.S. Air Force Lockheed C-130 Hercules	Crashed after takeoff from Jakarta, Indonesia	135*
1992, July 31	Thai Airbus A300-310	Crashed into mountain N of Kathmandu, Nepal	113
1992, Sept. 26	Nigerian Air Force LC- 130 Hercules	Transport full of military officers crashed near Lagos, Nigeria	158
1992, Sept. 28	Pakistan Intl. Air Airbus A300	Crashed into hillside near Kathmandu, Nepal	167
1992, Oct. 4	El Al (Israel) Boeing 747-200F	Crashed into 2 apartment bldgs., Amsterdam, Netherlands	120*
1992, Nov. 24	China Southern Airlines Boeing 737	Crashed on approach to Guilin, China	141
1992, Dec. 22	Libyan Arab Air Boeing 727	Collided with Libyan Air Force MiG-23 on approach to Tripoli	159
1993, Feb. 8	Iran Air Tu-154, Iranian Air Force jet	Collided after military jet took off from Tehran, Iran	131
1993, May 19	SAM Colombia Boeing 727	Crashed into mountain near Medellín, Colombia	132
1993, Nov. 20	Macedonian Yakovlev 42D	Crashed into mountain near Skopje, Macedonia	116
1994, Jan. 3	Aeroflot Tu-154	Crashed and exploded after takeoff from Irkutsk, Russia	125*
1994, Apr. 26	China Airlines Airbus A300	Crashed on approach to Nagoya Airport, Japan	264

1994, June 6	China Northwest Airlines Tu-154	Crashed near Xian, China	160
1994, Sept. 8	USAir Boeing 737-300	Crashed near Pittsburgh Intl. Airport, Aliquippa, PA	132
1994, Oct. 31	American Eagle ATR-72-210	Crashed in field near Roselawn, IN	68
1995, Dec. 18	Zairean Lockheed L-188C Electra	Overloaded charter crashed in Lunda Norte, Angola	141
1995, Dec. 20	American Airlines Boeing 757	Crashed into mountain N of Cali, Colombia	159
1996, Jan. 8	African Air Antonov-32 cargo plane	Crashed into a market in Kinshasa, Zaire; all deaths on ground	237*
1996, Feb. 6	Alas Nacionales (Dom. Rep.) Boeing 757	Crashed into Atlantic off Dominican Republic	189
1996, Feb. 29	Faucett (Peru) Boeing 737	Crashed into hillside near Arequipa, Peru	123
1996, Apr. 3	U.S. Air Force Boeing T-43A	Crashed into mountain near Dubrovnik, Croatia	35 ¹⁰
1996, May 11	ValuJet DC-9	Crashed into Florida Everglades after improper cargo started fire	110
1996, July 17	Trans World Airlines Boeing 747	Exploded and crashed into Atlantic off Long Island, NY	230

2018, Sept. 20—MV Nyerere	Overloaded Tanzanian ferry capsized in Lake Victoria	227+
2019, Sept. 2— Conception	Dive boat caught fire nr. Santa Cruz Isl., CA, while passengers slept	34

Note: Deaths of migrants and refugees trying to cross the Mediterranean Sea began to spike in 2014. The UN's Intl. Organization for Migration reported the following figures for dead and missing in the Mediterranean: 3,538 (2014), 3,771 (2015), 5,096 (2016), 3,139 (2017), 2,277 (2018), 1,510 (2019), 1,881 (2020), 3,231 (2021), and 1,209 (2022, as of Sept. 25, 2022).

Some Notable Railroad Disasters Since 1925

Date	Location	Deaths
1925, June 16	Hackettstown, NJ	50
1933, Dec. 23	Lagny-Pomponne, France	230
1937, July 16	Near Patna, India	107
1938, Dec. 25	Near Kishinev, Romania	150
1939, Dec. 22	Genthin, near Magdeburg, Germany	132
1943, Sept. 6	Frankford Junction, Philadelphia, PA	79

1943, Dec. 16	Between Rennert and Buie, NC	72
1944, Jan. 16	León Province, Spain	500
1944, Mar. 2	Salerno, Italy	521
1944, Dec. 31	Bagley, UT	50
1945, July 16	Munich, Germany	102
1946, Mar. 20	Aracaju, Brazil	185
1949, Oct. 22	Near Nowy Dwór, Poland	200+
1950, Nov. 22	Richmond Hill, Queens, NY	79
1951, Feb. 6	Woodbridge, NJ	84
1952, Mar. 4	Near Rio de Janeiro, Brazil	119
1952, July 9	Rzepin, Poland	160
1952, Oct. 8	Harrow, England, UK	112
1953, Dec. 24	Tangiwai, New Zealand	151
1953, Dec. 24	Sakvice, Czechoslovakia	103
1955, Apr. 3	Guadalajara, Mexico	300
1957, Sept. 1	Kendal, Jamaica	178
1957, Sept. 29	Montgomery, W Pakistan	300
1957, Dec. 4	London, England, UK	90
1958, May 8	Rio de Janeiro, Brazil	128
1960, Nov. 14	Pardubice, Czechoslovakia	117
1962, May 3	Tokyo, Japan	163
1963, Nov. 9	Yokohama, Japan	162
1965, Feb. 27	Near Port Sudan, Sudan	124
1970, Feb. 1	Buenos Aires, Argentina	236
1972, June 16	Near Soissons, France	108
1972, Oct. 6	Near Saltillo, Mexico	204
1974, Aug. 30	Zagreb, Yugoslavia	153
1981, June 6	Near Mansi, India	268
1982, Jan. 27	El Asnam, Algeria	120
1982, July 11	Tepic, Mexico	120
1983, Feb. 19	Empalme, Mexico	100
1985, Jan. 13	Awash, Ethiopia	392
1985, Sept. 12	Viseu, Portugal	118
1986, Aug. 6	Bihar, India	202
1987, July 2	Kasumbalesha Shaba, Zaire	125
1987, Aug. 7	Between Moscow and Rostov, USSR	106

1987, Oct. 19	Jakarta, Indonesia	153
1988, June 4	Arzamas, USSR	100
1988, July 8	Kerala, India	108
1989, Jan. 15	Maizdi Khan, Bangladesh	135
1989, June 4	Ufa, USSR	645
1989, Aug. 11	San Rafael R., Sinaloa State, Mexico	112
1990, Jan. 4	Sindh Province, Pakistan	307
1991, Mar. 5	Nacala, Mozambique	109
1991, June 8	Ghotki, Pakistan	100
1991, Sept. 5	Pointe-Noire, Congo Republic	110
1993, Jan. 30	Near Mtito Andei, Kenya	140+
1993, Apr. 25	Near Karachi, Pakistan	150
1994, Sept. 22	Lubango, Angola	300
1994, Dec. 30	Near Namkham, Myanmar	102
1995, Jan. 13	Dinajpur, Bangladesh	150
1995, Aug. 20	Firozabad, India	350
1995, Nov. 28	Baku, Azerbaijan	337
1997, Mar. 3	Punjab Province, Pakistan	128
1997, May 4	Kisangani, Zaire	100+
1998, Feb. 19	Yaounde, Cameroon	120
1998, June 3	Eschede, Germany	102
1998, Nov. 26	Khanna, India	108
1999, Aug. 2	Gauhati, India	285
2002, Feb. 20	S of Cairo, Egypt	377
2002, May 25	Muamba, Mozambique	195
2002, June 24	Igandu, Tanzania	281
2002, Sept. 10	Bihar, India	112
2004, Feb. 18	Neyshabur, NE Iran	300
2004, Apr. 22	Ryongchon, North Korea	161
2005, Apr. 25	Near Amagasaki, Japan	107
2005, July 13	Ghotki, Pakistan	132
2005, Oct. 29	Andra Pradesh, India	110
2007, Aug. 2	Nr. Benaleka, Dem. Rep. of Congo	100
2010, May 28	W. Bengal, India	148
2011, July 23	Wenzhou, China	140
2016, Nov. 20	Near Kanpur, Uttar Pradesh, India	150

2019, Oct. 31

Notable Droughts

Source: EM-DAT: The Emergency Events Database, CRED/D. Guha-Sapir, Université catholique de Louvain, Brussels, Belgium, www.emdat.be; World Almanac research

Date	Location	Est. deaths
1900	Bengal, India	1,250,000
1900	Cape Verde islands	11,000
1910-14	Zinder Dept., Niger	85,000
1920	China	500,000
1920	Cape Verde islands	24,000
1921	S Ukraine, Volga, USSR	1,200,000
1928-30	Shaanxi, Henan, Gansu, China	3,000,000
1940-44	Cape Verde islands	20,000
1942	Calcutta, Bengal, India	1,500,000
1943	Bangladesh	1,900,000
1946	Cape Verde islands	30,000
1965	Ethiopia	2,000
1965-67	India	1,500,000
1966	Lombok, Indonesia	8,000
1973-78	Ethiopia	100,000
1974-76	Somalia	19,000
1981-85	Mozambique	100,000
1981-85	Chad	3,000
1983	Swaziland	500
1983-84	Eritrea, Ethiopia	300,000
1983-85	N Sudan	150,000
1987	Somalia, Eritrea, Ethiopia	967
1987	NW India	300
1988	Central China	1,400
1991	Jiangxi, Hunan Provinces, China	2,000
1997	Irian Jaya, Indonesia	672
1999-2003	Pakistan	143
2002	Malawi	500

2006	SW China	134
2014-17	Tharparkar, Pakistan	166

Some Notable Miscellaneous Disasters Since 1950

Date	Event	Location	Details	Est. deaths
1952, Dec.	Pollution	London, England, UK	Heavy smog blanketed city; impeded breathing	4,000
1959-61	Famine	China	Govt. policies compounded by flooding and drought	15-40 mil
1980, summer	Extreme heat	Central, eastern U.S.	Combined direct and indirect deaths est. at 10,000	1,260
1984, Dec. 3	Industrial accident	Bhopal, India	Toxic gas leaked from a Union Carbide factory	16,000
1986, Aug. 21	Gas	Nr. Lake Nyos, Cameroon	Volcanic lake released cloud of carbon dioxide gas	1,700
1990, July 2	Stampede	Mecca, Saudi Arabia	Pilgrims panicked in tunnel leading to the holy city	1,426
1995, June 29	Building collapse	Seoul, South Korea	Improperly built and maintained Sampoong Dept. Store failed with shoppers inside	501
2003, summer	Extreme heat	Europe	France suffered most, with 14,800 dead	35,000
2005, Aug. 31	Stampede	Baghdad, Iraq	Rumors of suicide bomber caused panic among religious pilgrims on al-Aimmah Bridge	965
2013, Apr. 24	Building collapse	Savar, Bangladesh	Garment factory found to have substandard foundation	1,100+
2015, Sept. 24	Stampede	Mina, Saudi Arabia	Two groups of pilgrims collided during hajj to Mecca	2,411
2019,	Extreme	France	Record temperatures	868

July 21-27	heat		across Europe	
2021, June 25- July 1	Extreme heat	British Columbia, Canada	Heat dome caused record temperatures	619

Some Notable U.S. Tornadoes Since 1925

Date	Location	Deaths
1925, Mar. 18	MO, IL, IN	747
1927, Apr. 12	Rocksprings, TX	74
1927, May 9	AR; Poplar Bluff, MO	92
1927, Sept. 29	St. Louis, MO	90
1930, May 6	Hill, Navarro, Ellis Cos., TX	41
1932, Mar. 21	Alabama	268
1936, Apr. 5-6	Tupelo, MS; Gainesville, GA	454
1938, Sept. 29	Charleston, SC	32
1942, Mar. 16	Central to NE Mississippi	75
1942, Apr. 27	Rogers and Mayes Cos., OK	52
1944, June 23	OH, PA, WV, MD	150
1945, Apr. 12	OK, AR	102
1947, Apr. 9	TX; Woodward, OK; KS	181
1948, Mar. 19	Bunker Hill and Gillespie, IL	33
1949, Jan. 3	LA, AR	58
1952, Mar. 21-22	AR, MO, TN	208
1953, May 11	Waco, TX	114
1953, June 8	Flint-Beecher, MI; OH	142
1953, June 9	Worcester and vicinity, MA	90
1953, Dec. 5	Vicksburg, MS	38
1955, May 25	Udall, KS; MO; Blackwell, OK; TX	115
1957, May 20	KS, MO	48
1958, June 4	NW Wisconsin	30
1959, Feb. 10	St. Louis, MO	21
1960, May 5-6	Southeastern OK, AR	30
1965, Apr. 11	IA, IN, IL, OH, MI, WI	271
1966, Mar. 3	Jackson, MS; AL	57
1967, Apr. 21	IL, MO, IA, MI	33
1968, May 15	Midwest	71

1969, Jan. 23	Mississippi	32
1970, May 11	Lubbock, TX	23
1971, Feb. 21	Mississippi Delta: MS, LA, AR, TN	110
1973, May 26-27	South, Midwest	47
1974, Apr. 3-4	AL; GA; KY; Xenia, OH; other states	315
1977, Apr. 4	AL, MS, GA	22
1979, Apr. 10	TX, OK	60
1984, Mar. 28	NC, SC	57
1985, May 31	NY; PA; OH; Ontario, Can.	75
1987, May 22	Saragosa, TX	30
1989, Nov. 15	Huntsville, AL	18
1990, Aug. 28	Northern IL	25
1991, Apr. 26	KS, OK	23
1992, Nov. 21-23	South, Midwest	26
1994, Mar. 27-28	AL, TN, GA, NC, SC	52
1995, May 6-7	Southern OK, northern TX	23
1997, Mar. 1	Central AR	26
1997, May 27	Jarrell, TX	27
1998, Feb. 22-23	Central FL	42
1998, Apr. 8	AL, GA, MS	39
1999, May 3	OK, KS	54
2000, Feb. 14	SW Georgia	22+
2002, Nov. 10-11	AL, MS, TN, IN, OH, PA	36
2003, May 4-11	TN, MO, KS, IL, OK, WV, AL	48
2005, Nov. 6	KY, IN	22
2007, Mar. 1	AL, GA, MO, Midwest	20
2008, Feb. 25	TN, AR, KY, AL, MO	57
2008, May 10	MS, OK, GA	23
2011, Apr. 14-16	Southeast, Midwest, OK to VA	38
2011, Apr. 25-28	362 funnels from TX to NY	321
2011, May 22	Joplin, MO	161
2012, Mar. 2-3	Southeast, Ohio Valley (AL, GA, IN, KY, OH, TN)	42
2013, May 20	Moore, OK	24
2013, May 31	El Reno, OK	21
2017, Jan. 20-22	AL, FL, GA, LA, MS, SC, TX	20
2021, Dec. 10-11	AR; Edwardsville, IL; Mayfield, KY; MO; TN	90+

Some Notable Hurricanes, Typhoons, Blizzards, Other Storms

C. = cyclone; H. = hurricane; TS. = tropical storm; T. = typhoon¹.

Date	Location	Est. deaths
1881, Aug. 24-29	H., GA, SC	700
1888, Mar. 11-14	Blizzard, Eastern U.S.	400
1893, Aug. 15-Sept. 2	H., GA, SC	1,000+
1893, Oct. 1	H., LA	1,100+
1900, Sept. 8	H., Galveston, TX	8,000+
1906, Sept. 18	T., Hong Kong	10,000+
1906, Sept. 19-24	H., LA, MS	350
1909, Sept. 20	H., LA	350+
1915, Aug. 16	H., Galveston, TX	275
1915, Sept. 29	H., LA	275
1919, Sept. 6-14	H., Carib., FL Keys, Gulf, TX	600+ ²
1922, July 27	T., Swatow, China	100,000
1926, Sept. 11-22	H., FL, AL, MS	370+
1926, Oct. 20	H., Cuba	600
1928, Sept. 6-20	H., southern FL	2,500+
1930, Sept. 3	H., Dominican Republic	2,000
1935, Aug. 29-Sept. 10	H., Caribbean, SE U.S.	400+
1937, Sept. 2	T., Hong Kong	10,000+
1938, Sept. 21	H., NY, New England	682
1940, Nov. 11-12	NE, Midwest U.S.	154
1942, Oct.	T., W. Sundarbans, Bangladesh	61,000
1942, Oct. 15-16	H., Bengal, India	40,000
1947, Dec. 26	Blizzard, NYC, N Atl. states	55
1952, Oct. 22	T., Philippines	440
1954, Aug. 30	H. Carol, NE U.S.	68
1954, Oct. 5-18	H. Hazel, E Canada, U.S., Haiti	347
1955, Aug. 7-21	H. Diane, Eastern U.S.	400
1955, Sept. 19	H. Hilda, Mexico	200
1956, Feb. 1-29	Blizzard, W Europe	1,000
1957, June 25-30	H. Audrey, TX to AL	390

1958, Feb. 15-16	Blizzard, NE U.S.	171
1959, Sept. 17-19	T. Sarah, Japan, S. Korea	2,000
1959, Sept. 26-27	T. Vera, Honshu, Japan	4,466
1960, Sept. 4-12	H. Donna, Caribbean, E U.S.	148
1961, Oct. 31	H. Hattie, Brit. Honduras	400
1962, Sept. 1	T. Wanda, Hong Kong	130-200
1963, May 28-29	Windstorm, Bangladesh	22,000
1963, Oct. 4-8	H. Flora, Caribbean	6,000
1964, June 30	T. Winnie, N Philippines	107
1964, Sept. 5	T. Ruby, Hong Kong, China	735
1965, May 11-12	Windstorm, Bangladesh	17,000
1965, June 1-2	Windstorm, Bangladesh	30,000
1965, Sept. 7-12	H. Betsy, FL, MS, LA	74
1965, Dec. 15	Windstorm, Bangladesh	10,000
1966, June 4-10	H. Alma, Honduras, SE U.S.	51
1966, Sept. 24-30	H. Inez, Carib., FL, Mexico	293
1967, July 9	T. Billie, SW Japan	347
1967, Sept. 5-23	H. Beulah, Carib., Mex., TX	54
1967, Dec. 12-20	Blizzard, SW U.S.	51
1969, Aug. 17-18	H. Camille, MS, LA	256
1970, Sept. 15	T. Pitang (Georgia), Philippines	300
1970, Oct. 14	T. Sening (Joan), Philippines	583
1970, Oct. 15	T. Titang (Kate), Philippines	526
1970, Nov. 13	C., Bay of Bengal, Bangladesh	300,000-500,000
1971, Aug. 1	T. Rose, Hong Kong	130
1972, June 19-29	H. Agnes, FL to NY	118
1972, Dec. 3	T. Theresa, Philippines	169
1973, June-Aug.	Monsoon rains, India	1,217
1974, July 11	T. Gilda, Japan, S. Korea	108
1974, Sept. 19-20	H. Fifi, Honduras	2,000
1975, Sept. 13-27	H. Eloise, Caribbean, NE U.S.	71
1976, May 20	T. Olga, floods, Philippines	215
1976, Sept. 25-Oct. 2	H. Liza, western Mexico	630
1978, Oct. 27	T. Rita, Philippines	400
1979, Aug. 30-Sept. 7	H. David, Caribbean, E U.S.	1,100

1980, Aug. 4-11	H. Allen, Caribbean, TX	272
1981, Nov. 25	T. Irma, Luzon Isl., Philippines	176
1983, June	Monsoon, India	900
1984, Sept. 2	T. Ike, southern Philippines	1,363
1985, May 25	C., Bangladesh	15,000
1985, Oct. 26-Nov. 6	H. Juan, SE U.S.	97
1987, Nov. 25	T. Nina, Philippines	650
1988, Sept. 10-17	H. Gilbert, Carib., Gulf of Mex.	260
1989, Sept. 16-22	H. Hugo, Caribbean, SE U.S.	86
1990, May 6-11	C. (mult.), SE India	450
1991, Apr. 30	C., Bangladesh	139,000
1991, Nov. 5	TS. Thelma, central Philippines	7,000+
1992, Aug. 24-26	H. Andrew, Southern FL, LA	65
1993, Mar. 12-14	Blizzard, Eastern U.S.	270+
1993, June	Monsoon, Bangladesh	2,000
1994, Nov. 8-18	TS. Gordon, Caribbean, FL	830
1995, Oct. 2-4	H. Opal, S Mexico, FL, AL	59
1995, Nov. 2-3	T. Angela, Philippines	600+
1996, Jan. 7-8	Blizzard, NE U.S.	100
1996, Aug. 22	Blizzard, Himalayas, N India	239
1996, Aug. 29-Sept. 6	H. Fran, Carib., NC, VA, WV	30
1996, Sept. 9	T. Sally, S China	114
1996, Nov. 6	C., Andhra Pradesh, India	1,000+
1996, Dec. 25	TS. Greg, eastern Malaysia	100+
1997, May 19	C., Bangladesh	108
1997, Aug. 18-21	T. Winnie, Taiwan, E China	140+
1997, Oct. 8-10	H. Pauline, SW Mexico	230
1998, June 9	C., Gujarat, India	1,320
1998, Aug.	Monsoon, Bangladesh	326
1998, Sept. 21-23	H. Georges, Carib., FL, U.S. Gulf	600+
1998, Oct. 27-29	H. Mitch, Central America	11,000+
1999, Sept. 4-17	H. Floyd, The Bahamas, E U.S.	56
1999, Oct. 29	C., E India	9,392
1999, Dec. 26-29	Gales, France, Switz., Germany	120
2000, Dec. 27	Winter storm, TX, OK, AR	40+
2001, July 30	T. Toraji, Taiwan	200

2001, Nov. 6-12	T. Lingling, S Philip., Vietnam	220+
2002, Aug.-Sept.	T. Rusa, N. and S. Korea	115+
2003, Feb. 16-17	Blizzard, E seaboard U.S.	59

------------------	-------	--------	-----

NA = Not available. (1) Once thought to have been a volcanic eruption; evidence indicates a destructive earthquake and tsunami occurred on this date. (2) This earthquake caused the most deadly tsunami to date in the Atlantic Ocean. (3) Incl. deaths from resulting fires; revised estimates of magnitude range from 7.7 to 7.9. (4) Commonly referred to as the Gansu quake; actually located within the Ningxia autonomous region. (5) The largest recorded earthquake; caused a deadly tsunami that spread across the Pacific Ocean as far as Japan. (6) The "Good Friday" earthquake sent a tsunami that hit British Columbia, Canada, and the U.S. Pacific coast. (7) This undersea earthquake triggered devastating Indian Ocean tsunamis. (8) Official govt. death toll announced Jan. 2011. Estimates from other groups vary widely. (9) The most powerful earthquake in Japan's history set off a tsunami that inundated much of the coast and caused a partial meltdown of the Fukushima nuclear power plant.

Some Notable Fires Since 1940

2016, Dec. 2	“Ghost Ship” warehouse, Oakland, CA	36
2017, June 14	Grenfell Tower apts., London, Eng., UK	72
2017, June 17-18	Forest fires, central Portugal	64
2018, July 23	Wildfires, Attica region, Greece	99
2018, Nov. 8-25	Camp Fire wildfire, Butte Co., CA	85
2019, Oct.-2020, Feb.	“Black Summer” wildfires, Australia	33 ¹

(1) Research published in Mar. 2020 found an additional 417 excess deaths from smoke inhalation.

U.S. Fires, 2021

Source: National Fire Protection Association

- Public fire departments responded to an estimated 1.35 mil fires in 2021, including 486,500 structure fires (338,000 in homes), 208,500 vehicle fires, and 658,500 fires outside or other fires.
- An estimated 3,800 civilians died in fires in 2021.
- There were an estimated 14,700 civilian fire injuries reported, 11,100 of them in home structure fires.
- Direct property damage from fires amounted to an estimated \$15.9 bil. Structure fires accounted for \$12.7 bil of property damage, and property loss associated with home fires came to \$8.7 bil.

Some Notable Explosions Since 1920

See also Principal U.S. Mine Disasters Since 1867. Some bombings related to political conflicts and terrorism are not included.

Date	Location	Deaths
1920, Sept. 16	Wall Street, New York, NY	39
1921, Sept. 21	Chem. storage facility, Oppau, Ger.	561
1924, Jan. 3	Food plant, Pekin, IL	42
1927, May 18	School bombing, Bath, MI	45
1928, Apr. 13	Dance hall, West Plains, MO	40
1937, Mar. 18	School, New London, TX	311
1940, Sept. 12	Hercules Powder factory, Kenvil, NJ	55
1942, Apr. 26	Honkeiko (Benxihu) colliery, China	1,549
1942, June 5	Ordnance plant, Elwood, IL	49
1944, Apr. 14	SS <i>Fort Stikine</i> , Bombay docks, India	700
1944, July 17	Munitions ships, depot, Port Chicago, CA	322
1944, Oct. 20	Liquid natural gas tanks, Cleveland, OH	130
1947, Apr. 16	Freighter, chemical co. plant, Texas City, TX	576
1948, July 28	Farben works, Ludwigshafen, Ger.	184
1950, May 19	Munitions barges, S. Amboy, NJ	30
1954, May 26	USS <i>Bennington</i> , off RI	103
1956, Aug. 7	Dynamite trucks, Cali, Colombia	1,100
1958, Apr. 18	Sunken munitions ship, Okinawa, Japan	40
1959, Apr. 10	WWII bomb, Philippines	38
1959, June 28	Rail tank cars, Meldrim, GA	25
1959, Aug. 7	Truck with explosives, Roseburg, OR	14
1959, Nov. 2	Explosives, Jamuri Bazar, India	46
1959, Dec. 13	2 apt. bldgs., Dortmund, Germany	26
1960, Mar. 4	Belgian munitions ship, Havana, Cuba	100
1962, Oct. 3	New York Telephone Co. office, New York, NY	23
1963, Jan. 2	Packing plant, Terre Haute, IN	17
1963, Mar. 9	Dynamite plant, S. Africa	45
1963, Aug. 13	Explosives dump, Gauhaiti, India	32
1963, Oct. 31	State Fair Coliseum, Indianapolis, IN	73
1963, Nov. 9	Mitsui Miike coal mine, Japan	458

1964, July 23	Harbor munitions, Bone, Algeria	100
1965, Aug. 9	Missile silo, Searcy, AR	53
1965, Oct. 21	Bridge, Tila Bund, Pakistan	80
1965, Nov. 24	Armory, Keokuk, IA	20
1968, Apr. 6	Sports store, Richmond, IN	43
1969, Mar. 31	Coal mine, nr. Barroteran, Mexico	180
1970, Apr. 8	Subway construction, Osaka, Japan	73
1971, June 24	Tunnel under construction, Sylmar, CA	17
1973, Feb. 10	Liquid gas tank, Staten Island, NY	40
1975, Dec. 27	Coal mine, Chasnala, India	431
1976, Apr. 13	Munitions works, Lapua, Finland	40
1977, Nov. 11	Freight train, Iri, S. Korea	57
1977, Dec. 22	Grain elevator, Westwego, LA	35
1978, July 11	Propylene tank truck, Tarragona, Spain	150
1980, Oct. 23	School, Ortuella, Spain	64
1982, Apr. 25	Antiques exhibition, Todi, Italy	33
1982, Nov. 2	Salang Tunnel, Afghanistan	1,000+
1984, Feb. 25	Oil pipeline, Cubatao, Brazil	508
1984, June 21	Naval supply depot, Severomorsk, USSR	200+
1984, Nov. 19	Gas storage area, NE Mexico City	334
1984, Dec. 3	Chemical plant, Bhopal, India	3,849
1984, Dec. 5	Coal mine, Taipei, Taiwan	94
1985, June 25	Fireworks factory, Hallett, OK	21
1988, Apr. 10	Army ammunitions dump nr. Rawalpindi and Islamabad, Pakistan	100
1988, July 6	Oil rig, North Sea off NE Scotland, UK	167
1989, June 3	Gas pipeline, between Ufa, Asha, USSR	650+
1992, Mar. 3	Coal mine, Kozlu, Turkey	270+
1992, Apr. 22	Gas leak in sewers, Guadalajara, Mexico	200+
1992, May 9	Coal mine, Plymouth, Nova Scotia, Can.	26
1993, Feb. 26	World Trade Center, New York, NY	6
1994, July 18	Jewish community center, Buenos Aires, Argentina	100
1995, Apr. 19	Fed. office building, Oklahoma City, OK	168
1995, Apr. 29	Subway construction, S. Korea	110
1996, Jan. 31	Bank, Colombo, Sri Lanka	53
1996, Mar. 3-4	Jerusalem and Tel Aviv, Israel	33

1996, June 25	U.S. military housing complex, nr. Dhahran, Saudi Arabia	19
1996, July 24	Train, Colombo, Sri Lanka	86
1996, Nov. 16	Military apt., Dagestan region, Russia	68
1996, Nov. 21	Propane gas leak in bldg., San Juan, PR	33
1996, Nov. 27	Coal mine, Shanxi Prov., China	91+
1996, Dec. 30	Train, Assam, India	59+
1997, Dec. 2	Coal mine, Novokuznetsk, Russia	68
1998, Feb. 14	2 oil tankers, Yaounde, Cameroon	120
1998, Feb. 14	17 bombs, Coimbatore, India	50
1998, Apr. 4	Coal mine, Donetsk, Ukraine	63
1998, Aug. 7	Bomb, U.S. emb., Nairobi, Kenya	213
1998, Aug. 7	Bomb, U.S. emb., Dar-es-Salaam, Tanzania	11
1998, Sept. 8	2 buses, São Paulo, Brazil	59
1998, Oct. 17	Oil pipeline, Jesse, Nigeria	700+
1999, May 16	Fuel truck, Punjab Prov., Pakistan	75
1999, Sept. 9	Apartment building, Moscow, Russia	94
1999, Sept. 13	Apartment building, Moscow, Russia	118
1999, Sept. 16	Apartment building, Moscow, Russia	18
1999, Sept. 26	Fireworks factory, Celaya, Mexico	56
2000, Feb. 25	Bombs on 2 buses, Ozamis, Philippines	41
2000, Mar. 11	Coal mine, Krasnodon, Ukraine	80
2000, Apr. 16	Airport hangar, Dem. Rep. of Congo	100+
2000, Aug. 12	Flaw in torpedo, <i>Kursk</i> submarine, off Russia	118
2000, Sept. 9	Truck explosion, Urumqi, China	60
2000, Oct. 12	USS <i>Cole</i> , Yemen	17
2001, Mar. 6	School, Jianxi Prov., China	41
2001, Apr. 21	Coal mine, Shaanxi, China	51
2001, June 1	Dance club, Tel Aviv, Israel	21
2001, July 17	Coal mine, Guanxi, China	76+
2001, Aug. 19	Coal mine, Donetsk region, Ukraine	52
2001, Sept. 21	Chem. plant, Toulouse, France	29
2002, Jan. 21	Volcanic lava caused gas station blast, Goma, Dem. Rep. of Congo	50+
2002, Jan. 27	Munitions dump, Lagos, Nigeria	1,000+
2002, May 9	Land mine at parade, Kaspiisk, Russia	34+

2002, June 14	Car bomb outside U.S. consulate, Karachi, Pakistan	12
2002, June 18	Bomb on bus, Jerusalem, Israel	20
2002, July 5	Bomb in market, Larba, Algeria	35+

Note: The world's worst mine disaster killed 1,549 workers in Manchuria, China, Apr. 26, 1942. (1) Copper mine. (2) Silver mine.

Notable Nuclear Accidents

Sept. 29, 1957: After cooling system failure, nuclear waste at Chelyabinsk-65 in Kyshtym, Russia, exploded. Residents were evacuated but not informed until 1989 about their exposure to radiation.

Oct. 7, 1957: Fire in the Windscale plutonium production reactor N of Liverpool, England, UK, released radioactive material; later blamed for 39 cancer deaths.

Jan. 3, 1961: Reactor explosion at a federal installation near Idaho Falls, ID, killed 3 workers. Radiation contained.

Oct. 5, 1966: Sodium cooling system malfunction caused a partial core meltdown at the Enrico Fermi demonstration breeder reactor, near Detroit, MI. Radiation contained.

Jan. 21, 1969: Coolant malfunction from an experimental underground reactor at Lucens Vad, Switzerland, released radiation into a cavern, which was then sealed.

Mar. 22, 1975: Fire at the Brown's Ferry reactor in Decatur, AL, caused dangerous lowering of cooling water levels.

Mar. 28, 1979: Worst commercial nuclear accident in the U.S. occurred as equipment failures and human mistakes led to a loss of coolant and a partial core meltdown at the Three Mile Island reactor in Middletown, PA.

Feb. 11, 1981: Eight workers were contaminated when 100,000 gallons of radioactive coolant leaked into the containment building of TVA's Sequoyah 1 plant near Chattanooga, TN.

Apr. 25, 1981: Some 100 workers were exposed to radiation during repairs of a nuclear plant at Tsuruga, Japan.

Jan. 6, 1986: Cylinder of nuclear material burst after being improperly heated at a Kerr-McGee plant in Gore, OK. One

worker died; 100 were hospitalized.

Apr. 26, 1986: Fires and resulting explosions at the Chernobyl nuclear power plant near Kiev, USSR (now in Ukraine), left at least 31 dead in the immediate aftermath and spread radioactive material over much of Europe. An estimated 135,000 people were evacuated. Tens of thousands of excess cancer deaths (as well as increased birth defects) were expected.

Sept. 1987: Cesium chloride from an improperly discarded hospital irradiation machine contaminated more than 200 people and killed at least 4 in Goiânia, Brazil.

Mar. 11, 2011: A 9.0 magnitude earthquake caused a tsunami that inundated the Fukushima Daiichi nuclear power plant on Japan's NE coast. Three of the plant's reactors suffered partial meltdowns; more than 12,000 tons of radioactive water was released into the sea.

Record Oil Spills

The exact number of barrels in a ton varies with the type of oil, but a general approximation is 7 barrels per ton. By custom, 42 gallons constitute a barrel of crude oil.

Name, location	Date	Cause	Est. tons
BP <i>Deepwater Horizon</i> rig, Gulf of Mexico, U.S.	Apr. 20-July 15, 2010	Explosion	700,000 ¹
Ixtoc I oil well, S Gulf of Mexico	June 3, 1979	Blowout	600,000
Nowruz oil field, Persian Gulf	Feb. 1983	Blowout	600,000
<i>Atlantic Empress</i> , off Trinidad and Tobago	July 19, 1979	Collision with <i>Aegean Captain</i>	276,000
<i>ABT Summer</i> , off Angola	May 28, 1991	Explosion	260,000
<i>Amoco Cadiz</i> , near Portsall, France	Mar. 16, 1978	Grounding	223,000
<i>Castillo de Bellver</i> , off Cape Town, South Africa	Aug. 6, 1983	Fire	150,000-160,000
<i>Haven</i> , off Genoa, Italy	Apr. 11, 1991	Explosion	144,000

<i>Odyssey</i> , off Nova Scotia, Canada	Nov. 10, 1988	Broke apart in storm	132,000
<i>Torrey Canyon</i> , off Land's End, England, UK	Mar. 18, 1967	Grounding	119,000
<i>Sea Star</i> , Gulf of Oman	Dec. 19, 1972	Collision	115,000
<i>Sanchi</i> , off Shanghai, China	Jan. 6, 2018	Collision with <i>CF Crystal</i>	113,000
<i>Urquiola</i> , La Coruna, Spain	May 12, 1976	Grounding	100,000

(1) The Dept. of Energy estimated the spill at 4.9 mil barrels, or more than 200 mil gallons.

Other Notable Oil Spills

Name, location	Date	Cause	Gallons
Persian Gulf	Jan. 21, 1991	Intentional spillage by Iraq	130,000,000 ¹
<i>Braer</i> , off Shetland Islands, UK	Jan. 5, 1993	Grounding	26,000,000
Taylor Energy platform, Gulf of Mexico, U.S.	Sept. 2004-present	Broke apart in storm	Up to 25,000,000
<i>Prestige</i> , off N Spain	Nov. 13-19, 2002	Ship broke in half	22,600,000
<i>Aegean Sea</i> , off N Spain	Dec. 3, 1992	Grounding	21,500,000
<i>Sea Empress</i> , off SW Wales, UK	Feb. 15, 1996	Grounding	18,000,000
Newtown Creek, Greenpoint, Brooklyn, NY	Oct. 5, 1950-present	Industrial explosion	17,000,000 ²
<i>Hawaiian Patriot</i> , off Hawaii in Pacific	Feb. 23-24, 1977	Hull cracked; ship exploded	14,700,000
<i>World Glory</i> , off South Africa	June 13, 1968	Hull failure	13,524,000
<i>Exxon Valdez</i> , Prince William Sound, AK	Mar. 24, 1989	Grounding	10,080,000
Ashland Oil facility, Floreffe, PA; Monongahela R.	Jan. 2, 1988	Storage tank collapse	3,850,000

(1) Est. by Saudi Arabia. Some estimates as low as 25 mil gal. (2) Legacy of refinery operations since mid-1800s and leaking storage tanks. Spill estimated at up to 30 mil gal.

AEROSPACE

Notable Human Spaceflight Missions

Source: National Aeronautics and Space Administration (NASA); Congressional Research Service; World Almanac research

The spaceflights listed are a selection of notable crewed U.S. missions by NASA, unless otherwise noted, plus crewed non-U.S. missions (shown with an asterisk). The non-U.S. missions were sponsored by the USSR—later, the Commonwealth of Independent States (CIS) and, from 1997, Russia—or by China. Launch dates are Eastern Standard Time. **EVA** = extravehicular activity. **ASTP** = Apollo-Soyuz Test Project. **STS** = Space Transportation System, NASA's name for the overall shuttle program.

For shuttle flights, mission name is in parentheses following name of orbiter. Duration of flight is listed in hours:minutes for 1961-Apr. 1970; days (d.), hours (hr.), and minutes (min.) thereafter. Number of total flights taken by each crew member is given in parentheses when flight listed is not the person's first.

4/12/1961: *Vostok 1; 1:48; Yuri A. Gagarin. **1st human orbital flight.**

5/5/1961: Mercury-Redstone 3; 0:15; Alan B. Shepard Jr. **1st American in space.**

7/21/1961: Mercury-Redstone 4; 0:15; Virgil I. Grissom. Flight successful but spacecraft sank shortly after splashdown; Grissom rescued.

8/6/1961: *Vostok 2; 25:18; Gherman S. Titov. 1st spaceflight of more than 24 hours.

2/20/1962: Mercury-Atlas 6; 4:55; John H. Glenn Jr. **1st American in orbit**; three orbits.

5/24/1962: Mercury-Atlas 7; 4:56; M. Scott Carpenter. Manual retrofire error caused 250-mi landing overshoot.

8/11/1962: *Vostok 3; 94:22; Andrian G. Nikolayev. *Vostok 3* and *4* made 1st group flight.

8/12/1962: *Vostok 4; 70:57; Pavel R. Popovich. On 1st orbit, it came within 3 mi of *Vostok 3*.

10/3/1962: Mercury-Atlas 8; 9:13; Walter M. Schirra Jr. Landed 5 mi from target; six orbits.

5/15/1963: Mercury-Atlas 9; 34:19; L. Gordon Cooper. 1st U.S. evaluation of effects of one day in space on a person; 22 orbits.

6/14/1963: *Vostok 5; 119:06; Valery F. Bykovsky. *Vostok 5* and *6* made 2nd group flight.

6/16/1963: *Vostok 6; 70:50; Valentina V. Tereshkova. **1st woman in space**; passed within 3 mi of *Vostok 5*.

10/12/1964: *Voskhod 1; 24:17; Vladimir M. Komarov, Konstantin P. Feoktistov, Boris B. Yegorov. 1st three-person orbital flight; 1st without space suits.

3/18/1965: *Voskhod 2; 26:02; Pavel I. Belyayev, Aleksei A. Leonov. Leonov made **1st spacewalk** (10 min.).

3/23/1965: Gemini-Titan 3; 4:53; Virgil I. Grissom (2), John W. Young. 1st piloted spacecraft to change its orbital path.

6/3/1965: Gemini-Titan 4; 97:56; James A. McDivitt, Edward H. White II. White was **1st American to “walk in space”** (23 min.).

8/21/1965: Gemini-Titan 5; 190:55; L. Gordon Cooper (2), Charles Conrad Jr. Longest-duration human flight to date.

12/4/1965: Gemini-Titan 7; 330:35; Frank Borman, James A. Lovell Jr. Longest-duration *Gemini* flight.

12/15/1965: Gemini-Titan 6A; 25:51; Walter M. Schirra Jr. (2), Thomas P. Stafford. Completed 1st U.S. space rendezvous, with *Gemini 7*.

3/16/1966: Gemini-Titan 8; 10:41; Neil A. Armstrong, David R. Scott. **1st docking of one space vehicle with another**; mission aborted, control malfunction.

- 6/3/1966: *Gemini-Titan 9A***; 72:21; Thomas P. Stafford (2), Eugene A. Cernan. Performed simulation of lunar module rendezvous.
- 7/18/1966: *Gemini-Titan 10***; 70:47; John W. Young (2), Michael Collins. 1st use of Agena target vehicle's propulsion systems; 1st orbital docking.
- 9/12/1966: *Gemini-Titan 11***; 71:17; Charles Conrad Jr. (2), Richard F. Gordon Jr. 1st tethered flight; highest Earth-orbit altitude (850 mi).
- 11/11/1966: *Gemini-Titan 12***; 94:34; James A. Lovell Jr. (2), Edwin E. "Buzz" Aldrin Jr. Final *Gemini* mission; 5-hr. EVA.
- 1/27/1967: *Apollo 1***; Virgil I. Grissom, Edward H. White II, and Roger B. Chaffee died in a fire on the ground at Cape Canaveral, FL.
- 4/23/1967: **Soyuz 1***; 26:40; Vladimir M. Komarov (2). Crashed on reentry, killing Komarov; **1st space fatality**.
- 10/11/1968: *Apollo-Saturn 7***; 260:09; Walter M. Schirra Jr. (3), Donn F. Eisele, R. Walter Cunningham. **1st piloted flight of *Apollo*** spacecraft command-service module only; live TV footage of crew.
- 12/21/1968: *Apollo-Saturn 8***; 147:00; Frank Borman (2), James A. Lovell Jr. (3), William A. Anders. **1st lunar orbit** and piloted lunar return reentry (command-service module only); views of lunar surface televised to Earth.
- 1/14/1969: **Soyuz 4***; 71:21; Vladimir A. Shatalov. Docked with *Soyuz 5*.
- 1/15/1969: **Soyuz 5***; 72:54; Boris V. Volynov, Aleksei S. Yeliseyev, Yevgeny V. Khrunov. Docked with *Soyuz 4*; Yeliseyev and Khrunov transferred to *Soyuz 4* via a spacewalk.
- 3/3/1969: *Apollo-Saturn 9***; 241:00; James A. McDivitt (2), David R. Scott (2), Russell L. Schweickart. 1st piloted flight of lunar module.

- 5/18/1969: Apollo-Saturn 10**; 192:03; Thomas P. Stafford (3), John W. Young (3), Eugene A. Cernan (2). 1st lunar module orbit of moon, 50,000 ft from moon's surface.
- 7/16/1969: Apollo-Saturn 11**; 195:18; Neil A. Armstrong (2), Michael Collins (2), Edwin E. "Buzz" Aldrin Jr. (2). **1st moon landing** made by Armstrong and Aldrin (7/20); collected 47.5 lbs of soil, rock samples; lunar stay time 21:36.
- 10/11/1969: *Soyuz 6**; 118:43; Georgi S. Shonin, Valery N. Kubasov. 1st welding of metals in space.
- 10/12/1969: *Soyuz 7**; 118:40; Anatoly V. Flipchenko, Vladislav N. Volkov, Viktor V. Gorbatko. Space lab construction test made; Soyuz 6, 7, and 8: 1st time three spacecraft, seven crew members orbited the Earth at once.
- 10/13/1969: *Soyuz 8**; 118:51; Vladimir A. Shatalov (2), Aleksei S. Yeliseyev (2). Part of space lab construction team.
- 11/14/1969: Apollo-Saturn 12**; 244:36; Charles Conrad Jr. (3), Richard F. Gordon Jr. (2), Alan L. Bean. Conrad and Bean made **2nd moon landing** (11/18); collected 75 lbs of samples; lunar stay time 31:31.
- 4/11/1970: Apollo-Saturn 13**; 142:54; James A. Lovell Jr. (4), Fred W. Haise Jr., John L. Swigert Jr. Aborted after service module oxygen tank ruptured; crew returned in lunar module.
- 6/1/1970: *Soyuz 9**; 17 d., 16 hr., 59 min.; Andrian G. Nikolayev (2), Vitaly I. Sevastyanov. Longest human spaceflight to date.
- 1/31/1971: Apollo-Saturn 14**; 9 d., 2 min.; Alan B. Shepard Jr. (2), Stuart A. Roosa, Edgar D. Mitchell. Shepard and Mitchell made **3rd moon landing** (2/5); collected 94 lbs of lunar samples; lunar stay 33:31.
- 4/19/1971: *Salyut 1**; launched without crew. **1st space station.**
- 4/22/1971: *Soyuz 10**; 1 d., 23 hr., 46 min.; Vladimir A. Shatalov (3), Aleksei S. Yeliseyev (3), Nikolay N. Rukavishnikov. **1st successful docking with a space station**; failed to enter space station.

6/6/1971: *Soyuz 11; 23 d., 28 hr., 22 min.; Georgi T. Dobrovolskiy, Vladislav N. Volkov (2), Viktor I. Patsayev. Docked and entered *Salyut 1* space station; **crew died** during reentry from loss of pressurization.

7/26/1971: Apollo-Saturn 15; 12 d., 17 hr., 12 min.; David R. Scott (3), James B. Irwin, Alfred M. Worden. Scott and Irwin made **4th moon landing** (7/30). 1st lunar rover use; 1st deep spacewalk; collected 170 lbs of samples; lunar stay 66:55.

4/16/1972: Apollo-Saturn 16; 11 d., 1 hr., 51 min.; John W. Young (4), Charles M. Duke Jr., Thomas K. Mattingly II. Young and Duke made **5th moon landing** (4/20); collected 209 lbs of lunar samples; lunar stay 71:02.

12/7/1972: Apollo-Saturn 17; 12 d., 13 hr., 52 min.; Eugene A. Cernan (3), Ronald E. Evans, Harrison H. Schmitt. Cernan and Schmitt made 6th and **final crewed lunar landing** (12/11); collected 243 lbs of samples; record lunar stay over 75 hr.

5/14/1973: Skylab 1; launched without crew. **1st U.S. space station**; fell out of orbit 7/11/1979.

5/25/1973: Skylab 2; 28 d., 49 min.; Charles Conrad Jr. (4), Joseph P. Kerwin, Paul J. Weitz. 1st U.S.-piloted orbiting space station; crew repaired damage caused in boost.

7/28/1973: Skylab 3; 59 d., 11 hr., 1 min.; Alan L. Bean (2), Owen K. Garriott, Jack R. Lousma. Crew systems and operational tests; scientific activities; three EVAs, 13:44.

11/16/1973: Skylab 4; 84 d., 1 hr., 16 min.; Gerald P. Carr, Edward G. Gibson, William R. Pogue. Final *Skylab* mission.

7/15/1975: *Soyuz 19 (ASTP); 6 d., 11 hr., 31 min.; Aleksei A. Leonov (2), Valery N. Kubasov (2). U.S.-USSR joint flight; crews linked up in space (7/17), conducted experiments, shared meals, held a joint news conference.

7/15/1975: Apollo (ASTP); 9 d., 7 hr., 28 min.; Vance D. Brand, Thomas P. Stafford (4), Donald K. Slayton. Joint flight with *Soyuz 19*.

12/10/1977: *Soyuz 26; 96 d., 10 hr.; Yuri V. Romanenko, Georgiy M. Grechko (2). 1st multiple docking at a space station (*Soyuz 26* and *27* docked at *Salyut 6*).

1/10/1978: *Soyuz 27; 5 d., 22 hr., 59 min.; Vladimir A. Dzhanibekov. See *Soyuz 26*.

3/2/1978: *Soyuz 28; 7 d., 22 hr., 16 min.; Aleksei A. Gubarev (2), Vladimir Remek. 1st international crew launch; Remek was 1st Czech in space.

4/12/1981: *Columbia (STS-1)*; 2 d., 6 hr., 21 min.; John W. Young (5), Robert L. Crippen. **1st reusable space shuttle** to fly into Earth's orbit.

11/12/1981: *Columbia (STS-2)*; 3 days; Joe H. Engle, Richard H. Truly. 1st scientific payload; 1st reuse of space shuttle.

11/11/1982: *Columbia (STS-5)*; 6 days; Vance D. Brand (2), Robert F. Overmyer, Joseph P. Allen, William B. Lenoir. 1st four-person crew.

6/18/1983: *Challenger (STS-7)*; 7 days; Robert L. Crippen (2), Frederick H. Hauck, John M. Fabian, Sally K. Ride, Norman E. Thagard. Ride was **1st U.S. woman in space**; 1st 5-person crew.

6/27/1983: *Soyuz T-9; 150 days; Vladimir A. Lyakhov (2), Aleksandr Pavlovich. Docked at *Salyut 7*. 1st construction in space.

8/30/1983: *Challenger (STS-8)*; 7 days; Richard H. Truly (2), Daniel C. Brandenstein, Dale A. Gardner, Guion S. Bluford Jr., William E. Thornton. Bluford was **1st African-American in space**; **1st night launch**.

11/28/1983: *Columbia (STS-9)*; 11 days; John W. Young (6), Brewster H. Shaw Jr., Owen K. Garriott (2), Robert A.R. Parker, Byron K. Lichtenberg, Ulf Merbold. 1st six-person crew; 1st Spacelab mission.

2/3/1984: *Challenger (41-B)*; 8 days; Vance Brand (3), Robert L. Gibson, Ronald E. McNair, Bruce McCandless II, Robert L.

Stewart. 1st untethered EVA.

2/8/1984: *Soyuz T-10B; 63 days; Leonid Kizim, Vladimir Solovyov, Oleg Atkov. Docked with *Salyut 7*; crew set space duration record of 237 days (since eclipsed).

4/3/1984: *Soyuz T-11; 182 days; Yury Malyshev (2), Gennady Strekalov (3), Rakesh Sharma. Docked with *Salyut 7*; Sharma was 1st Indian in space.

4/6/1984: Challenger (41-C); 7 days; Robert L. Crippen (3), Francis R. Scobee, George D. Nelson, Terry J. Hart, James D. van Hoften. 1st in-orbit satellite repair.

8/30/1984: Discovery (41-D); 7 days; Henry W. Hartsfield Jr. (2), Michael L. Coats, Richard M. Mullane, Steven A. Hawley, Judith A. Resnik, Charles D. Walker. 1st flight of non-astronaut (payload specialist Walker).

10/5/1984: Challenger (41-G); 9 days; Robert L. Crippen (4), Jon A. McBride, Kathryn D. Sullivan, Sally K. Ride (2), David C. Leestma, Marc Garneau, Paul D. Scully-Power. 1st seven-person crew.

11/8/1984: Discovery (51-A); 8 days; Frederick H. Hauck (2), David M. Walker, Anna L. Fisher, Dale A. Gardner (2), Joseph P. Allen (2). 1st satellite retrieval/repair.

4/12/1985: Discovery (51-D); 7 days; Karol J. Bobko, Donald E. Williams, Charles D. Walker (2), M. Rhea Seddon, Jeffrey A. Hoffman, S. David Griggs, E. Jake Garn. Garn (R, UT) was **1st U.S. senator in space**.

6/17/1985: Discovery (51-G); 8 days; Daniel C. Brandenstein (2), John O. Creighton, Shannon W. Lucid, John M. Fabian (2), Steven R. Nagel, Prince Sultan Salman al-Saud, Patrick Baudry. Launched three satellites; Salman al-Saud was 1st Arab in space; Baudry was 1st French person on U.S. mission.

10/3/1985: Atlantis (51-J); 5 days; Karol J. Bobko (3), Ronald J. Grabe, David C. Hilmers, Robert L. Stewart (2), William A. Pailles. 1st *Atlantis* flight.

10/30/1985: *Challenger (61-A)*; 8 days; Henry W. Hartsfield Jr. (3), Steven R. Nagel (2), James F. Buchli (2), Guion S. Bluford Jr. (2), Bonnie J. Dunbar, Wubbo J. Ockels, Richard Furrer, Ernst Messerschmid. 1st eight-person crew; 1st German Spacelab mission.

1/12/1986: *Columbia (61-C)*; 7 days; Robert L. Gibson (2), Charles F. Bolden Jr., Franklin R. Chang Díaz, Steven A. Hawley (2), George D. Nelson (2), Robert J. Cenker, Bill Nelson. B. Nelson (D, FL) was **1st U.S. representative in space**.

1/28/1986: *Challenger (51-L)*; 73 seconds; Francis R. Scobee (2), Michael J. Smith, Judith A. Resnik (2), Ellison S. Onizuka (2), Ronald E. McNair, Gregory B. Jarvis, Christa McAuliffe.

Exploded 73 seconds after liftoff; all aboard were killed, including McAuliffe, a New Hampshire schoolteacher who won competition to become 1st private citizen in space.

2/20/1986: **Mir*¹; launched without crew. **Space station** with six docking ports launched.

3/13/1986: **Soyuz T-15*; 125 days; Leonid Kizim (3), Vladimir Solovyov (2). Ferry between stations; docked at *Mir*.

9/29/1988: *Discovery (STS-26)*; 4 days; Frederick H. Hauck (3), Richard O. Covey (2), George D. Nelson (3), John M. Lounge (2), David C. Hilmer (2). **1st shuttle flight since *Challenger* explosion 1/28/1986**.

5/4/1989: *Atlantis (STS-30)*; 4 days; David M. Walker (2), Ronald J. Grabe (2), Norman E. Thagard (3), Mary L. Cleave (2), Mark C. Lee. Launched Venus orbiter *Magellan*.

10/18/1989: *Atlantis (STS-34)*; 5 days; Donald E. Williams (2), Michael J. McCulley, Shannon W. Lucid (2), Franklin R. Chang Díaz (2), Ellen S. Baker. Launched Jupiter probe and orbiter *Galileo*.

4/24/1990: *Discovery (STS-31)*; 6 days; Loren J. Shriver (2), Charles F. Bolden Jr. (2), Steven A. Hawley (3), Bruce McCandless (2), Kathryn D. Sullivan (2). **Launched Hubble Space Telescope**.

10/6/1990: *Discovery (STS-41)*; 5 days; Richard N. Richards (2), Robert D. Cabana, Bruce E. Melnick, William M. Shepherd (2), Thomas D. Akers. Launched *Ulysses* spacecraft to investigate interstellar space and the sun.

9/12/1992: *Endeavour (STS-47)*; 8 days; Robert L. Gibson (4), Curtis L. Brown Jr., Mark C. Lee (2), N. Jan Davis, Jay Apt (2), Mae Carol Jemison, Mamoru Mohri. Jemison was **1st black woman in space**; Lee and Davis were **1st married couple to travel together in space**; 1st Japanese Spacelab.

6/21/1993: *Endeavour (STS-57)*; 10 days; Ronald J. Grabe (4), Brian J. Duffy (2), G. David Low (3), Nancy J. Sherlock, Janice E. Voss, Peter J. K. Wisoff. Carried Spacelab commercial payload module.

12/2/1993: *Endeavour (STS-61)*; 11 days; Richard O. Covey (3), Kenneth D. Bowersox (2), F. Story Musgrave (5), Kathryn Thornton (3), Claude Nicollier (2), Jeffrey A. Hoffman (4), Thomas D. Akers (3). Hubble Space Telescope repaired; Akers set new U.S. EVA duration record (29 hr., 40 min.).

3/14/1995: **Soyuz TM-21*; 112 days; Norman E. Thagard (5), Vladimir Dezhurov, Gennady Strekalov (5). Docked with *Mir* 3/16. Thagard was 1st American on board Russian spacecraft; Valery Polyakov returned to Earth, 3/22/1995, after record stay in space (439 days).

6/27/1995: *Atlantis (STS-71)*; 10 days; Robert L. Gibson (5), Charles J. Precourt (2), Ellen S. Baker (3), Bonnie J. Dunbar (4), Gregory J. Harbaugh (3), Anatoly Solovyev (4) (to *Mir*), Nikolai M. Budarin (to *Mir*), Norman E. Thagard (5) (from *Mir*), Gennady Strekalov (from *Mir*), Vladimir Dezhurov (from *Mir*). **1st shuttle-*Mir* docking**; exchanged crew members with *Mir*.

11/12/1995: *Atlantis (STS-74)*; 9 days; Kenneth D. Cameron (3), James D. Halsell Jr. (2), Jerry L. Ross (5), William S. McArthur Jr. (2), Chris A. Hadfield. 2nd shuttle-*Mir* docking (11/15-11/18); erected a 15-ft permanent docking tunnel to *Mir* for future use by U.S. orbiters.

9/16/1996: *Atlantis (STS-79)*; 11 days; William F. Readdy (3), Terry W. Wilcutt (2), Thomas D. Akers (4), John E. Blaha (5) (to *Mir*), Jay Apt (4), Carl E. Walz (3), Shannon W. Lucid (5) (from *Mir*). Docked with *Mir* 9/18; exchanged crew members; Lucid set **U.S. and women's duration in space record** (188 days).

11/19/1996: *Columbia (STS-80)*; 18 days; Kenneth D. Cockrell (3), Kent V. Rominger (2), Tamara E. Jernigan (4), Thomas D. Jones (3), F. Story Musgrave (6). Longest-duration shuttle flight; Musgrave, 61, oldest thus far to fly in space; two science satellites deployed, retrieved.

8/5/1997: **Soyuz TM-26*; 198 days; Anatoly Solovyev (5), Pavel Vinogradov. Docked with *Mir* 8/7; repaired damaged space station.

8/7/1997: *Discovery (STS-85)*; 12 days; Curtis L. Brown Jr. (4), Kent V. Rominger (3), N. Jan Davis (3), Robert L. Curbeam Jr., Stephen K. Robinson, Bjarni V. Tryggvason. Deployed and retrieved satellite designed to study Earth's middle atmosphere; demonstrated robotic arm.

4/17/1998: *Columbia (STS-90)*; 16 days; Richard A. Searfoss (3), Scott D. Altman, Richard M. Linnehan (2), Dave R. Williams, Kathryn P. Hire, Jay C. Buckey, James A. Pawelczyk. Studied effects of microgravity on the nervous systems of the crew and more than 2,000 live animals; 1st surgery in space on animals meant to survive.

6/2/1998: *Discovery (STS-91)*; 10 days; Charles J. Precourt (4), Dominic L. Gorie, Wendy B. Lawrence (3), Franklin R. Chang Díaz (6), Janet L. Kavandi, Valery V. Ryumin (4), Andrew S. W. Thomas (2) (from *Mir*). Final docking mission with *Mir*; Thomas from *Mir*, 141 days in space.

10/29/1998: *Discovery (STS-95)*; 10 days; Curtis L. Brown Jr. (5), Steven W. Lindsey (2), Scott E. Parazynski (3), Stephen K. Robinson (2), Pedro Duque, Chiaki Mukai (2), John H. Glenn Jr. (2). The 77-year-old Glenn, one of the original *Mercury* astronauts, and at that point a senator (D, OH), became **oldest**

person to fly in space; Duque was 1st Spaniard in space; experiments to study aging performed on Glenn.

12/4/1998: *Endeavour (STS-88)*; 12 days; Robert D. Cabana (4), Frederick W. Sturckow, Nancy J. Currie (3), Jerry L. Ross (6), James H. Newman (3), Sergei K. Krikalev (4). **1st assembly of International Space Station (ISS)**; attached U.S.-built *Unity* connecting module to Russian-built *Zarya* control module; 1st crew to enter ISS.

7/23/1999: *Columbia (STS-93)*; 5 days; Eileen M. Collins (3), Jeffrey S. Ashby, Steven A. Hawley (5), Catherine G. Coleman (2), Michel Tognini (2). Collins was **1st woman space shuttle commander**; deployed Chandra X-ray Observatory telescope.

2/11/2000: *Endeavour (STS-99)*; 12 days; Kevin R. Kregel (4), Dominic L. Gorie (2), Janet L. Kavandi (2), Janice E. Voss (5), Mamoru Mohri (2), Gerhard P.J. Thiele. Used radar to make most complete topographic map of Earth's surface ever produced.

10/31/2000: **Soyuz TM-31*; William M. Shepherd (4), Yuri Gidzenko (2), Sergei Krikalev (5). Established **1st permanent manning of ISS** with three-person crew for a 4-month stay.

7/12/2001: *Atlantis (STS-104)*; 13 days; Steven W. Lindsey (3), Charles O. Hobaugh, Michael L. Gernhardt (4), Janet L. Kavandi (3), James F. Reilly II (2). Installed the Joint Airlock, with nitrogen and oxygen tanks to permit future spacewalks from the ISS; three EVAs.

10/30/2002: **Soyuz TMA-1¹*; Sergei Zalyotin (2), Frank De Winne, Yuri Lonchakov (2). 1st launch of *Soyuz TMA* (crew returned 11/10/2002 on *Soyuz TM-34* already docked at ISS).

1/16/2003: *Columbia (STS 107)*; 16 days; Rick D. Husband (2), William C. McCool, Michael P. Anderson (2), David M. Brown, Kalpana Chawla (2), Laurel B. Clark, Ilan Ramon. **Entire crew lost when *Columbia* broke apart** upon reentry, 2/1, due to heat shield damage; Ramon was 1st Israeli astronaut.

10/15/2003: *Shenzhou 5; 21 hr.; Yang Liwei. **1st Chinese manned spacecraft.**

6/21/2004: SpaceShipOne²; 90 min.; Mike Melvill. **1st privately funded manned spaceflight.**

7/26/2005: Discovery (STS-114); 14 days; Eileen M. Collins (4), James M. Kelly (2), Charles J. Camarda, Wendy B. Lawrence (4), Soichi Noguchi, Stephen K. Robinson (3), Andrew S.W. Thomas (3). **1st space shuttle flight since Columbia disaster**; tested new safety modifications to craft.

6/8/2007: Atlantis (STS-117); 14 days; Frederick W. Sturckow (3), Lee J. Archambault, Patrick G. Forrester (2), John “Danny” Olivas, James F. Reilly (3), Steven R. Swanson, Clayton C. Anderson (to ISS), Sunita L. Williams (from ISS). Delivered truss segments and solar arrays to ISS; Williams set new record for **longest spaceflight by a woman (195 days).**

8/8/2007: Endeavour (STS-118); 13 days; Scott J. Kelly (2), Charles O. Hobaugh (2), Alvin B. Drew, Barbara R. Morgan, Tracy Caldwell Dyson, Rick A. Mastracchio (2), Dave R. Williams (2). Brought **Teacher in Space** project participant Morgan to ISS; attached new truss.

10/10/2007: *Soyuz TMA-11¹; Yuri I. Malenchenko (3), Sheikh Muszaphar Shukor (to ISS), Peggy A. Whitson (2) (from ISS), Yi So-yeon (from ISS). Delivered and installed components of ISS; malfunctioned on return to Earth, landing short of its touchdown area but causing no fatalities.

3/11/2008: Endeavour (STS-123); 16 days; Dominic L. Gorie (4), Gregory H. Johnson, Richard M. Linnehan (4), Robert L. Behnken, Michael J. Foreman, Takao Doi (2), Garrett E. Reisman (to ISS), Léopold Eyharts (from ISS). Delivered components of the Japanese Kibo science laboratory.

4/8/2008: *Soyuz TMA-12¹; Oleg Kononenko, Sergei Volkov, Yi So-yeon (to ISS), Richard Garriott (from ISS). Yi became **1st S. Korean in space.**

9/25/2008: *Shenzhou 7; 68 hr.; Jing Haipeng, Liu Boming, Zhai Zhigang. Zhai completed **1st Chinese spacewalk**.

5/11/2009: Atlantis (STS-125); 13 days; Scott D. Altman (4), Gregory C. Johnson, Andrew J. Feustel, Michael T. Good, John M. Grunsfeld (5), Michael J. Massimino (2), K. Megan McArthur. Final Hubble Space Telescope servicing mission.

6/15/2010: *Soyuz TMA-19¹; Fyodor Yurchikhin (3), Shannon Walker, Douglas H. Wheelock (2). 100th mission since launching of the International Space Station.

7/8/2011: Atlantis (STS-135); 13 days; Christopher Ferguson (3), Doug Hurley (2), Sandy H. Magnus (3), Rex J. Walheim (3). **Final space shuttle mission.**

5/30/2020: SpaceX Demo-2; Robert L. Behnken (3), Douglas G. Hurley (3). **1st commercially operated crewed spaceflight** to carry Americans into orbit.

Note: Four Soviet cosmonauts have died during spaceflight: one person was killed on *Soyuz 1* (1967) when parachute lines tangled during descent; the three-person *Soyuz 11* crew (1971) was asphyxiated. Three Americans died in the *Apollo 1* (1967) fire on the ground at Cape Canaveral, FL; seven Americans died in the *Challenger* (1986) explosion; and six Americans and an Israeli astronaut died aboard *Columbia* (2003). (1) *Soyuz* crew often return from the ISS on spacecraft that launched and were docked at the station before their arrival. (2) Date of first successful flight; later, *SpaceShipOne* flew at least 100 km (62 mi) into space, 9/29/2004, piloted by Mike Melvill, and 10/4/2004, piloted by Brian Binnie, winning the \$10-mil Ansari Prize for first private venture to accomplish this feat twice within two weeks.

U.S. Space Shuttles

Source: National Aeronautics and Space Administration (NASA)

After 135 launches, the United States ended its space shuttle program with the safe landing of the *Atlantis* shuttle on July 21, 2011, at Florida's Kennedy Space Center. Two shuttles—*Challenger* in

1986 and *Columbia* in 2003—were destroyed in flight. The surviving shuttles are now on display at museums. *Enterprise* performed atmospheric test flights but never flew in space.

International Space Station

Source: National Aeronautics and Space Administration (NASA)

Construction on the International Space Station (ISS) began in 1998 and was completed in 2011. It has been inhabited continuously since 2000 and visited by more than 258 crew members from 20 countries as of Aug. 2022. In July 2022, Russia announced that it would no longer participate in the ISS after 2024.

Cooperating nations: Belgium, Canada, Denmark, France, Germany, Italy, Japan, Netherlands, Norway, Russia, Spain, Sweden, Switzerland, United Kingdom, and U.S. As of Aug. 2022, individuals from all of these countries (except Norway and Switzerland) have flown to the ISS, as have visitors from Brazil, Israel, Kazakhstan, Malaysia, South Africa, South Korea, and the United Arab Emirates.

About the ISS

- It has a mass of 924,739 lbs and is about as long as a football field at 357.5 ft.
- It is entirely powered by an acre of solar panels.
- It requires three people to keep it running but has room for up to 10 people to live aboard.
- Astronauts typically spend 4-6 months aboard.

ISS Research

- Effects of long-term exposure to reduced gravity on humans, plants, crystals, cells, and pathogens
- Recording large-scale long-term changes in Earth's environment by observing the planet from orbit
- Testing recycling technologies for human life support

NASA Explores New Missions on Earth and Beyond

Launched Dec. 25, 2021, NASA's James Webb Space Telescope (JWST) returned its first images in July 2022, revealing, in brilliant color, never-seen areas of the universe. While the \$10-bil JWST has been heralded as the successor to the Hubble Space Telescope, its capabilities represent a giant leap for the study of the cosmos. The Hubble is primarily an optical telescope, capturing wavelengths of light like the way the human eye does, only magnified. The JWST is an infrared telescope, observing parts of the universe that are not visible to the human eye. Light pollution makes infrared astronomy extremely difficult to conduct from the ground but not from a million miles away from Earth, where the JWST operates. The JWST is scheduled to continue returning more images for the next 5-10+ years.

After more than 60 years of exploring the universe, NASA planned to launch a handful of missions in the fall of 2022 to improve the quality of life on Earth. The X-57 "Maxwell" is NASA's first all-electric experimental aircraft, aimed at making flying cleaner, quieter, and more environmentally sustainable. Using a modified version of an existing combustion engine plane, the X-57's 14 electric motors and propellers produce a high-speed cruise efficiency 500 percent higher than conventional aircraft, with zero in-flight carbon emissions.

The average speed of commercial aircraft hasn't increased significantly in more than 60 years. This can be partly explained by economics: flying at higher speeds uses exponentially more fuel. The sonic boom caused when a plane exceeds the sound barrier is

another hurdle. Nobody wants to hear the equivalent of a pyrotechnic explosion every time a plane passes overhead. There's no way to prevent sonic booms, but the design and shape of NASA's X-59 Quesst aircraft seeks to reduce the audio volume from a loud thunderclap to a gentle thump. The mission also seeks data on human responses to the sound generated during human flight. If successful, Quesst could ultimately increase flight speeds, vastly reducing travel time.

SWOT, short for Surface Water and Ocean Topography, is a joint venture with France's Centre National D'Etudes Spatiales, with contributions from NASA's counterparts in Canada and the UK. Scheduled for launch in Nov. 2022, this satellite will make the first global survey of Earth's oceans, lakes, and rivers to determine how much water they contain and how those levels change over time. This information will help scientists understand the effects of climate change on the global water cycle and learn more about the ocean's ability to absorb greenhouse gases like carbon dioxide. The information will also inform our understanding of beach and shoreline erosion and dispersal of water pollutants.

Summary of Worldwide Successful Launches, 1957-2021

Notable Lunar and Planetary Science Missions

Source: National Aeronautics and Space Administration (NASA)

Spacecraft	Launch date¹	Mission	Mission notes
Mariner 2	Aug. 27,	Venus	Passed within 22,000 mi of

	1962		Venus 12/14/1962; confirmed high surface temperature on planet; contact lost 1/3/1963 at 54 mil mi.
Ranger 7	July 28, 1964	Moon	Yielded over 4,000 photos of lunar surface.
Mariner 4	Nov. 28, 1964	Mars	1st probe to fly by Mars; passed behind planet 7/14/1965.
Ranger 8	Feb. 17, 1965	Moon	Yielded over 7,000 photos of lunar surface.
Venera 3	Nov. 16, 1965	Venus	Soviet probe; 1st artificial probe to impact on the surface of another planet, 3/1/1966; probe failed to send back data.
Surveyor 3	Apr. 17, 1967	Moon	Scooped and tested lunar soil.
Mariner 5	June 14, 1967	Venus	In solar orbit; closest Venus flyby 10/19/1967; allowed scientists to obtain accurate readings on the composition of the Venusian atmosphere.
Mariner 6	Feb. 24, 1969	Mars	Came within 2,000 mi of Mars 7/31/1969; collected data, photos.
Mariner 7	Mar. 27, 1969	Mars	Came within 2,000 mi of Mars 8/5/1969.
Venera 7	Aug. 17, 1970	Venus	Soviet probe; 1st probe to land safely on the surface of another planet.
Mariner 9	May 30, 1971	Mars	1st craft to orbit Mars 11/13/1971; sent back over 7,000 photos.
Pioneer 10	Mar. 2, 1972	Jupiter	Passed Jupiter 12/4/1973; took readings on Jupiter's composition. Exited planetary system 6/13/1983; last signal received 1/23/2003 from 7.6 bil mi.
Pioneer 11	Apr. 5, 1973	Jupiter, Saturn	Passed Jupiter 12/3/1974, Saturn 9/1/1979; discovered an additional ring and 2 moons around Saturn. Transmission ended 9/30/1995.
Mariner 10	Nov. 3, 1973	Venus, Mercury	Passed Venus 2/5/1974, arrived at Mercury 3/29/1974. 1st time gravity of a planet (Venus) used to whip spacecraft toward another

			(Mercury); 1st probe to visit 2 planets.
Viking 1	Aug. 20, 1975	Mars	Landed on Mars 7/20/1976; 1st probe to land safely on Mars; performed chemical analysis of soil; functioned 6 years.
Viking 2	Sept. 9, 1975	Mars	Sister probe of <i>Viking 1</i> ; landed on Mars 9/3/1976; functioned 3 years.
Voyager 2	Aug. 20, 1977	Jupiter, Saturn, Uranus, Neptune	Encountered Jupiter 7/9/1979, Saturn 8/25/1981, Uranus 1/24/1986, Neptune 8/25/1989. Confirmed existence of rings around Neptune. As of 8/2022 it was 12.2 bil mi from sun and still returning data to Earth.
Voyager 1	Sept. 5, 1977	Jupiter, Saturn	Encountered Jupiter 3/5/1979; provided evidence of rings around Jupiter; passed Saturn 11/12/1980; became most distant human-made object 2/17/1998. As of 8/2022 it was 14.6 bil mi from sun and still returning data to Earth.
Pioneer Venus 1	May 20, 1978	Venus	Entered Venus orbit 12/4/1978; studied atmosphere, magnetic field, weather, and surface; fuel ran out; probe was destroyed in atmospheric entry, 8/1992.
Pioneer Venus 2 (multiprobe)	Aug. 8, 1978	Venus	Consisted of a “bus” carrying 1 large and 3 small atmospheric probes. All 4 probes entered the Venus atmosphere 12/9/1978.
Magellan	May 4, 1989	Venus	Landed on Venus 8/10/1990; monitored geological activity; mapped more than 99% of planet surface, showed that about 85% is covered by volcanic flows; ceased operating 10/11/1994.
Galileo	Oct. 18, 1989	Jupiter	Used Earth’s gravity to propel itself towards Jupiter; encountered Venus 2/10/1990, Jupiter 12/7/1995; encountered moons. Released probe into Jovian atmosphere; intentionally flown into Jupiter 9/21/2003.

Mars Global Surveyor	Nov. 7, 1996	Mars	Began orbiting Mars 9/11/1997; began mapping entire surface 3/9/1999; discovered a weak magnetic field on planet; observed Martian moon Phobos; found evidence of liquid water in past 6/22/2000.
Mars Pathfinder	Dec. 4, 1996	Mars	Landed on Mars 7/4/1997; rover <i>Sojourner</i> measured of climate and soil composition, sent surface images; ceased operating 9/27/1997.
Cassini-Huygens	Oct. 15, 1997	Saturn	Began orbiting Saturn 6/30/2004; spotted evidence of a subterranean ocean and hot spots region on moon Titan; detected an atmosphere on moon Enceladus. Intentionally destroyed 9/15/2017. <i>Huygens</i> probe landed on Titan 1/14/2005; found possible water ice, channels carved by liquid methane springs.
Lunar Prospector	Jan. 6, 1998	Moon	Began orbiting moon 1/11/1998; mapped abundance of 11 elements on moon's surface; discovered evidence of water ice at both lunar poles.
Deep Space 1	Oct. 24, 1998	Comet Borrelly	Flew within 1,500 mi of comet; sent back photos showing 6-mi-long nucleus.
Stardust	Feb. 7, 1999	Comet Wild 2	Reached comet 1/2/2004; gathered dust samples, capsule returned to Earth 1/15/2006. Spacecraft, on new mission Stardust-NEXT (follow up for Deep Impact), reached comet Tempel 1, 2/14/2011.
2001 Mars Odyssey	Apr. 7, 2001	Mars	Reached Mars 10/24/2001; detected evidence of water ice near south pole; primary mission to study climate and geologic history completed 8/2004; began extended mission, aiming to identify minerals on Mars.
Genesis	Aug. 8, 2001	Sun	Orbited sun, collected particles

			from solar wind; capsule containing specimens crashed to Earth 9/8/2004; some samples survived.
Mars Express/Beagle 2 lander	June 3, 2003	Mars	1st European Space Agency probe to another planet; arrived at Mars 12/2003; performed remote sensing including photography in search of subsurface water. <i>Beagle 2</i> lander was deployed 12/19/2003, but contact was lost.
Mars Exploration Rovers	June 7 and July 10, 2003	Mars	Rovers <i>Spirit</i> and <i>Opportunity</i> landed on Mars 1/2004, found further evidence that water existed on surface; <i>Spirit</i> took 1st photo of a Martian meteor; survived severe dust storms in 2007. <i>Opportunity</i> explored massive Victoria Crater 2007-08, set record for most distance driven off-Earth (25 mi) 7/2014.
MESSENGER	Mar. 2, 2004	Mercury	Began returning images of Mercury during initial flyby 1/14/2008; entered orbit 3/17/2011; delivered 100,000th image 5/3/2012; impacted Mercury 4/30/2015.
Deep Impact	Jan. 12, 2005	Comet Tempel 1	Reached Tempel 1; deployed impact probe that slammed into comet 7/4/2005 with force roughly equivalent to 5 tons of TNT. Flyby spacecraft, on supplemental mission EPOXI, reached comet Hartley 2, 11/4/2010.
Mars Reconnaissance Orbiter	Aug. 12, 2005	Mars	Reached Mars 3/10/2006 and began taking detailed images of Martian surface; in 3/2008, found salt deposits suggesting ancient water supplies; in 6/2008, found largest known impact crater in solar system.
New Horizons (Pluto)	Jan. 19, 2006	Pluto, Charon	Flew past Jupiter 7/2007 on its way to Pluto and its largest moon, Charon. Returned first-ever photographs of Pluto 7/14/2015. Began examining other objects in the Kuiper Belt in 2019.

Phoenix Mars Lander	Aug. 4, 2007	Mars	Landed on Mars 5/25/2008; examined northern polar region, analyzed weather/minerals; water ice verified 7/31/2008; lost contact 11/2/2008.
Dawn	Sept. 27, 2007	Asteroid Belt (bet. Jupiter and Mars)	Will compare evolution of dwarf planet Ceres with Vesta, an asteroid, in an effort to shed light on formation of the solar system. Departed Vesta 8/2012; reached Ceres 3/6/2015.
Kepler/K2	Mar. 9, 2009	Extrasolar planets	Detect potentially habitable Earth-size planets around other Milky Way stars. Kepler confirmed existence of more than 2,600 exoplanets before running out of fuel in Oct. 2018.
Lunar Crater Observation and Sensing Satellite	June 18, 2009	Moon	Impacted the Cabeus crater; detected presence of water ice in moon's surface 10/9/2009. Lunar Reconnaissance Orbiter (LRO), launched with LCROSS, mapped moon's surface.
Juno	Aug. 5, 2011	Jupiter	Entered Jupiter's orbit, 7/4/2016; began returning data and color images that improve understanding of the formation of the planet and solar system.
Mars Science Laboratory	Nov. 26, 2011	Mars	<i>Curiosity</i> rover landed on Mars 8/6/2012 and began assessing Mars's past and present ability to support life.
Lunar Atmosphere and Dust Environment Explorer	Sept. 6, 2013	Moon	Studied the fragile lunar atmosphere from orbit for 100 days; impacted with lunar surface 4/17/2014.
Mars Atmosphere and Volatile Evolution (MAVEN)	Nov. 18, 2013	Mars	Entered orbit 9/21/2014; exploring Mars's upper atmosphere to determine how planet's loss of atmospheric gas changed its climate from a warmer, wetter environment to a cold desert.
OSIRIS-REx	Sept. 8, 2016	Bennu (asteroid)	Retrieve a sample by 9/2023 to help understand the source of Earth's organic materials and water

and improve understanding of potential asteroid-Earth impacts. Entered into orbit around Bennu 12/31/2018.

Transiting Exoplanet Survey Satellite	Apr. 18, 2018	Extrasolar planets	Survey 200,000 of the brightest nearby stars in search of planets outside our solar system.
InSight	May 5, 2018	Mars	Landed 11/26/2018; began drilling in 2019 beneath surface to investigate how rocky planets form and develop.
Parker Solar Probe	Aug. 12, 2018	Sun	First mission to observe the sun from within its atmosphere. Will fly within 3.8 mil miles of the sun's surface. Passed Venus 10/3/2018.
ICESat-2	Sept. 15, 2018	Earth	Initiated ultra-precise measurements of Earth's ice sheets and glaciers and how changes are affecting rising sea levels.
Mars Perseverance	July 30, 2020	Mars	Landed 2/18/2021; launched drone helicopter on first powered, controlled flight, 4/19/2021.
James Webb Space Telescope	Nov. 2021	Universe	Replaced Hubble Space Telescope as the world's premier astronomical observatory. Returned first high-resolution color images 7/2022.
Double Asteroid Redirection Test (DART)	Nov. 24, 2021	Asteroid <i>Dimorphos</i>	Crashed into asteroid 9/26/2022 to assess human ability to alter its speed and orbit in order to prevent an asteroid or comet from hitting Earth.
Artemis I	Fall 2022	Moon	Explore lunar surface in preparation for human flight to Mars.
SPHEREx	June 2024	Milky Way galaxy and beyond	Spectro-Photometer for the History of the Universe, Epoch of Reionization and Ices Explorer will collect data on more than 300 million galaxies and 100 million stars to explore the origins of the universe.
Europa Clipper	Oct. 2024	Europa	Assess if Europa, Jupiter's icy, ocean-bearing moon, is suitable for life.

Note: U.S./NASA missions unless otherwise noted. (1) In Coordinated Universal Time.

General Aviation and Air Taxi Active Aircraft, 2020

Milestones in Aviation History

Source: National Aeronautics and Space Administration (NASA); Smithsonian National Air and Space Museum; Air Transport Association of America; National Museum of the U.S. Air Force (USAF); National Park Service, U.S. Dept. of the Interior

1903, Dec. 17: Brothers Wilbur and Orville Wright (U.S.) made the first human-carrying, powered flight near Kitty Hawk, NC. Each brother made two flights; the longest, about 852 ft, lasted 59 sec.

1908, May 14: Charles Furnas (U.S.), worker for Wright brothers, became first American airplane passenger.

1911, Feb.: The Burgess Company and Curtiss, Inc. receive authorization to build Wright planes, becoming the first licensed airplane manufacturer in the U.S.

1911, Sept. 23: First transportation of mail by airplane officially approved by the U.S. Postal Service.

1914, Jan. 1: First scheduled passenger airline service began.

1914, June 18: Lawrence Burst Sperry (U.S.) released the controls and stood in his airborne plane, successfully demonstrating his gyrostabilizer, the first autopilot system.

1918, Mar. 6: The Curtiss-Sperry "Flying Bomb" (U.S.) made its first successful flight. The first radio-controlled plane led to the development of cruise missiles.

1918, May 15: First scheduled airmail service began, between New York and Washington, DC, with intermediate stop in Philadelphia. In 1921, scheduled transcontinental airmail service began between New York City and San Francisco.

1919, June 14-15: Capt. John Alcock (UK) and Lt. Arthur W. Brown (U.S.) completed the first nonstop flight across the Atlantic Ocean. They traveled from Newfoundland, Canada, to Ireland in 16 hr., 12 min.

1923, Aug.: Rotating beacons enabled the first U.S. night flights.

1924, Apr. 6-Sept. 28: Two U.S. Army planes landed in Seattle, completing the first circumnavigation of the globe. They completed the 26,000-mi journey in 371 hours of flying time.

1926, May 12-13: Roald Amundsen (Norway), Umberto Nobile (Italy), Lincoln Ellsworth (U.S.), and Oscar Wisting (Norway) made the first flight over the North Pole, in a dirigible that flew between Spitsbergen, Norway, and Teller, AK. Two weeks earlier, Adm. Richard E. Byrd and Floyd Bennett (both U.S.) claimed to have made the first flight over the Pole (May 9, 1926) in a Fokker F-VII. But when Byrd's diary was released to the public in 1996, some historians began to question whether his plane had reached the Pole.

1927, May 20-21: Charles Lindbergh (U.S.) completed the first solo transatlantic flight in the *Spirit of St. Louis*. "Lucky Lindy" traveled 3,610 mi from New York to Paris in 33 hr., 29 min., 30 sec.

1929, Aug. 8-29: Hugo Eckener (Germany) piloted the *Graf Zeppelin* around the world in record time: 20,373 mi in 21 days, 5 hr., 31 min.

1929, Nov. 28: Richard E. Byrd, Harold June, Ashley McKinley (all U.S.) and Bernt Balchen (Norway) became first to fly over the South Pole, in 18 hr., 41 min. round trip from Ross Ice Shelf base.

1930, May 15: Ellen Church (U.S.) became first flight attendant.

1931, June 23-July 1: Wiley Post (U.S.) and Harold Gatty (Austral.-U.S.) broke the speed record for around-the-world flight, traveling 15,474 mi in 8 days, 15 hr., 51 min., in the monoplane *Winnie Mae*.

1931, Oct. 3-5: Clyde Pangborn and Hugh Herndon (both U.S.) completed the first nonstop transpacific flight. They traveled 4,558 mi from Misawa, Japan, to East Wenatchee, WA, in 41 hr., 34 min.

1932, May 20-21: Amelia Earhart (U.S.) completed first solo transoceanic flight by a woman, making the 2,026-mi journey

from Newfoundland, Canada, to Ireland in 14 hr., 56 min.

1933, July 15-22: Wiley Post completed the first solo circumnavigation of the globe. His 15,596-mi trip took 7 days, 18 hr., 49 min.

1936, June 25: American Airlines began scheduled passenger service of the first Douglas DC-3 aircraft. The DC-3 was the first aircraft with a kitchen onboard and hence offered the first in-flight hot meal service.

1937, May 6: German *Hindenburg* zeppelin exploded in Lakehurst, NJ, killing 35 of the 97 people aboard (and one on the ground). The airship had made 34 transatlantic flights in 1936.

1938, July 10-13: Howard Hughes (U.S.) and four assistants established a new speed record for circumnavigating the globe: 14,824 mi in 3 days, 9 hr., 17 min.

1939, Aug. 27: The German-made Heinkel He 178 made the first successful flight powered by a jet engine.

1947, Oct. 14: Chuck Yeager (U.S.) broke the sound barrier, reaching Mach 1 in a Bell X-1 rocket-powered aircraft.

1947, Nov. 2: Howard Hughes piloted the *Spruce Goose* on its maiden and only flight. The largest airplane ever built at the time, it could carry 750 troops or two Sherman tanks.

1949, Mar. 2: James Gallagher (U.S.) piloted the first round-the-world flight refueled in midair. The *Lucky Lady* USAF B-50 covered 23,452 mi in 94 hr., 1 min. and refueled four times.

1950, Sept. 22: Col. David Schilling (USAF) made the first nonstop transatlantic jet flight, covering 3,300 mi in 10 hr., 1 min.

1952, Aug. 26: The UK bomber Canberra made the first round-trip transatlantic crossing on the same day, from Northern Ireland to Newfoundland, Canada, and back in 7 hr., 59 min.

1953, May 18: Jacqueline Cochran (U.S.) became the first woman to fly faster than the speed of sound.

1956, Mar. 10: Britain's Fairey FD-2 aircraft set a world speed record of 1,132 mph.

- 1956, Nov. 11:** Convair B-58 (USAF), the first supersonic bomber, was introduced.
- 1957, Jan. 15-18:** Three USAF B-52 Stratofortresses made the first nonstop global flight by jet planes. They were refueled in flight by KC-97 aerial tankers.
- 1958, Oct. 24:** A Mirage III-A achieved Mach 2 (twice the speed of sound) in level flight, first European plane to do so.
- 1962, Nov. 29:** Britain and France signed an agreement to jointly develop the Concorde, a supersonic plane that could fly twice as fast as most U.S. jets.
- 1969, June 5:** The Soviet Tupolev Tu-144 became the first passenger airliner to break the sound barrier.
- 1970, May 26:** The Tupolev Tu-144 became first passenger airline to exceed Mach 2 with a top speed of about 1,335 mph at 53,475 ft.
- 1976, Aug. 23:** The Concorde began the first scheduled supersonic commercial service.
- 1977, Aug. 23:** The *Gossamer Condor*, built by aeronautical engineer Paul MacCready (U.S.), successfully demonstrated human-powered flight through pedalling, completing a figure-8 course of 1.15 mi.
- 1979, June 12:** MacCready's human-powered *Gossamer Albatross* crossed the English Channel in 2 hr., 49 min.
- 1981, July 7:** MacCready-developed *Solar Challenger* became first solar-powered airplane to cross the English Channel.
- 1995, Aug. 15-16:** The Concorde set a new around-the-world speed record of 31 hr., 27 min., 49 sec.
- 1999, Mar. 1-21:** Bertrand Piccard (Switz.) and Brian Jones (UK) completed the first around-the-world flight in a hot-air balloon. Their 29,055-mi journey lasted 19 days, 21 hr., 55 min.
- 2001, Aug. 13:** Solar-powered, propeller-driven plane *Helios* (NASA) reached 96,863 ft, breaking altitude record for non-rocket-powered aircraft.

2002, June 19-July 4: Steve Fossett (U.S.) completed the first nonstop solo circumnavigation of globe in a balloon.

2003, Nov. 26: The Concorde flew its final flight.

2005, Mar. 1-3: Steve Fossett achieved the first nonstop solo circumnavigation in an airplane without refueling.

2011, Feb. 4: Northrop Grumman and the U.S. Navy reported the first successful flight for the unmanned X-47B fighter jet.

2012, May 22-31: SpaceX became the first private company to successfully launch (and later recover) a spacecraft to the International Space Station.

2016, July 26: *Solar Impulse 2* became first fuel-free plane to circumnavigate the globe. The 17-leg journey began in Mar. 2015.

2019, Apr. 13: *Stratolaunch* aircraft, with world's longest wingspan, made its maiden voyage (and perhaps its last; the company was put up for sale in June 2019). Its design enabled it to launch satellites into space from 35,000 ft, saving rocket fuel.

2020, May 31: A SpaceX Crew Dragon capsule safely delivered two NASA astronauts to the ISS, marking the first time a private spacecraft carried passengers into orbit without government involvement.

ASTRONOMY

Edited by Laurence A. Marschall, Prof. Emeritus, Dept. of Physics
and Astronomy, Gettysburg College

Celestial Events Summary, 2023

There are four eclipses in 2023: one hybrid solar eclipse, one annular solar eclipse, one penumbral lunar eclipse, and one partial lunar eclipse. The more widely visible solar event, the annular solar eclipse of Oct. 14, will be visible along a track stretching from the NW coast of North America, through Central America and Colombia, to the E coast of Brazil. The other solar eclipse, the hybrid eclipse of Apr. 20, is visible from the S Indian Ocean, Australia, New Guinea, Indonesia, and parts of the W Pacific; it is unusual in that it will be total over the central parts of its track and annular at the beginning and end (near sunrise and sunset). The two total lunar eclipses will be widely visible from populated areas: most of Europe, Asia, Africa, and parts of Australia, but the May 5 eclipse, during which the full moon passes through only the outer part of Earth's shadow, the penumbra, will produce a barely noticeable dimming of the moon; and on Oct. 28 only the southern edge of the moon will pass through the darker part of the Earth's shadow, the umbra.

The best meteor showers for viewing may be the Perseids of mid-Aug. and the Geminids in mid-Dec., which are likely to peak under dark moonless skies after midnight. The Draconids and the Orionids in Oct. also occur in relatively moonless skies. Other meteor showers in 2023 will be hampered by unfavorably bright moon phases, though some activity will be visible, especially from dark rural sites.

Venus will be visible in the evening sky Jan.-July, until it approaches conjunction with the sun, and it reappears in the predawn sky in Sept.-Dec. Mars is in the evening sky Jan.-June, reaching conjunction with the sun on Nov. 18. Jupiter is visible in the early evening Jan.-Mar., reaching conjunction with the sun in Apr.,

and reappearing in the morning sky in June, moving to the evening sky in the late fall when it passes opposition in Nov. Saturn, similarly, is an evening object through the early part of Jan., reaching conjunction in Feb., then visible in the morning sky in May and becoming visible all night in Aug. and then as an evening object near the end of the year. Mercury, frequently too close to the sun for easy viewing, begins the year in the evening sky. It is in the morning sky in Feb., May, June, Sept., and Oct. and in the evening in Apr., Aug., and Dec. The best opportunities for seeing Mercury in the morning sky are near western elongation Jan. 30, May 29, and Sept. 22, while the best opportunities to see it in the evening sky occur at eastern elongation on Apr. 11, Aug. 10, and Dec. 4.

The crescent moon, with its subdued light, regularly pairs with the two brightest planets, Venus and Jupiter. Waxing crescent pairings are visible in the early evening soon after sunset, while waning crescent pairings are visible in the early morning before sunrise. In 2023 the waxing crescent moon pairs with Venus in Jan.-June. The waxing crescent moon pairs with Jupiter in the evening Jan.-Mar.; the waning crescent pairs with Venus in Oct.-Dec. and with Jupiter in the May predawn sky. The moon will occult three bright planets this year: Venus on Mar. 24 and Nov. 9; Mars on Jan. 3, Feb. 28, and Sept. 16; and Jupiter on Feb. 22, Mar. 22, and May 17. The most noticeable planetary conjunctions of the year occur when Venus and Saturn pass close to each other on Jan. 22 and Venus and Jupiter on Mar. 2.

Astronomical Positions and Constants

Two celestial bodies are in **conjunction** when they are due north and south of each other, either in **right ascension** (with respect to the north celestial pole) or in **celestial longitude** (with respect to the north ecliptic pole). Celestial bodies in conjunction will rise and set at nearly the same time. For the inner planets—Mercury and Venus—**inferior conjunction** occurs when either planet passes between Earth and the sun, while **superior conjunction** occurs when either Mercury or Venus is on the far side of the sun. Celestial bodies are in **opposition** when their right ascensions differ by exactly 12 hours, or

when their celestial longitudes differ by 180° . In this case one of the two objects in opposition will rise while the other is setting. **Quadrature** refers to the arrangement where the coordinates of two bodies differ by exactly 90° . These terms may refer to the relative positions of any two bodies as seen from Earth, but one of the bodies is so frequently the sun that mention of the sun is omitted in that case.

When objects are in conjunction, the alignment is not perfect, and one usually passes above or below the other. The geocentric angular separation between the sun and an object is termed **elongation**. Elongation is limited only for Mercury and Venus; the greatest elongation for each of these bodies is approximately the time for longest observation. **Perihelion** is the point in an object's orbit when it is nearest to the sun, and **aphelion** is the point when it is farthest from the sun. **Perigee** is the point in an orbit where an object is nearest Earth, **apogee** the point when it is farthest from Earth. An **occultation** of a planet or a star is an eclipse of it by some other body, usually the moon. A **transit** of the sun occurs when Mercury or Venus passes directly between Earth and the sun, appearing to cross the sun's disk.

The following were adopted as part of the International Astronomical Union System of Astronomical Constants (1976/2009): **Speed of light**, 299,792.458 km per sec., or about 186,282 statute mi per sec.; **solar parallax**, $8''.794143$; **astronomical unit** (AU or au, mean distance between the Earth and sun), 149,597,870,700 m, or 92,955,807 mi; **constant of nutation**, $9''.2025$; and **constant of aberration**, $20''.49552$.

Celestial Events Highlights, 2023

(In Coordinated Universal Time, or UTC, the standard time of the prime meridian.)

January

Mercury is very low in the W in the evening and low in the E in the morning by mid-month.

Venus is low in the W in early evening.

Mars is visible all night, rising near sunset in the E and near the meridian at midnight.

Jupiter, Saturn, Uranus, and Neptune are visible low in the W in early evening.

Jan. 1: Moon at ascending node

Jan. 2: Mercury at perihelion

Jan. 3: Pleiades 2.6°N of moon; Mars 0.5°N of moon: occultation of Mars by moon

Jan. 4: Quadrantid meteor shower; Earth at perihelion

Jan. 6: Full moon

Jan. 7: Mercury at inferior conjunction; Pollux 1.9°N of moon

Jan. 8: Moon at apogee

Jan. 14: Spica 3.9°S of moon

Jan. 15: Last quarter moon

Jan. 16: Moon at descending node

Jan. 18: Antares 2.1°S of moon

Jan. 20: Jupiter at perihelion

Jan. 21: New moon; moon at perigee

Jan. 22: Venus 0.3°S of Saturn

Jan. 23: Saturn 3.8°N of moon; Venus 3.5°N of moon

Jan. 26: Jupiter 1.8°N of moon

Jan. 28: Moon at ascending node; first quarter moon

Jan. 30: Mercury at greatest elongation: 25.0°W of sun; Pleiades 2.4°N of moon

Jan. 31: Mars 0.1°N of moon: occultation of Mars by moon

February

Mercury is visible in the SE just before sunrise.

Venus, Mars, and Jupiter are visible in the W in the evening.

Saturn and Neptune are too close to the sun for easy visibility.

Uranus is visible low in the W in the evening.

Feb. 3: Pollux 1.9°N of moon

Feb. 4: Moon at apogee
Feb. 5: Full moon
Feb. 6: Regulus 4.5°S of moon
Feb. 11: Spica 3.6°S of moon
Feb. 12: Moon at descending node
Feb. 13: Last quarter moon
Feb. 14: Antares 1.9°S of moon
Feb. 15: Mercury at aphelion
Feb. 16: Saturn in conjunction with sun
Feb. 18: Mercury 3.6°N of moon
Feb. 19: Moon at perigee
Feb. 20: New moon
Feb. 22: Venus 2.1°N of moon; Jupiter 1.2°N of moon; occultation of Jupiter by moon
Feb. 24: Moon at ascending node
Feb. 26: Pleiades 2.1°N of moon
Feb. 27: First quarter moon
Feb. 28: Mars 1.1°S of moon; occultation of Mars by moon

March

Mercury, **Saturn**, and **Neptune** are too close to the sun for easy visibility.

Venus, **Mars**, **Jupiter**, and **Uranus** are visible in the W after sunset.

Mar. 2: Venus 0.5°N of Jupiter
Mar. 3: Pollux 1.7°N of moon; moon at apogee
Mar. 6: Regulus 4.5°S of moon
Mar. 7: Full moon
Mar. 10: Spica 3.4°S of moon
Mar. 11: Moon at descending node
Mar. 14: Antares 1.6°S of moon
Mar. 15: Last quarter moon; Neptune in conjunction with sun
Mar. 17: Mercury at superior conjunction

Mar. 19: Moon at perigee; Saturn 3.6°N of moon

Mar. 20: Vernal equinox, 21:25 UTC

Mar. 21: New moon

Mar. 22: Jupiter 0.5°N of moon; occultation of Jupiter by moon

Mar. 24: Moon at ascending node; Venus 0.1°N of moon;
occultation of Venus by moon

Mar. 25: Pleiades 1.9°N of moon

Mar. 28: Mars 2.3°S of moon

Mar. 29: First quarter moon

Mar. 30: Pollux 1.6°N of moon

Mar. 31: Moon at apogee; Mercury at perihelion

April

Mercury is visible in the SW just after sunset.

Venus and **Mars** are visible in the W in the early evening.

Jupiter, **Saturn**, **Uranus**, and **Neptune** are too close to the sun for easy visibility.

Apr. 6: Full moon; Spica 3.3°S of moon

Apr. 7: Moon at descending node

Apr. 10: Antares 1.5°S of moon

Apr. 11: Venus 2.5°S of Pleiades; Jupiter in conjunction with sun;
Mercury at greatest elongation: 19.5°E of sun

Apr. 13: Last quarter moon

Apr. 16: Moon at perigee; Saturn 3.5°N of moon

Apr. 17: Venus at perihelion

Apr. 20: New moon; hybrid solar eclipse; moon at ascending node

Apr. 22: Pleiades 1.9°N of moon

Apr. 23: Lyrid meteor shower; Venus 1.3°S of moon

Apr. 26: Mars 3.2°S of moon; Pollux 1.5°N of moon

Apr. 27: First quarter moon

Apr. 28: Moon at apogee

May

Mercury is visible near the end of the month in the E just before sunrise.

Venus and **Mars** are visible in the W in the evening.

Jupiter, **Uranus**, and **Neptune** are too close to the sun for easy visibility.

Saturn is visible in the E just before sunrise.

May 1: Mercury at inferior conjunction

May 4: Spica 3.3° S of moon; moon at descending node

May 5: Eta-Aquarid meteor shower; penumbral lunar eclipse; full moon

May 7: Antares 1.5° S of moon

May 8: Mars 4.9° S of Pollux

May 9: Uranus in conjunction with sun

May 11: Moon at perigee

May 12: Last quarter moon

May 13: Saturn 3.3° N of moon

May 17: Jupiter 0.8° S of moon; occultation of Jupiter by moon; moon at ascending node

May 18: Mercury 3.6° S of moon

May 19: New moon

May 23: Venus 2.2° S of moon

May 24: Pollux 1.6° N of moon; Mars 3.8° S of moon

May 26: Moon at apogee

May 27: First quarter moon

May 29: Mercury at greatest elongation: 24.9° W of sun; Venus 3.9° S of Pollux

May 30: Mars at aphelion

May 31: Spica 3.3° S of moon

June

Mercury is visible in the E just before dawn.

Venus and **Mars** are visible in the W in the evening.

Jupiter, Saturn, and Neptune are visible in the E in the morning sky before dawn.

Uranus is too close to the sun for easy visibility.

June 1: Moon at descending node

June 3: Antares 1.6°S of moon

June 4: Full moon; Venus at greatest elongation: 45.4°E of sun

June 6: Moon at perigee

June 9: Saturn 3.0°N of moon

June 10: Last quarter moon

June 14: Moon at ascending node; Jupiter 1.5°S of moon

June 16: Pleiades 1.8°N of moon; Mercury 4.2°N of Aldebaran;
Mercury 4.3°S of moon

June 18: New moon

June 20: Pollux 1.7°N of moon

June 21: Summer solstice, 14:58 UTC

June 22: Venus 3.7°S of moon; Mars 3.8°S of moon; moon at apogee

June 23: Regulus 4.4°S of moon

June 26: First quarter moon

June 27: Mercury at perihelion; Spica 3.1°S of moon

June 28: Moon at descending node

July

Mercury and Mars are too close to the sun for easy visibility.

Venus is visible in the W in the evening.

Jupiter, Saturn, Uranus, and Neptune are visible in the E before dawn.

July 1: Mercury at superior conjunction; Venus 3.6°N of Mars;
Antares 1.5°S of moon

July 3: Full moon

July 4: Moon at perigee

July 6: Earth at aphelion

July 7: Saturn 2.7°N of moon
July 10: Last quarter moon; Mars 0.6°N of Regulus
July 11: Moon at ascending node; Jupiter 2.2°S of moon
July 13: Pleiades 1.7°N of moon
July 16: Venus 1.7°S of Regulus
July 17: New moon
July 19: Mercury 3.5°S of moon
July 20: Moon at apogee; Regulus 4.2°S of moon
July 21: Mars 3.3°S of moon
July 25: Spica 2.8°S of moon; moon at descending node; first quarter moon
July 28: Delta-Aquarid meteor shower; Antares 1.3°S of moon; Mercury 0.1°S of Regulus

August

Mercury is visible in the W just after sunset.

Venus and **Mars** are too close to the sun to be easily visible.

Jupiter, Saturn, Uranus, and **Neptune** are visible in the E after midnight.

Aug. 1: Full moon

Aug. 2: Moon at perigee

Aug. 3: Saturn 2.5°N of moon

Aug. 7: Moon at ascending node

Aug. 8: Venus at aphelion; Jupiter 2.9°S of moon; last quarter moon

Aug. 9: Pleiades 1.5°N of moon

Aug. 10: Mercury at greatest elongation: 27.4°E of sun; Mercury at aphelion

Aug. 13: Perseid meteor shower; Mercury 4.7°S of Mars; Venus at inferior conjunction; Pollux 1.7°N of moon

Aug. 16: New moon; moon at apogee

Aug. 18: Mars 2.2°S of moon

Aug. 21: Spica 2.6°S of moon; moon at descending node

Aug. 24: First quarter moon
Aug. 25: Antares 1.1°S of moon
Aug. 27: Saturn at opposition
Aug. 30: Moon at perigee; Saturn 2.5°N of moon
Aug. 31: Full moon

September

Mercury is visible in the E just before dawn late in the month.
Venus, **Uranus**, and **Neptune** are visible in the E before sunrise.
Mars is too close to the sun for easy visibility.
Jupiter and **Saturn** are visible all night, rising a few hours after sunset in the E and near the meridian at midnight.

Sept. 3: Moon at ascending node
Sept. 4: Jupiter 3.3°S of moon
Sept. 5: Pleiades 1.2°N of moon
Sept. 6: Mercury at inferior conjunction; last quarter moon
Sept. 10: Pollux 1.5°N of moon
Sept. 12: Moon at apogee
Sept. 13: Regulus 4.1°S of moon
Sept. 15: New moon
Sept. 16: Mars 0.7°S of moon; occultation of Mars by moon
Sept. 17: Spica 2.4°S of moon; moon at descending node
Sept. 19: Neptune at opposition
Sept. 21: Antares 0.9°S of moon
Sept. 22: Mercury at greatest elongation: 17.9°W of sun; first quarter moon
Sept. 23: Autumnal equinox, 06:50 UTC; Mercury at perihelion
Sept. 27: Saturn 2.7°N of moon
Sept. 28: Moon at perigee
Sept. 29: Full moon
Sept. 30: Moon at ascending node

October

Mercury is visible in the E just before sunrise near the beginning of the month.

Venus is visible in the E before sunrise.

Mars is too close to the sun for easy visibility.

Jupiter and **Uranus** are visible most of the night, rising in the E after sunset and near the meridian at midnight.

Saturn and **Neptune** are visible in the S in the evening.

Oct. 2: Jupiter 3.4°S of moon

Oct. 3: Pleiades 1.1°N of moon

Oct. 6: Last quarter moon

Oct. 7: Pollux 1.4°N of moon

Oct. 9: Venus 2.3°S of Regulus

Oct. 10: Moon at apogee; Regulus 4.2°S of moon

Oct. 14: New moon; annular solar eclipse

Oct. 15: Moon at descending node

Oct. 18: Antares 0.9°S of moon

Oct. 20: Mercury at superior conjunction

Oct. 22: Orionid meteor shower; first quarter moon

Oct. 23: Venus at greatest elongation: 46.4°W of sun

Oct. 24: Saturn 2.8°N of moon

Oct. 26: Moon at perigee

Oct. 28: Moon at ascending node; partial lunar eclipse; full moon

Oct. 29: Jupiter 3.1°S of moon

Oct. 30: Pleiades 1.1°N of moon

November

Mercury and **Mars** are too close to the sun for easy visibility.

Venus is visible in the E before sunrise.

Jupiter and **Uranus** are visible most of the night, rising in the E after sunset and near the meridian at midnight.

Saturn and **Neptune** are visible in the S in the evening.

Nov. 3: Jupiter at opposition; Pollux 1.4°N of moon

Nov. 5: Last quarter moon

Nov. 6: S Taurid meteor shower; Regulus 4.2°S of moon; moon at apogee

Nov. 9: Venus 1.0°S of moon; occultation of Venus by moon

Nov. 11: Spica 2.4°S of moon; moon at descending node

Nov. 13: N Taurid meteor shower; new moon; Uranus at opposition

Nov. 14: Antares 0.9°S of moon

Nov. 16: Mercury 2.5°N of Antares

Nov. 18: Mars in conjunction with sun; Leonid meteor shower

Nov. 20: First quarter moon; Saturn 2.7°N of moon

Nov. 21: Moon at perigee

Nov. 24: Moon at ascending node

Nov. 25: Jupiter 2.8°S of moon

Nov. 27: Pleiades 1.1°N of moon; full moon

Nov. 28: Venus at perihelion

Nov. 29: Venus 3.9°N of Spica

December

Mercury is visible in the W just after sunset until early in the month.

Venus is visible in the E before sunrise.

Mars is too close to the sun for easy visibility.

Jupiter, Saturn, and Neptune are visible in the W in the evening.

Uranus is visible most of the night, rising in the E after sunset and near the meridian at midnight.

Dec. 1: Pollux 1.6°N of moon

Dec. 4: Regulus 4.0°S of moon; Mercury at greatest elongation: 21.3°E of sun; moon at apogee

Dec. 5: Last quarter moon

Dec. 8: Spica 2.3°S of moon; moon at descending node

Dec. 9: Venus 3.6°N of moon

Dec. 12: New moon

Dec. 14: Mercury 4.4°N of moon; Geminid meteor shower

Dec. 16: Moon at perigee
Dec. 17: Saturn 2.5°N of moon
Dec. 19: First quarter moon
Dec. 20: Mercury at perihelion
Dec. 21: Moon at ascending node
Dec. 22: Winter solstice, 03:28 UTC; Jupiter 2.6°S of moon;
 Mercury at inferior conjunction
Dec. 23: Ursid meteor shower
Dec. 24: Pleiades 1.1°N of moon
Dec. 27: Full moon
Dec. 28: Pollux 1.7°N of moon
Dec. 31: Regulus 3.8°S of moon

Meteorites and Meteor Showers

When a chunk of material, ice or rock, plunges into Earth's atmosphere and burns up in a fiery display, the event is a **meteor**. While the chunk of material is still in space, it is a **meteoroid**. If a portion of the material survives passage through the atmosphere and reaches the ground, the remnant on the ground is a **meteorite**.

Meteorites found on Earth are classified into types, depending on their composition: **irons**, those composed chiefly of iron, a small percentage of nickel, and traces of other metals such as cobalt; **stones**, stony meteors consisting of silicates; and **stony irons**, containing varying proportions of both iron and stone.

Serious study of meteorites as non-Earth objects began in the 20th century. Scientists use sophisticated chemical analysis, X-rays, and mass spectrography in determining their origin and composition. Although most meteorites are now believed to be fragments of asteroids or comets, geochemical studies have shown that a few Antarctic stones came from the moon or from Mars, presumably ejected by the explosive impact of asteroids.

The largest known meteorite, estimated to weigh about 55 metric tons, is the Hoba meteorite near Grootfontein, Namibia. The Manicouagan impact crater in Quebec, Canada, with an estimated diameter of 60 mi, is one of the largest crater structures still visible on the surface of the Earth. Not obvious to the eye because of erosion, larger impact craters identified include the Vredefort crater in South Africa at 185 mi across and the Sudbury crater in Ontario, Canada (125 mi). The Bedout impact site off the NW coast of Australia gained attention in 2004 when scientists identified further evidence in support of the idea that it may be linked to the Permian

extinction event 250 mil years ago. A 2019 study of the Chicxulub impact crater (93 mi across) in Yucatán Peninsula and the Gulf of Mexico gave evidence of an associated mass extinction event at the end of the Mesozoic Era (66 mil years ago).

Meteor showers vary in strength, but usually the three most visible meteor showers of the year are the **Perseids**, around Aug. 13, the **Orionids**, around Oct. 21, and the **Geminids**, around Dec. 14. These showers feature meteors at the rate of about 60 per hour. Best observing conditions occur in the absence of moonlight, usually when the moon's phase is between waning crescent and waxing quarter.

For most meteor showers the cometary debris is relatively uniformly scattered along the comet's orbit. However, in the case of the **Leonid** meteor shower, which occurs every year around Nov. 17-18, the debris from Comet Temple-Tuttle seems to be bunched up in one stretch. Hence, the meteor shower produced in most years is relatively weak. However, about every 33 years, Earth encounters the bunched-up debris when it crosses the comet's orbit. Sometimes the expected shower is a disappointment, as in 1899 and 1933; at other times, the dense debris provides a spectacular show, as in 1833 and 1866. The Leonids stormed again more recently, producing rates of 1,000-3,000 meteors per hour in 2001.

Morning and Evening "Stars," 2023

(In Coordinated Universal Time, or UTC, the standard time of the prime meridian.)

	Morning	Evening
Jan.	Mercury from Jan. 8	Mercury until Jan. 7 Venus Mars Jupiter Saturn Uranus Neptune
Feb.	Mercury	Venus Mars

	Saturn from Feb. 7	Jupiter Saturn to Feb. 6 Uranus Neptune
Mar.	Mercury until Mar. 17 Saturn	Mercury from Mar. 18 Venus Mars Jupiter Uranus

Largest Telescopes

Astronomers indicate the size of telescopes not by length or magnification but by the diameter of the primary light-gathering component, such as the lens or mirror. The larger the diameter of the mirror or lens, the fainter the objects that can be detected. In principle, larger telescopes also have better resolving power—the ability to discern small details—than smaller telescopes. However, the Earth’s atmosphere limits the details that can be seen using ground-based telescopes. That is why the Hubble Space Telescope, which orbits the Earth outside of its atmosphere, can achieve higher resolutions with its 2.4-m (7.9-ft) mirror than much larger telescopes

on Earth. Adaptive optics systems can compensate for the blurring effects of the Earth's atmosphere, allowing ground-based telescopes to achieve higher levels of detail. Telescopes to detect ultraviolet, X-ray, and gamma radiation must be placed in space or high-altitude balloons because the atmosphere absorbs most of these types of radiation; as a result, such telescopes are generally much smaller than optical, infrared, and radio telescopes.

Refracting (lens) telescopes are currently not made with lens diameters of more than 40 in. Because **reflecting telescopes** can be made less expensively and with more precision than refracting telescopes, all modern large optical telescopes are made with mirrors. **Radio telescopes** are larger than optical telescopes because larger diameters are required to obtain equivalent resolution of radio's longer wavelengths. A technique called interferometry, originally developed for radio telescopes, uses arrays of telescopes to achieve better resolution.

Largest refracting (lens) optical telescope: Yerkes Observatory, 1 m (40 in.), at Williams Bay, WI

Largest reflecting (mirror) optical/infrared telescope: Gran Telescopio Canarias, 10.4 m (34 ft), on La Palma, Canary Islands (segmented mirror)

Largest infrared interferometer: Four 8.2-m (27-ft) telescopes of the Very Large Telescope Interferometer (VLT) with a 200-m (656-ft) baseline on Cerro Paranal in Chile

Largest fully steerable radio dish: Robert Byrd Green Bank Telescope (GBT), 100 m (328 ft), in Green Bank, WV

Largest single radio dish: Five-hundred-meter Aperture Spherical Telescope (FAST), 500 m (1,640 ft), in Guizhou, China

Largest baseline radio interferometer: 10 25-m (82-ft) diameter telescopes of the Very Long Baseline Array (VLBA), dispersed from Hawaii to the Virgin Islands with a resolution equal to a radio dish of 8,600 km (5,000 mi), making it the highest resolution telescope in the solar system

Largest submillimeter interferometer: 54 12-m (39-ft) and 12 7-m (23-ft) antennas of the Atacama Large Millimeter Array (ALMA), located at a site above 5,000 m (16,400 ft) in the Atacama Desert in

Chile. The antennas can be spread out over a 16-km (10-mi) distance to increase the resolving power of the array.

Largest airborne telescope: Stratospheric Observatory for Infrared Astronomy (SOFIA), 2.5-m (8.2-ft) infrared telescope aboard a NASA 747

Largest space telescope: The James Webb Space Telescope (JWST), 6.5-m (21-ft) infrared reflecting telescope was successfully launched by NASA on Dec. 25, 2021, and began observations at the sun-earth L₂ point, in 2022.

Constellations

Culturally, constellations are imagined patterns among the stars that, in some cases, have been recognized through millennia. Knowledge of constellations was once necessary in order to function as an astronomer. For today's astronomers, constellations are simply areas of the sky in which objects await observation and interpretation.

Because Western culture has dominated much of modern scientific discourse, constellations and celestial traditions of other cultures are not widely known outside their regions of origin. Even the patterns with which we are most familiar today have undergone considerable change over the centuries.

Today, **88 constellations** are officially recognized. Although many have ancient origins, some are modern, devised out of unclaimed stars by astronomers a few centuries ago. Unclaimed stars were those too faint or inconveniently placed to be included in the more prominent constellations. Stars in a constellation are not necessarily near each other; they are just located in the same direction on the celestial sphere.

Common names of stars often referred to parts of the traditional figures they represented, such as Deneb, the tail of the swan, and Betelgeuse, the giant's shoulder. Astronomers may avoid traditional names by labeling stars with Greek letters, generally to denote order of brightness. The "alpha star" would typically be the brightest in a constellation. The "of" implies possession, so the genitive (possessive) form of the constellation name is used, e.g. Alpha

Orionis (the first star of Orion) for Betelgeuse. (While Rigel is brighter than Betelgeuse, its designation is Beta Orionis, possibly because Betelgeuse appeared brighter when they were named.)

Asterisms are widely recognized patterns of stars. The so-called Big Dipper is a small part of the constellation Ursa Major, the big bear; the three stars of the Summer Triangle are each in a different constellation, with Vega in Lyra the lyre, Deneb in Cygnus the swan, and Altair in Aquila the eagle. The northeast star of the asterism Great Square of Pegasus is Alpha Andromedae.

Name	Abbr.	Meaning
Andromeda	And	Chained Maiden
Antlia	Ant	Air Pump
Apus	Aps	Bird of Paradise
Aquarius	Aqr	Water Bearer
Aquila	Aql	Eagle
Ara	Ara	Altar
Aries	Ari	Ram
Auriga	Aur	Charioteer
Boötes	Boo	Herder
Caelum	Cae	Chisel
Camelopardalis	Cam	Giraffe
Cancer	Cnc	Crab
Canes Venatici	CVn	Hunting Dogs
Canis Major	CMA	Greater Dog
Canis Minor	CMi	Little Dog
Capricornus	Cap	Sea-Goat
Carina	Car	Keel
Cassiopeia	Cas	Queen
Centaurus	Cen	Centaur
Cepheus	Cep	King
Cetus	Cet	Whale
Chamaeleon	Cha	Chameleon
Circinus	Cir	Compass (drawing)
Columba	Col	Dove
Coma Berenices	Com	Berenice's Hair
Corona Australis	CrA	Southern Crown

Corona Borealis	CrB	Northern Crown
Corvus	Crv	Crow
Crater	Crt	Cup
Crux	Cru	Cross (southern)
Cygnus	Cyg	Swan
Delphinus	Del	Dolphin
Dorado	Dor	Dolphinfish
Draco	Dra	Dragon
Equuleus	Equ	Little Horse
Eridanus	Eri	River
Fornax	For	Furnace
Gemini	Gem	Twins
Grus	Gru	Crane (bird)
Hercules	Her	Hercules
Horologium	Hor	Clock
Hydra	Hya	Water Snake (female)
Hydrus	Hyi	Water Snake (male)
Indus	Ind	Indian
Lacerta	Lac	Lizard
Leo	Leo	Lion
Leo Minor	LMi	Littler Lion
Lepus	Lep	Hare
Libra	Lib	Balance
Lupus	Lup	Wolf
Lynx	Lyn	Lynx
Lyra	Lyr	Lyre
Mensa	Men	Table Mountain
Microscopium	Mic	Microscope
Monoceros	Mon	Unicorn
Musca	Mus	Fly
Norma	Nor	Square (rule)
Octans	Oct	Octant
Ophiuchus	Oph	Serpent Bearer
Orion	Ori	Hunter
Pavo	Pav	Peacock
Pegasus	Peg	Flying Horse
Perseus	Per	Hero

Phoenix	Phe	Phoenix
Pictor	Pic	Painter
Pisces	Psc	Fishes
Piscis Austrinus	PsA	Southern Fish

Eclipses, 2023

(In Coordinated Universal Time, or UTC, the standard time of the prime meridian.)

There will be four eclipses in 2023: one hybrid solar eclipse, one annular solar eclipse, one penumbral lunar eclipse, and one partial lunar eclipse. The most prominent and accessible solar eclipse, the annular solar eclipse of Oct. 14, will be visible in a region stretching from the NW coast of North America, through Central America and Colombia, to the E coast of Brazil. The other solar eclipse, the hybrid eclipse of Apr. 20, is visible from the S Indian Ocean, Australia, New

Guinea, Indonesia, and parts of the W Pacific; it will be total over the central parts of its track and annular at the beginning and end (near sunrise and sunset). The penumbral lunar eclipse of May 5 will be visible over much of Europe, Asia, Africa, Australia, and Antarctica. The partial lunar eclipse of Oct. 28 will be visible over much of the same region, plus most of the Atlantic Ocean and the NE coast of North and South America.

The tables below give the times in UTC of when the moon or sun will reach certain phases of each event. In the case of the lunar eclipses, the times are relevant for any observer who can see the moon. In the case of solar eclipses, the tabulated times refer to when the given event begins or ends from specific points along the eclipse path; as the moon's shadow sweeps quickly across the Earth, the observed duration and degree of eclipse depends on the observer's precise location. Interactive maps are available on the internet to calculate times for specific locations.

I. Hybrid Eclipse of the Sun: Apr. 20

This eclipse will be visible to observers in the S Indian Ocean, Australia, New Guinea, Indonesia, and parts of the W Pacific. It is a particularly rare type of eclipse that begins as an annular eclipse, at sunrise, where a ring of the sun's surface is visible around the moon, climaxes further along its path as a total eclipse, when the sun is completely blocked, and ends again as an annular eclipse near sunset. The track of the eclipse, which is very narrow (around 30 mi at most), is mostly over water. Totality at maximum will be only 1 min., 16 sec. Times are for the midpoint of the eclipse path, just south of Timor-Leste.

Event	Date	Hr.	Min.
Partial eclipse begins	Apr. 20	2	41.8
Total eclipse begins	Apr. 20	4	16.1
Greatest eclipse	Apr. 20	4	16.7
Total eclipse ends	Apr. 20	4	17.4
Partial eclipse ends	Apr. 20	5	52.1

II. Penumbral Eclipse of the Moon: May 5

This eclipse, with the moon passing completely south of the center of Earth's umbra, will produce a barely noticeable darkening of the moon. It will be visible from sites in most of Africa, Europe, Asia, Australia, and the western Pacific Ocean.

Event	Date	Hr.	Min.
Penumbral eclipse begins	May 5	15	14
Greatest eclipse	May 5	17	24
Penumbral eclipse ends	May 5	19	31

III. Annular Eclipse of the Sun: Oct. 14

This eclipse will be visible to observers across the NW coast of North America, through Central America and Colombia, to the E coast of Brazil. Because the moon will be farther from Earth than it is during a total eclipse, at most only 95% of the sun's surface will be blocked. As a result, observers along the eclipse path will see a "ring of fire," the photosphere, surrounding the dark disk of the moon. Times are for the midpoint of the eclipse in the Caribbean just E of Bluefields, Nicaragua, where the annular eclipse lasts for 5 min., 17 sec.

Event	Date	Hr.	Min.
Partial eclipse begins	Oct. 14	16	13.8
Annular eclipse begins	Oct. 14	17	56.9
Greatest eclipse	Oct. 14	17	59.5
Annular eclipse ends	Oct. 14	18	02.2
Partial eclipse ends	Oct. 14	19	44.8

IV. Partial Eclipse of the Moon: Oct. 28

This eclipse of the moon, with the moon partly entering Earth's umbra, will be visible over much of the same region as the May 5 penumbral lunar eclipse, i.e., from sites in E North America; the coast of Brazil; all of Europe, Asia, and Africa; and W Australia; plus most of the Atlantic and Indian oceans. Only the S edge of the moon will enter Earth's umbra, producing a noticeable darkening.

Event	Date	Hr.	Min.
Penumbral eclipse begins	Oct. 28	18	02
Partial eclipse begins	Oct. 28	19	35
Greatest eclipse	Oct. 28	20	14
Partial eclipse ends	Oct. 28	20	53
Penumbral eclipse ends	Oct. 28	22	26

Total Solar Eclipses, 2022-44

Total solar eclipses actually take place nearly as often as total lunar eclipses. Total lunar eclipses are visible over at least half of the Earth, while total solar eclipses can be seen only along a very narrow path up to a few hundred miles wide and a few thousand miles long. Observing a total solar eclipse is thus a rarity for most people, though the experience is so memorable that many enthusiasts travel long distances just to see totality.

Solar eclipses can be dangerous to observe. This is not because the sun emits more potent rays, but because the sun is always dangerous to observe directly, and people are particularly likely to stare at it during a solar eclipse.

Date	Duration¹		Width (mi)	Path of totality
	min.	sec.		
2024, Apr. 8	4	27	123	Mexico, U.S., E Canada
2026, Aug. 12	2	18	183	Greenland, Iceland, Spain

Total Solar Eclipses in the U.S. in the 21st Century

During the 21st century, there are eight total solar eclipses visible somewhere in the continental U.S. The first came after a long gap, in 2017. The last total solar eclipse before that had been on Feb. 26, 1979, in the northwestern U.S.

Date	Path of totality
Aug. 21, 2017	Oregon to South Carolina
Apr. 8, 2024	Mexico to Texas and N through Maine
Aug. 23, 2044	Montana to North Dakota
Aug. 12, 2045	Northern California to Florida
Mar. 30, 2052	Florida to Georgia
May 11, 2078	Louisiana to North Carolina
May 1, 2079	New Jersey to the lower edge of New England
Sept. 14, 2099	North Dakota to Virginia

Beginnings of the Universe

One of the dominating astronomical discoveries of the 20th century was that the galaxies of the universe all seem to be moving away from Earth. Doppler redshifts were observed for spiral nebulae around 1920 even though they were not yet known to be galaxies. By the early 1930s, Edwin Hubble and M. L. Humason had established that the more distant a galaxy, the faster it was receding. It turned out that they were moving away not just from the Earth but from one another—that is, the **universe is expanding**. Scientists conclude that the universe must once, very long ago, have been extremely compact and dense, and a rapid expansion caused the energy and matter to rapidly expand. The beginning of this expansion is referred to as the **Big Bang**.

On the subatomic level, according to this theory, there were vast changes of energy and matter and the way physical laws operated during the first few minutes after the Big Bang. After those early minutes the percentages of the basic matter of the universe—hydrogen, helium, and lithium—were set. Everything was so compact and hot that radiation dominated the early universe and there were no stable, un-ionized atoms. The universe was opaque, in the sense that any energy emitted was quickly absorbed and then re-emitted. As the universe expanded, density and temperature continued to drop. A few hundred thousand years after the Big Bang, the temperature dropped far enough that electrons and nuclei could combine to form stable atoms as the universe became transparent. Once that occurred, the radiation that had been trapped was free to escape.

In the 1940s, George Gamow and others predicted that remnants of this escaped radiation should be observable. They had started to search for this background radiation when physicists Arno Penzias and Robert Wilson, using a radio telescope, inadvertently found it, for which they won the 1978 Nobel Prize in Physics.

In 2003, NASA's Wilkinson Microwave Anisotropy Probe made measurements of the temperature of this **cosmic microwave background radiation** to within millionths of a degree. From these

measurements, scientists were able to deduce that our universe is 13.7 billion years old and that first-generation stars began to form a mere 200 mil years after the Big Bang.

In 2014, scientists operating a telescope in Antarctica claimed to have found direct evidence for cosmic inflation, the rapid expansion of the universe during the 10⁻³² sec. after the Big Bang that helps explain why variations of the cosmic background radiation are so small. Follow-up observations cast doubt on this, and higher precision measurements are planned.

A related mystery is evidence suggesting hidden matter and hidden energy that cannot be directly observed. The presence of dark matter is indicated by the rotation curves of galaxies and the dynamics of clusters of galaxies. **Dark matter** may be composed of gas; large numbers of cool, compact objects like dead stars; or even subatomic particles. Evidence for **dark energy** is derived from studies of distant Type Ia supernovae indicating that the expansion of the universe is accelerating rather than slowing. Dark energy seems to work on the very fabric of the universe, acting as a force that increases the rate at which space expands. Visible matter seems to constitute only about 4% of the total mass of the universe while the rest of the universe's mass is in the form of dark matter (27%) and dark energy (68%).

Galaxies

By the 20th century, more than 10,000 **nebulae**—cloud-like luminous objects in the sky—had been discovered. Some were correctly identified as star clusters and others as clouds of gas and dust. Those nebulae which were spiral or elliptical in shape were found in regions of the sky far from the glowing band that is our own Milky Way galaxy. Philosopher Immanuel Kant had written in 1775 that some of these fuzzy objects might be “**island universes**” apart from our own. But the idea remained speculative until 1923-24, when Edwin Hubble discovered variable stars—stars whose varying brightness makes their distance from Earth calculable—in some of these nebulae. This provided conclusive evidence that these

systems were far enough away to be outside our own island universe, the Milky Way galaxy.

Galaxies range in size from small dwarf elliptical ones, with perhaps 1 million stars, to spiral galaxies containing 300 billion stars, to giant elliptical galaxies that may be home to more than 10 trillion stars. The diameters of galaxies range from 3,000 light-years in dwarf elliptical galaxies to over 500,000 light-years in giant elliptical galaxies. It is estimated that the Milky Way galaxy is about 100,000 light-years in diameter with about 400 billion stars.

Galaxies also congregate into **clusters**. The smallest are poor clusters of only a few dozen galaxies, while the largest rich clusters may contain thousands. The Milky Way is part of a poor cluster of about three dozen galaxies called the **Local Group**. The largest galaxy of the Local Group is Andromeda, a spiral galaxy visible to the unaided eye in the constellation of Andromeda on a very dark night. The Milky Way is the second largest galaxy in this group; most of the others are small.

The Solar System

The major planets of the solar system, in order of mean distance from the sun, are **Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune**. The dwarf planets in order of average distance from the sun are **Ceres** (located between Mars and Jupiter), **Pluto, Haumea, Makemake, 2007 OR10, and Eris**. All planets orbit counterclockwise around the sun as viewed from above the Earth's North Pole.

Because Mercury and Venus are nearer to the sun than is Earth, their motions about the sun appear from Earth as wide swings first to one side of the sun then to the other, though both planets move around the sun in almost circular orbits. When their passage takes them between Earth and the sun or beyond the sun in relation to Earth, they cannot be seen.

The planets that lie farther from the sun than does Earth may be seen for longer periods. They are invisible only when so located in the sky that they rise and set at about the same time as the sun and are thus overwhelmed by the sun's light.

Mercury and Venus, because they are between Earth and the sun, show phases much as the moon does. The planets farther from the sun are always seen as full, although Mars does occasionally present a slightly gibbous phase, like the moon when it is not quite full.

The planets appear to move rapidly among the stars because they are relatively closer to Earth. The stars are also in motion, some at tremendous speeds, but they are so far away that their motion does not change their apparent positions in the heavens enough to be perceived. The nearest star is about 9,000 times farther away than Neptune. The count for identified **moons** in the solar system orbiting planets and dwarf planets stood at 214 as of mid-2020. Several dwarf planet candidates are also known to have moons.

Planet Superlatives	
Largest, most massive planet	Jupiter
Fastest orbiting planet	Mercury
Fastest sidereal rotation	Jupiter
Longest (synodic) day	Mercury
Rotational pole closest to ecliptic	Uranus
Most moons	Saturn
Planet with largest moon	Jupiter
Greatest average density	Earth
Tallest mountain	Mars
Strongest magnetic fields	Jupiter
Most circular orbit	Venus
Smallest, least massive planet	Mercury
Slowest orbiting planet	Neptune
Slowest sidereal rotation	Venus
Shortest (synodic) day	Jupiter
Hottest planet	Venus
No moons	Mercury, Venus
Planet with moon with most eccentric orbit	Neptune
Lowest average density	Saturn
Deepest oceans	Jupiter
Greatest amount of liquid water on surface	Earth

Selected Characteristics of the Sun and Planets

Object	at unit distance¹"	Radius—at mean least distance²"	in mi mean radius

R = Retrograde rotation. (1) Angular radius, in seconds of arc, if object were seen at a distance of 1 astronomical unit. (2) Angular radius, in seconds of arc, when object is closest to Earth. (3) Earth = 1. (4) A value of 1 would indicate a perfect reflector.

Planets of the Solar System

The International Astronomical Union (IAU) on Aug. 24, 2006, at their General Assembly in Prague, Czech Republic, agreed on a new definition for planet, and in the process effectively removed Pluto's planet status. The ruling came after years of debate as to whether Pluto, discovered in 1930, should still be considered the ninth planet in our solar system because of its size, orbit, and other characteristics. New discoveries of other Pluto-like objects in the solar system, such as the 2003 discovery of Eris, a **Kuiper Belt object** (KBO) comparable in size to Pluto, also contributed to the debate.

Under the IAU's new definition, Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune are regarded as "classical" planets. A **planet** is now defined as a celestial body that (a) is in orbit around the sun, (b) has sufficient mass for its self-gravity to

overcome rigid body forces so that it assumes a hydrostatic equilibrium (nearly round) shape, and (c) has cleared the neighborhood around its orbit.

Pluto, Eris, Ceres, Makemake, 2007 OR10, and Haumea are regarded as dwarf planets, with the status of Pluto's largest moon, Charon, still to be determined. A **dwarf planet** is a celestial body that (a) is in orbit around the sun, (b) has sufficient mass for its self-gravity to overcome rigid body forces so that it assumes a hydrostatic equilibrium (nearly round) shape, (c) has not cleared the neighborhood around its orbit, and (d) is not a satellite.

The IAU also created a new category, **small solar system bodies**, for all other objects orbiting the sun, including comets, asteroids, KBOs, and other small objects. It has not yet established a process by which other solar system objects will be classified.

Note: **AU** = astronomical unit (92.96 mil mi, mean distance of Earth from the sun); **d.** = 1 Earth synodic (solar) day (24 hours); **synodic day** = rotation period of a planet measured with respect to the sun (the "true" day, i.e., the time from midday to midday, or from sunrise to sunrise); **sidereal day** = rotation period of a planet with respect to the stars.

Mercury

Distance from the sun	
Perihelion	28.6 mil mi
Semi-major axis (mean distance)	36 mil mi (0.387 AU)
Aphelion	43.4 mil mi
Period of revolution around sun	87.97 d.
Orbital eccentricity	0.2056
Orbital inclination	7.00°
Synodic day (midday to midday)	175.94 d.
Sidereal day	58.65 d.
Rotational inclination	0.01°
Mass (Earth = 1)	0.0553
Mean radius	1,516 mi
Mean density (Earth = 1)	0.984
Natural satellites	0

Mercury, named for the Roman gods' messenger, is the closest planet to the sun and the smallest planet in the solar system. Mercury orbits so close to the sun that it can never be observed against a dark sky; it is always seen during morning or evening twilights. In 2008, the *Messenger* spacecraft made the first flybys of Mercury since the 1970s. *Messenger* went into orbit about Mercury in Mar. 2011 for a reconnaissance mission; the original one-year science program was extended in 2012. The goals of the mission included mapping, imaging, and measuring the surface composition of Mercury, as well as probing the planet's interior structure and interactions with the sun. Among the discoveries were that at least part of Mercury's metallic core is liquid, that there may be water ice in shadowed craters near the poles, and that the planet's magnetic field is offset from the planet's center.

Orbit and rotation. Mercury moves with great speed around the sun, averaging about 30 mi per second to complete its orbit, which takes about 88 Earth days. Mercury takes nearly 59 days to rotate on its axis. Because its orbital period is only about 50% longer than its sidereal rotation, the time from one sunrise to the next on Mercury is about 176 days—twice as long as a Mercurial year. Oddly, Mercury has a magnetic field, albeit a very weak one. It has been held that both a fluid core and rapid rotation—neither of which Mercury was believed to have—are necessary for the generation of a planetary magnetic field. Mercury may demonstrate the contrary.

Atmosphere. Mercury's atmosphere is almost nonexistent. What very little it has is composed of 42% oxygen, 29% sodium, 22% hydrogen, 6% helium, 0.5% potassium, and 0.5% other particles. Because of Mercury's lack of atmosphere, the surface during the day may reach a temperature of about 845°F, while the temperature at night may fall as low as −300°F. Earth-based observation has provided evidence of water ice near the poles.

Surface and composition. Mercury's surface is rocky and cratered similar to that of the Earth's moon. The most imposing feature on Mercury, the Caloris Basin, is a huge impact crater more

than 800 mi in diameter. Mercury has a huge iron core that extends out to about 75% of the planet's radius; it has a higher percentage of iron than any other planet in the solar system.

Venus

Distance from the sun	
Perihelion	66.8 mil mi
Semi-major axis (mean distance)	67.2 mil mi (0.723 AU)
Aphelion	67.7 mil mi
Period of revolution around sun	224.7 d.
Orbital eccentricity	0.0067
Orbital inclination	3.39°
Synodic day (midday to midday)	116.75 d. (retrograde)
Sidereal day	243.02 d. (retrograde)
Rotational inclination	177.4°
Mass (Earth = 1)	0.815
Mean radius	3,760 mi
Mean density (Earth = 1)	0.951
Natural satellites	0
Average surface temperature	867°F

Venus, named for the Roman goddess of love, is the second planet out from the sun. Because Venus is almost the same size as Earth, it is believed that the two planets were formed at the same time by the same general process and from the same mixture of chemical elements. Venus can easily be seen from Earth with the naked eye; it is the third-brightest object in the sky, exceeded only by the sun and the moon.

Orbit and rotation. It takes Venus 225 Earth days to complete its orbit around the sun. Its synodic revolution—the amount of time it takes for Venus to return to the same position relative to Earth and the sun, which is a result of the combination of its own motion with that of Earth—is 584 days. Because of this, every 19 months Venus is closer to Earth than to any other planet. The rotation period of Venus appears to be 243 days clockwise. In other words, its rotation is counter to the rotation of the other planets and counter to its own motion around the sun. This rate and sense of rotation make for a

solar day (sunrise to sunrise) on Venus of 116.8 Earth days. Night lasts 58 days, and day lasts 58 days. Venus has no detectable magnetic field.

Atmosphere. The Venusian atmosphere is very thick and toxic. It is composed primarily of 96.5% carbon dioxide, 3.5% nitrogen, and trace concentrations of sulfur dioxide, argon, water, carbon monoxide, helium, and neon. In addition, it exerts an atmospheric pressure at the surface more than 90 times Earth's normal sea-level pressure. The planet is covered with a dense, white, cloudy atmosphere that conceals whatever is below. These clouds are believed to contain sulfuric acid, meaning that it rains sulfuric acid on Venus. Due to the thickness of the atmosphere and resulting extreme greenhouse effect, the temperature is essentially the same day and night; the planet has an average surface temperature of about 867°F, making it the hottest planet in the solar system. Winds of about 200 mph in the clouds may account for the consistency in temperature despite the low rotation speed of the planet. However, at the surface, the winds are very slow.

Surface and composition. Radar-produced maps of the planet show large craters, continent-sized highlands, and extensive dry lowlands. No tectonic activity has been found similar to Earth's moving tectonic plates, but a system of global rift zones and numerous broad, low, dome-like structures, called coronae, may have been produced by the upwelling and subsidence of magma from the mantle. Volcanic surface features, such as vast lava plains, fields of small lava domes, and large shield volcanoes, are common. About 1,600 volcanoes and volcanic features appear on the Venusian surface; more than 85% of the surface is covered by volcanic flows. Theia Mons, a huge shield volcano, has a diameter of over 600 mi and a height of over 3.5 mi. (The largest Hawaiian volcano is only about 125 mi in diameter but rises nearly 5.5 mi from the ocean floor.) In recent years, evidence of continuous volcanic activity has been noted by astronomers. Aside from volcanoes, there are highly deformed mountain belts across Venus along with a few meteor-impact craters more than 20 mi wide. Erosion is a very slow process on Venus due to the lack of water. There are indications of

some wind movement of dust and sand. The few impact craters on Venus suggest that the surface is generally geologically young—less than 800 mil years old. Despite the fact that probes have landed on Venus, there are very few pictures from the surface because the probes couldn't withstand the high temperature and atmospheric pressure for more than a few hours.

Mars

Distance from the Sun		
Perihelion		128.4 mil mi
Semi-major axis (mean distance)		141.6 mil mi (1.524 AU)
Aphelion		154.9 mil mi
Period of revolution around Sun		686.98 d. (1.88 yr.)
Orbital eccentricity		0.0935
Orbital inclination		1.85°
Synodic day (midday to midday)		24 hr., 39 min., 35 sec.
Sidereal day		24 hr., 37 min., 22 sec.
Rotational inclination		25.19°
Mass (Earth = 1)		0.107
Mean radius		2,106 mi
Mean density (Earth = 1)		0.713
Natural satellites		2
Average surface temperature		−81°F

Named for the Roman god of war, the Red Planet has some features much like Earth. Mars has climate, seasons, volcanoes, and possibly once had liquid water flowing across its surface. Mars can easily be seen with the naked eye on most clear nights, which is why it was one of the first planets to be studied by ancient astronomers. Later, when telescopes came into use, many observers claimed that canals made by Martians existed on the planet's surface, which led to speculation as to whether there was intelligent life there. Unmanned probes have since put all those theories to rest; the canals turned out to be topographic patterns and dust storms.

Mars is currently being explored by a number of robotic craft, both on the surface and in orbit. The *Curiosity*/Mars Science Laboratory, an SUV-sized robot, landed on the surface in Aug. 2012.

Its mission was to understand the history of the Martian geology and climate, search for the presence of organic matter, and assess the planet's past suitability for life. An Indian orbiter is currently using remote sensing to study the Martian surface and atmosphere, while NASA's *MAVEN* spacecraft is studying the upper atmosphere of Mars and its interaction with the solar wind. The European Space Agency *Trace Gas Orbiter* (TGO) began orbiting Mars in Oct. 2016. NASA's *InSight* mission, which landed in 2018, was relaying seismic data that is being used to map the interior of Mars. In 2020, three spacecraft were launched to the red planet, all arriving successfully in 2021: NASA's *Perseverance* lander, equipped with a helicopter named *Ingenuity*, and Mars missions by China and by the United Arab Emirates.

Orbit and rotation. Although Mars's orbital path is nearly circular, it is somewhat more eccentric than that of most other planets. Mars is more than 26 mil mi farther from the sun at its most distant point compared to its closest approach. Its orbit and speed in relation to Earth's bring it fairly close to Earth, at opposition, about every two years. Mars was at opposition on Dec. 8, 2022, and will be close again on Jan. 16, 2025. Every 15-17 years the close approaches are especially favorable for observation. The July 27, 2018, opposition was the last one that was particularly close, and the next such favorable opposition occurs on Sept. 15, 2035.

Mars rotates in 24 hr. and 37 min., almost the same period of time as Earth. Mars's mean distance from the sun is 142 mil mi. Because Mars's axis of rotation is inclined by about 25° from the vertical to the plane of its solar orbit about the sun, the planet has seasons.

Unlike Earth's global magnetic field, the Martian magnetic field is small, weak, and localized and may be the remnant of a stronger field from the planet's past.

Atmosphere. The Martian atmosphere is composed primarily of 95.32% carbon dioxide, 2.7% nitrogen, 1.6% argon, 0.13% oxygen, 0.08% carbon monoxide, and, in very minor quantities, water, hydrogen oxide, and neon. The atmosphere on Mars is very thin. It has an atmospheric pressure between 1% and 2% of Earth's (if

Earth's atmosphere were that thin, there would not be enough oxygen to breathe). Because the Martian atmosphere is so thin and because of the planet's weak magnetic field, its surface is bombarded by cosmic radiation about 100 times as intense as on Earth.

Martian weather systems consist mainly of huge dust storms. On the poles, white caps (believed to be both water ice and carbon dioxide ice) grow in winter and shrink in summer. It is mainly the carbon dioxide that comes and goes with the seasons. The water ice is apparently in many layers with dust between them, indicating climatic cycles.

Surface and composition. Mars is an alien world with rust-red sand and pink skies. In the planet's beginning stages when it was much hotter, Mars's surface melted to a sufficient extent to separate into dense and lighter layers. Mars later cooled enough to allow liquid water to possibly flow across its surface. NASA scientists announced in Sept. 2015 the most convincing evidence to date that liquid water flows on the present-day Martian surface. Using imaging and spectroscopy instruments on the Mars Reconnaissance Orbiter, they showed that seasonal flows on Martian slopes contain hydrated minerals that can only form in the presence of liquid water.

Natural satellites. Mars has two small satellites called Phobos and Deimos, each discovered in 1877 by American astronomer Asaph Hall. (Phobos measures about 11 by 17 mi and Deimos about 7 by 9 mi.) Deimos, the outer satellite, revolves around the planet in about 31 hours. Phobos, the inner satellite, whips around Mars in a little more than 7 hours, making three orbits each Martian day. Since it orbits Mars faster than the planet rotates, Phobos rises in the west and sets in the east, opposite to what other bodies appear to do in the Martian sky. Both moons are irregularly shaped and pitted with numerous craters. Their origins are not known; however, some astronomers consider them to be asteroid-like objects that were captured by Mars very early in its history.

Jupiter

Distance from the Sun

Perihelion	460.1 mil mi
Semi-major axis (mean distance)	483.8 mil mi (5.204 AU)
Aphelion	507.4 mil mi
Period of revolution around Sun	11.862 yr.
Orbital eccentricity	0.0489
Orbital inclination	1.304°
Synodic day (midday to midday)	9 hr., 55 min., 33 sec.
Sidereal day	9 hr., 55 min., 30 sec.
Rotational inclination	3.13°
Mass (Earth = 1)	317.8
Mean radius	43,441 mi
Mean density (Earth = 1)	0.24
Natural satellites	80
Average temperature*	−162°F
*i.e., temperature where atmospheric pressure equals 1 Earth atmosphere.	

Jupiter, named for the Roman ruler of the gods, is the largest planet in the solar system (11 times the diameter of Earth). Its mass is more than twice the mass of all the other planets, moons, and asteroids put together. Visible to the naked eye and known to the ancients, it was a focus of the Italian scientist Galileo Galilei, who viewed the planet and its four largest moons through a homemade telescope.

Orbit and rotation. Jupiter is at an average distance of 484 mil mi from the sun and takes almost 12 Earth years to make a complete revolution. The largest of the planets, Jupiter has an equatorial diameter of 88,846 mi; its polar diameter is more than 5,700 mi shorter. This noticeable oblateness is a result of the liquidity of the planet and its extremely rapid rotation rate—a Jupiter day is less than 10 Earth hours long. A point on Jupiter’s equator moves at a speed of 22,000 mph, as compared with 1,000 mph for a point on Earth’s equator. Jupiter’s magnetic field is by far the strongest of any planet. Electrical activity caused by this field is so strong that it discharges trillions of watts into Jupiter’s environment daily. In July 2016, NASA’s *Juno* spacecraft entered orbit around the planet to begin a study of Jupiter’s composition, magnetic field, and auroras, including close-up views of the poles of the planet. In 2021, it began

sending back images of Jupiter's satellites as well as the planet itself. Originally planned for one-year operation, in 2021 the mission was extended until Sept. 2025 or until the spacecraft ceases to function.

Atmosphere. Jupiter's atmosphere is primarily composed of 90% molecular hydrogen and 10% helium. Minor constituents include methane, ammonia, hydrogen deuteride, ethane, and water. Jupiter has a turbulent atmosphere characterized by thick clouds, high winds, and huge lightning storms many times larger than those on Earth. The atmospheric temperature varies, but the temperature at the tops of clouds may be about -280°F . The Great Red Spot seen prominently on Jupiter is a huge hurricane-like storm that is three times the diameter of Earth. In 2006, the Hubble Space Telescope detected the appearance of a second, smaller red spot.

Surface and composition. Gas giant planets like Jupiter, Saturn, and Neptune do not have a surface like Earth or any of the other rocky planets. The gases become denser with depth, until they may turn into a slush or slurry. Jupiter has a liquid hydrogen ocean more than 35,000 mi deep. It likely has a rocky core about the size of Earth, but 13 times more massive. There is no sharp interface between the gaseous atmosphere and the hydrogen ocean that accounts for most of Jupiter's volume. At lower depths, under enormous pressure, the liquid hydrogen takes on the properties of a metal. It is likely that this liquid metallic hydrogen is the source for both Jupiter's persistent radio noise and for its improbably strong magnetic field.

Natural satellites. Jupiter has 80 known satellites, the latest discovered in 2021. Four of the moons (in order of distance from Jupiter), Io, Europa, Ganymede, and Callisto—all discovered by Galileo in 1610—are large and bright and are close in diameter to Earth's moon and Mercury. Because they move so rapidly around Jupiter, their change in position from night to night can be seen from Earth using binoculars.

Io is one of the most volcanically active bodies in the solar system. A gaseous, doughnut-shaped ring, or torus, enveloping Io's orbit around Jupiter may have been formed by material ejected from

Io's active volcanoes. (This is not to be confused with Jupiter's rings.) These volcanoes, hotter than Earth's volcanoes, erupt mainly molten sulfur and result in a constantly changing surface appearance.

Europa may have a 30-mi-deep salty, liquid ocean beneath its icy crust, perhaps a small metallic core, and a very tenuous atmosphere. Ganymede is the biggest moon in the solar system. With a diameter of 3,120 mi, it is bigger than both Mercury and Pluto. Ganymede also has its own magnetic field produced by a molten core of perhaps iron sulfide. Callisto has the oldest, most heavily cratered surface in the solar system, a very thin atmosphere of carbon dioxide, and possibly a subsurface liquid ocean.

The other known satellites are much smaller, with four closer to Jupiter than Io, five between Ganymede and Callisto, and the rest farther out. Most of Jupiter's moons orbit the planet at high inclinations from the equator, unlike the innermost satellites. These moons may be captured asteroids.

Rings. Jupiter has a diffuse, dark set of rings that were discovered by the *Voyager 1* spacecraft and cannot be seen from Earth without powerful telescopes. They are composed of small dust grains blasted off the four innermost moons by meteoroid impacts.

Saturn

Saturn, named for the Roman ruler of the Titans, is the sixth planet from the sun and most distant of the planets visible to the unaided eye. Saturn is second in size to Jupiter, but its mass is much smaller. Saturn is the only planet less dense than water, meaning that Saturn would float if there were a pool of water gigantic enough to hold it.

Orbit and rotation. Saturn's diameter is almost 74,900 mi at the equator, while its polar diameter is more than 7,300 mi shorter. Like Jupiter, its noticeable oblateness is a result of the liquidity of the planet and its extremely rapid rate of rotation; a day is little more than 10 Earth hours long.

Distance from the sun	
Perihelion	840.44 mil mi

Semi-major axis (mean distance)	890.8 mil mi (9.582 AU)
Aphelion	941.07 mil mi
Period of revolution around sun	29.458 yr.
Orbital eccentricity	0.0565
Orbital inclination	2.485°
Synodic day (midday to midday)	10 hr., 39 min., 23 sec.
Sidereal day	10 hr., 39 min., 22 sec.
Rotational inclination	26.73°
Mass (Earth = 1)	95.159
Mean radius	36,184 mi
Mean density (Earth = 1)	0.125
Natural satellites	82
Average temperature*	−218°F
*i.e., temperature where atmospheric pressure equals 1 Earth atmosphere.	

Atmosphere. Saturn's atmosphere is composed primarily of 96.3% hydrogen, 3.3% helium, and traces of methane, ammonia, hydrogen deuteride, ethane, and water. Saturn's atmosphere is much like that of Jupiter, except that the temperature at the top of its cloud layer is at least 50°F colder.

Surface and composition. Saturn's atmosphere resembles Jupiter's; it likely has a small dense center surrounded by a deep ocean of hydrogen.

Natural satellites. Saturn has 82 known natural satellites, 20 of which were discovered in 2019. Saturn's moon Mimas has an impact crater 81 mi across (the moon itself is only 249 mi across). Enceladus has an atmosphere and shows evidence of geysers that spit water ice and vapor. Two tiny moons orbit within the rings, plowing through and making gaps in the rings along their orbits. Pan, the innermost satellite, creates the Encke Gap of Saturn's A-ring. Daphnis creates the Keeler Gap. The most intriguing Saturnian moon is Titan. The second-biggest moon in the solar system, Titan is bigger than Mercury. Its atmosphere is similar to Earth's atmosphere of long ago; it is made up of approximately 95% nitrogen with traces of methane. Titan's atmosphere extends about 360 mi into space whereas most of Earth's atmosphere lies within 37 mi of the surface. Photographs from Titan's surface, taken by the *Huygens* lander in

2005, show a muddy terrain, with possible deposits of water ice, channels carved by liquid methane springs, and an interesting boundary between light and dark material on the surface. In 2006, scientists found sand dunes on Titan's surface. The "sand" is believed to be tiny water ice crystals or organic compounds. Surface phenomena such as sand dunes are signs of erosion and wind. Unlike winds on Earth or Mars, Titan's winds are not the result of uneven solar heating on the moon's surface but rather Saturn's gravitational pull (similar to how the moon acts on the Earth's oceans).

Rings. Saturn's ring system is the planet's most recognizable feature. It begins about 4,000 mi above the visible disk of Saturn lying above its equator and extends about 260,000 mi into space. The diameter of the ring system visible from Earth is about 170,000 mi; the rings are estimated to be about 700 ft thick. The rings are composed of rock and ice and range in size from tiny particles to large chunks of material the size of a bus. There are several divisions in the rings. The 2,920-mi Cassini division, the gap between the A and B rings, is the largest division.

Uranus

Uranus, discovered by Sir William Herschel in 1781, was the first planet discovered using a telescope. It was named for the father of the Titans in Roman mythology.

Orbit and rotation. Uranus has a diameter of over 31,000 mi and spins once in approximately 17.23 hours, according to magnetic data collected by *Voyager 2*. One of the most fascinating features of Uranus is how far over it is tipped. Its north pole lies 98° from its orbital plane. Thus, its seasons are extreme. Over its 84-year orbit, when the sun rises at the north pole, it shines there for about 42 Earth years; then it sets, and the north pole is in darkness for 42 Earth years. In addition to its rotational tilt, Uranus's magnetic field axis is tipped 58.6° from its rotational axis and is displaced about 30% of its radius away from the planet's center.

Distance from the sun	
Perihelion	1,703.4 mil mi

Semi-major axis (mean distance)	1,784.8 mil mi (19.201 AU)
Aphelion	1,866.4 mil mi
Period of revolution around sun	84.01 yr.
Orbital eccentricity	0.0457
Orbital inclination	0.772°
Synodic day (midday to midday)	17 hr., 14 min., 23 sec. (retrograde)
Sidereal day	17 hr., 14 min., 24 sec. (retrograde)
Rotational inclination	97.77°
Mass (Earth = 1)	14.536
Mean radius	15,759mi
Mean density (Earth = 1)	0.23
Natural satellites	27
Average temperature*	-323°F
*i.e., temperature where atmospheric pressure equals 1 Earth atmosphere.	

Atmosphere. The atmosphere is composed primarily of 82.5% hydrogen, 15.2% helium, and 2.3% methane, with small amounts of hydrogen deuteride, ammonia ice, water ice, ammonia hydrosulfide, and methane ice.

Surface and composition. Uranus has no solid surface, and likely no rocky core but rather a mixture of rocks and assorted ices with about 15% hydrogen and some helium.

Natural satellites. Uranus has 27 known moons, which have orbits lying in the plane of the planet's equator. Five moons are relatively large, while 22 are very small and were only discovered with the *Voyager 2* mission or in later observations. Miranda has grooved markings, reminiscent of Jupiter's Ganymede, but often arranged in a chevron pattern. Rifts and channels on Ariel provide evidence of liquid flowing over its surface in the past. Umbriel is extremely dark, prompting some observers to regard its surface as among the oldest in the system. Titania has rifts and fractures but not the evidence of flow found on Ariel. Oberon's main feature is its surface saturated with craters, unrelieved by other formations.

Rings. In the equatorial plane there is also a complex of 11 rings, 9 of which were discovered in 1978 by observers watching Uranus

pass before a star.

Neptune

Named for the Roman god of the sea, Neptune was the first planet discovered through mathematical predictions before it was directly observed. Its approximate orbit and position were first calculated independently by British astronomer John Couch Adams and French astronomer Urbain Le Verrier in 1845. In 1846, German astronomer Johann Galle first observed Neptune through a telescope.

Orbit and rotation. Neptune orbits the sun in 164.8 Earth years in a nearly circular orbit. Its magnetic field is considerably asymmetric to the planet's structure, similar to, but not so extreme as, Uranus's magnetic field. Neptune's magnetic field axis is tipped 46.9° from its rotational axis and is displaced more than 55% of its radius away from the planet's center.

Distance from the Sun	
Perihelion	2,761.7 mil mi
Semi-major axis (mean distance)	2,793.1 mil mi (30.047 AU)
Aphelion	2,824.5 mil mi
Period of revolution around sun	164.79 yr.
Orbital eccentricity	0.0113
Orbital inclination	1.769°
Synodic day (midday to midday)	16 hr., 6 min., 37 sec.
Sidereal day	16 hr., 6 min., 36 sec.
Rotational inclination	28.32°
Mass (Earth = 1)	17.147
Mean radius	15,301 mi
Mean density (Earth = 1)	0.297
Natural satellites	14
Average temperature*	-330°F
*i.e., temperature where atmospheric pressure equals 1 Earth atmosphere.	

Atmosphere. The Neptunian atmosphere is composed primarily of 80% hydrogen, 19% helium, 1.5% methane, and small amounts of hydrogen deuteride, ethane, ammonia ice, water ice, ammonia hydrosulfide, and methane ice. Neptune's atmosphere is quite blue,

with quickly changing white clouds often suspended high above an apparent surface. A Great Dark Spot, reminiscent of Jupiter's Great Red Spot, was discovered in 1989 when *Voyager 2* visited the planet. Observations with the Hubble Space Telescope have shown that the Great Dark Spot originally seen by *Voyager* has apparently dissipated, but a new dark spot has since appeared. Lightning and auroras have been found on other giant planets, but only the aurora phenomenon has been seen on Neptune. As with the other giant planets, Neptune emits more energy than it receives from the sun. The excess has been found to be 2.7 times the solar contribution.

Surface and composition. As with the other giant planets, Neptune may have no solid surface or exact diameter. However, a mean value of 30,600 mi may be assigned to a diameter between atmosphere levels where the pressure is about the same as sea level on Earth.

Natural satellites. The largest of Neptune's 14 satellites is Triton. It is the only large moon in a retrograde orbit, which suggests that it was captured rather than having formed along with the planet. Triton's large size, sufficient to raise significant tides on the planet, may one day, billions of years from now, bring Triton close enough to Neptune for Triton to be torn apart. Triton has a tenuous atmosphere of nitrogen with a trace of hydrocarbons and evidence of active geysers injecting material into it. Triton is the coldest object yet measured in the solar system with a surface temperature of -391°F . Only about half of Triton has been observed, but its terrain shows cratering and a strange regional feature described as resembling the skin of a cantaloupe. Nereid has the highest orbital eccentricity (0.75) of any moon. Its long looping orbit suggests that it was also captured. In 2003, two more moons, which orbit farther from their parent planet than any other moons in the solar system, were discovered. In July 2013, archival Hubble Space Telescope images were used to discover the existence of a 14th natural satellite of Neptune. At less than 20 km diameter, it is the smallest of Neptune's known moons. The *Voyager 2* probe in 1989 confirmed the existence of six rings around Neptune composed of very fine particles. There may be some clumps in the rings' structure. It is not known whether

Neptune's satellites influence the formation or maintenance of the rings.

Dwarf Planets

Ceres

Distance from the Sun	
Perihelion	237 mil mi (2.55 AU)
Semi-major axis (mean distance)	257 mil mi (2.77 AU)
Period of revolution around Sun	4.6 yr.
Orbital eccentricity	0.0756
Orbital inclination	10.59°
Sidereal day	9.074 hr.
Mass (Earth = 1)	0.00015
Mean radius	292 mi

Ceres was the first asteroid discovered; Italian astronomer Guiseppe Piazzi first observed it on Jan. 1, 1801. In the 1800s, it was considered a planet but lost that designation. Ceres is the largest object in the asteroid belt, comprising nearly one third of all the mass of asteroids. In Aug. 2006, it was designated a dwarf planet by the Intl. Astronomical Union (IAU).

After a journey of over seven years, the *Dawn* spacecraft entered into orbit around Ceres in Mar. 2015, making *Dawn* the first spacecraft to visit a dwarf planet. Astronomers are particularly interested in asteroids since they are thought to be rocky protoplanets, examples of the building blocks from which planets formed early in the history of the solar system. *Dawn's* scientific instrumentation consists of cameras for surface imaging, a spectrometer for measuring surface mineralogy, and a neutron detector for measuring elemental composition of Ceres. *Dawn* has produced high-resolution maps of the entire surface and the most accurate measurements of Ceres's size and mass. The images show a heavily cratered surface with features such as extremely reflective spots within a crater—thought to be freshly exposed water ice—and at least one mountain several miles high.

Orbit and rotation. Ceres orbits the sun in the asteroid belt region between Mars and Jupiter.

Surface and composition. Ceres's composition is similar to that of the stony meteorites known as carbonaceous chondrites. These are considered to be the oldest materials in the solar system, with a composition reflecting that of the primitive solar nebula. Extremely dark in color, probably because of their hydrocarbon content, they show evidence of having absorbed water. Thus, unlike the Earth and the moon, they have never melted nor been reheated since they first formed. *Dawn* observations suggest that the surface of Ceres consists largely of water ice, though its interior is mostly rock. Up to 25% of Ceres's mass may be water ice. There is evidence for hydrothermal vents at the surface of Ceres, perhaps indicating that liquid water existed below the surface in the recent past. Further study using *Dawn* will try to confirm observations suggesting that water evaporates from the surface and produces a diffuse atmosphere.

Pluto

Distance from the sun	
Perihelion	2,756.9 mil mi
Semi-major axis (mean distance)	3,670.1 mil mi (39.482 AU)
Aphelion	4,583.2 mil mi
Period of revolution around sun	247.74 yr.
Orbital eccentricity	0.2502
Orbital inclination	17.09°
Synodic day (midday to midday)	6 d., 9 hr., 17 min. (retrograde)
Sidereal day	6 d., 9 hr., 18 min. (retrograde)
Rotational inclination	119.59°
Mass (Earth = 1)	0.0022
Mean radius	736.5 mi
Mean density (Earth = 1)	0.339
Natural satellites	5
Average surface temperature	−369°F

Pluto, named for the Roman god of the underworld, is the largest Kuiper Belt object (KBO) by radius, and the second largest by mass. It was first discovered in 1930 by American astronomer Clyde Tombaugh and classified as a planet until 2006, when the IAU changed its designation to dwarf planet. In 2008, Pluto was designated by the IAU as the prototype for a class of objects called **plutoids**, bodies that (a) have an average distance from the sun greater than Neptune's; (b) are large enough that gravity determines their shape; and (c) have not cleared their orbit of other objects. Haumea, Makemake, and Eris are also plutoids. The *New Horizons* spacecraft, launched on a voyage to Pluto and beyond in 2006, made the first flyby of Pluto on July 14, 2015, and traveled on to a flyby of Kuiper belt object 2014 MU69 (Arrokoth), nicknamed Ultima Thule, on Jan. 1, 2019.

Orbit and rotation. Pluto's orbit is highly eccentric; although its average distance from the sun is 3.7 billion mi, it may get as close as 2.76 billion mi and as far as 4.58 billion mi. For about 20 years of its 248-year orbit, it is closer to the sun than Neptune. Currently, it is beyond Neptune's orbit.

Atmosphere and surface. Before the *New Horizons* flyby, all observations of Pluto had been made with telescopes nearly 3 billion mi away, so the mission brought new data to light. The mass and density of Pluto suggests that it is composed of a rocky core with an overlying water-ice mantle. Close-up observations of Pluto from *New Horizons* revealed a mixed surface, with some ancient, heavily cratered terrain and other younger, smoother plains with no craters. The smooth terrain, estimated to be no more than 100 mil years old, is much younger than scientists expected and may indicate that geologic processes continue to modify Pluto. Nitrogen ice on the smooth plains appears to be flowing, like glaciers on Earth, onto the more heavily cratered surface. Compositional evidence shows that the smooth areas contain nitrogen, methane, and carbon monoxide ices. Scientists also found several mountain ranges rising more than 2 mi above the smooth plains; they speculated that the mountains are made of water ice thrust up from below Pluto's nitrogen-rich icy surface.

New Horizons also provided the first close-up measurements of Pluto's atmosphere, confirming earlier measurements of methane, nitrogen, and carbon monoxide, the same molecules that form ice on Pluto's surface. Scientists speculate that the atmosphere forms from evaporation of surface ices when the dwarf planet is closer to the sun. The new measurements also revealed hydrocarbon hazes as much as 50 mi above Pluto's surface. The hazes are thought to form when Pluto's tenuous atmosphere is exposed to the sun's ultraviolet rays. Dark regions on Pluto's surface likely result from these hydrocarbons settling. Knowledge of Pluto will continue to improve as more data is analyzed.

Natural satellites. Pluto has five known natural satellites. Charon, the biggest, has a diameter of 750 mi—about half of Pluto's diameter of 1,474 mi. No other planet or dwarf planet has a moon so close to its size. Discovered in 1978, Charon orbits Pluto at a distance of 12,200 mi and takes 6.39 days to move around the dwarf planet. In this same length of time, Pluto and Charon both rotate once on their axes, meaning that the Pluto-Charon system appears to rotate as virtually a rigid body. Both worlds are roughly spherical and have comparable densities. Because of these similarities and their peculiar relationship, there is debate as to whether Charon should one day be designated a dwarf planet. *New Horizons* provided the first detailed look at Charon, revealing a surface with less color and likely dominated by water ice. New evidence suggests Charon may have had a water ocean in the past. Much of Charon's surface is smoother than expected, with few craters, implying that Charon has an active geology capable of resurfacing. The images also reveal fractures extending hundreds of miles and a canyon around 5 mi deep.

Two other moons, discovered in 2005 and 2006, were officially named Nix and Hydra. Two additional moons, discovered in 2011 and 2012, were officially named Kerberos and Styx by the IAU in 2013. In late 2015, NASA released *New Horizons*-sourced images of Nix and Hydra, revealing irregularly shaped objects about 25 and 35 mi across, respectively. Astronomers examining *New Horizons* data

have been surprised to find no additional moons, down to the roughly 1-mi-diameter limit of detectability by the spacecraft.

Haumea

Distance from the sun	
Semi-major axis (mean distance)	43.355 AU
Period of revolution around sun	285.48 yr.
Orbital eccentricity	0.189
Orbital inclination	28.20°
Mass (Earth = 1)	0.0007
Mean radius	420 mi
Natural satellites	2

Haumea was discovered in 2004 and was accepted as a dwarf planet by the IAU in 2008.

Orbit and rotation. Haumea has a moderately eccentric orbit and takes about 285 years to go around the sun.

Surface and composition. Spectra of Haumea indicate the presence of almost pure crystalline water ice. The surface reflects about 60% of the sunlight that reaches it. Haumea has a very oblong shape, twice as long as it is wide.

Natural satellites. Haumea has two natural satellites, Hi'iake and Namaka.

Makemake

Distance from the sun	
Semi-major axis (mean distance)	45.715 AU
Period of revolution around sun	309.1 yr.
Orbital eccentricity	0.155
Orbital inclination	28.99°
Mass (Earth = 1)	0.0007
Mean radius	450 mi
Natural satellites	1

Makemake was discovered in 2005 and was accepted as a dwarf planet by the IAU in 2008.

Orbit and rotation. Makemake has a moderately eccentric orbit and takes about 310 years to go around the sun.

Surface and composition. Spectra of Makemake indicate the presence of frozen methane, as well as several organic compounds. The surface is highly reflective and appears similar to that of Pluto.

Natural satellites. Makemake has one natural satellite.

Gonggong (2007 OR10)

Distance from the sun	
Semi-major axis (mean distance)	67.143 AU
Period of revolution around sun	550.19 yr.
Orbital eccentricity	0.505
Orbital inclination	30.87°
Mass (Earth = 1)	0.0006
Mean radius	950 mi
Natural satellites	1

2007 OR10 was discovered in 2007 and was named Gonggong in 2020 pending final approval by the IAU.

Orbit and rotation. 2007 OR10 has a highly elliptical orbit and takes about 550 years to go around the sun.

Surface and composition. Spectra of 2007 OR10 indicate the presence of frozen methane and water ice. The surface is highly reflective and appears similar to that of Pluto.

Natural satellites. One natural satellite of 2007 OR10 was discovered by astronomers using the Hubble Space Telescope in 2017.

Eris

Distance from the sun	
Semi-major axis (mean distance)	67.6497 AU
Period of revolution around sun	556.43 yr.
Orbital eccentricity	0.44171
Orbital inclination	44.204°
Mass (Earth = 1)	0.0027
Mean radius	723 mi
Natural satellites	1

Discovered in 2003 by astronomers at the California Institute of Technology, Eris is the largest dwarf planet by mass, about 27%

larger than Pluto, although Pluto has a slightly larger radius.

Orbit and rotation. Eris has a highly elliptical orbit and takes about 560 years to go around the sun—more than twice the time it takes Pluto. Its inclination is steep, tilted at 44° to the planetary plane. It also has an extremely eccentric orbit. It will be at its closest to the sun, actually coming inside part of Pluto's orbit, in about 280 years.

Surface and composition. Eris, with a surface covered in frozen methane, may be similar to Pluto and the Neptunian moon Triton. Observations made by the Hubble Space Telescope show that Eris's surface is almost white and uniform, reflecting 86% of the light that hits it. This makes it the most reflective body in the solar system. The dwarf planet's interior is likely a mixture of rock and ice.

Natural satellites. Eris has one moon, Dysnomia.

Small Solar System Bodies

Asteroids

Besides planets and moons, many smaller objects orbit the sun. In 2006, the International Astronomical Union (IAU) officially designated these objects "small solar system bodies." Asteroids or minor planets are found mainly in a belt between the orbits of Mars and Jupiter. Within this belt there may be millions of asteroids of varying sizes. Most asteroids are very small. Ceres, which can be classified both as an asteroid and a dwarf planet, is 588 mi in diameter, about one-quarter the diameter of our moon.

Some of these asteroids are gravitationally locked with Jupiter and the sun so that they have roughly the same orbit as Jupiter but are either 60° ahead or behind the planet. These are the **Trojan asteroids**. Many of the smaller moons of the solar system, especially those in retrograde orbits, may be captured asteroids. Asteroids whose orbits either cross or come close to the Earth's orbit are labeled **Near Earth asteroids**, or NEAs. A handful of asteroids have actually been im-aged by the Arecibo and Goldstone radio telescopes and by the NEAR Shoemaker space probe. The *Galileo*

spacecraft imaged the asteroids Gaspra and Ida (including Ida's moon Dactyl) on its way to Jupiter. The Japanese *Hayabusa 2*, after orbiting asteroid Ryugu, returned a sample to Earth Dec. 2020; and NASA's OSIRIS-REx mission, currently orbiting asteroid Bennu, was scheduled to return a sample to Earth in Sept. 2023. As of 2022, 16 asteroids had been visited by spacecraft.

Comets

Comets are small icy bodies that orbit the sun. When one approaches the sun, the energy from the sun boils off material from the comet's icy nucleus, producing an enlarged head (or **coma**), and in many cases an extended tail. Because of that, comets are brighter when near the sun. For large comets, the head may be 100,000 mi across and the tail more than a million mi long, though both are mainly empty space.

Comets have been known since ancient times. British astronomer Edmund Halley (1656-1742) ultimately realized that a group of historical reports were just repeated visits of the same object. Comets are the only astronomical objects named after their discoverers. In 1986, the European spacecraft *Giotto* took the first close-up images of a comet's nucleus, specifically of Comet Halley, showing it had a peanut-shaped nucleus with a longest dimension of about 10 mi.

In 1995, U.S. observers Alan Hale (1958-) and Thomas Bopp (1949-2018) independently discovered a comet that was then beyond the orbit of Jupiter. It is one of the brightest comets of all time. It also holds the record for length of time visible to the naked eye—19 months—and is the most photographed comet in history. In July 2009, an amateur astronomer discovered a large impact scar in the upper atmosphere of Jupiter, likely the result of another cometary impact. In Mar. 2020, astronomers using the *NEOWISE* mission of the Wide-field Infrared Survey Explorer (*WISE*) discovered a comet, which in July 2020 was widely visible to the naked eye. Comet *NEOWISE* is the brightest comet since Hale-Bopp. In 2014, the *Rosetta* spacecraft became the first spacecraft to orbit a comet, 67P/Churyumov-Gerasimenko. *Rosetta* also deployed a lander onto

the comet surface. As of summer 2022, eight comets have been studied directly by spacecraft.

Kuiper Belt

The Kuiper Belt is a doughnut-shaped region that extends to about 50 AU (astronomical units) from the sun and is thought to be the source of short-period comets such as Comets Halley or Swift-Tuttle. It is filled with icy bodies that are in solar orbit. The more than 1,000 objects found in this region in recent years are called Kuiper Belt objects (KBOs). It is estimated that there are more than 70,000 objects 60 mi in diameter or larger within the Kuiper Belt. Dwarf planets Pluto and Eris are considered KBOs. There are at least six KBOs larger than 300 mi in diameter.

On Jan. 1, 2019, *New Horizons* made the first close study of a KBO when it flew by the object 2014 MU 69, originally nicknamed Ultima Thule but now provisionally named Arrokoth by the IAU. In the first images sent back to Earth, Arrokoth appears to be a “contact binary,” com-posed of two smaller bodies, 14 mi and 9 mi across, in close contact with each other. No satellite of Arrokoth was observed.

Arrokoth (2014 MU 69)

Distance from the sun	
Semi-major axis (mean distance)	44.539 AU
Period of revolution around sun	298 yr.
Orbital eccentricity	0.04172
Orbital inclinations	2.451°
Mass (Earth = 1)	Unknown
Mean radius	14 mi (“Ultima”) and 9 mi (“Thule”)

Oort Cloud

The Oort Cloud is a vast spherical region hypothesized to exist around the sun and populated by comets. Dutch astronomer Jan Oort (1900-92) proposed its existence as the origin for long-period comets that enter the inner part of the solar system where the planets orbit. Current technology is not sufficient to detect any

members of the Oort Cloud other than observed comets whose orbits may reach out as far as 50,000 AU. Recent examples of such long-period comets are Comets Hale-Bopp and Hyakutake.

The Sun

Distance from Earth, mean	92.96 mil mi (1 AU)
Sidereal day (rotation period)	25.38 d.
Mass (Earth = 1)	332,900
Mean radius	432,200 mi
Mean density (Earth = 1)	0.255
Average surface temperature	9,941°F

The sun is the Earth's primary source of light and heat and its closest star. The biggest object in the solar system, the sun is 332,900 times more massive than Earth and contains 99.86% of the mass of the entire solar system. On the whole, the sun is made up of about 92.1% hydrogen and 7.8% helium, with trace amounts of other elements. It has a mass and luminosity greater than that of 90% of the stars in the Milky Way galaxy. Although most of the stars that can be easily seen on a clear night are bigger and brighter than the sun, its proximity to Earth makes it appear tremendously large and bright. The sun is 400,000 times as bright as the full moon, and it gives Earth 6 mil times as much light as do all the other stars put together. Because of the great distance between the sun and Earth, it takes about 499 sec., or slightly more than 8 min., for light from the sun to reach Earth.

Composition. The sun has six regions. The first three from the inside out are the core, the radiative zone, and the convective zone. Together they form the interior. The others, which comprise the visible surface, are the photosphere, the chromosphere, and the outermost region, the corona.

The sun's heat and energy are produced in its core. Through a series of nuclear fusion reactions, hydrogen nuclei are converted to helium nuclei, releasing energy in the process. Temperatures in the core are theorized to be 28 mil °F. In 2017 astronomers discovered that the core rotates nearly four times faster than the surface, a

rapidity left over from the time when the sun was formed. From the core, photons transport the energy outward through the radiative zone. It can take photons several million years to pass through this area. In the convective zone, gases move energy outward at a faster rate. Like a boiling pot, bubbles of gas bring energy to the surface.

The photosphere is the visible surface of the sun, that is, the light that we see as sunlight. When sunlight is analyzed with a spectroscope, it is found to consist of a continuous spectrum composed of all the colors of the rainbow, crossed by many dark lines. The dark “absorption lines” are produced by gaseous materials in the outer layers of the sun. More than 60 of the natural terrestrial elements have been identified in the sun, all in gaseous form because of the sun’s intense heat.

Just above the photosphere is the chromosphere, which is visible to the naked eye only in total solar eclipses, during which it appears to be a pinkish-violet layer with occasional great prominences projecting above its general level. With proper instruments, the chromosphere can be seen or photographed whenever the sun is visible. Above the chromosphere is the corona, also visible to the naked eye only at times of total eclipse or with instruments that permit the brighter portions of the corona to be seen. The corona surges millions of miles from the sun; its atoms are all in a state of extreme excitation and high ionization that indicates temperatures nearly 2 mil °F.

Sunspots. These dark, irregularly shaped regions may reach diameters of thousands of miles. There is an intimate connection between sunspots and the corona. At times of low sunspot activity, the fine streamers of the corona are longer above the sun’s equator than over the polar regions of the sun; during periods of high sunspot activity, the corona extends fairly evenly outward from all regions of the sun but to a much greater distance in space. The average life of a sunspot group is two months, but some have lasted for more than a year. Sunspots reach a low point, on average, every 11.3 years, with a peak of activity occurring irregularly between two successive periods of minimal activity. The sun experienced an unusually quiet period in 2008 and 2009; its latest period of maximum activity

occurred in 2014, though this was among the weakest maximums ever recorded.

Solar wind and magnetic field. Magnetic arches, called prominences, may extend tens of thousands of miles into the corona and may release enormous amounts of energy heating the corona. Coronal mass ejections are enormous releases of solar energy. Coronal holes are regions where the corona appears dark in X-rays, and are associated with open magnetic field lines, where the magnetic field lines project out into space instead of back toward the sun. It is in these regions where the high-speed solar wind originates.

The solar wind carries the sun's magnetic field, which extends beyond the planets. This is called the interplanetary magnetic field (IMF). Far past Pluto and the Kuiper Belt, the solar wind and the IMF lose their influence. The boundary between them and interstellar space is called the heliopause. In 2013, NASA announced that the *Voyager 1* spacecraft, launched in 1977, seemed at last to have reached the heliopause, at a distance 18 billion km (11 billion mi) from the sun.

Searching for Extrasolar Planets

The sun is a typical star in many respects and—with over 400 billion stars in the Milky Way—it is plausible that many other stars might have planets. Since 1995, astronomers have gathered evidence of thousands of planets orbiting stars other than the sun. Astronomers have not directly observed most of these objects but inferred their existence from observations of their parent stars.

Astronomers have used two main techniques to detect planets. The first, called the radial-velocity method, uses the Doppler effect to detect periodic changes in the motion of a star caused by the gravitational tug of an unseen planet. The magnitude of the star's motion and the time it takes to repeat can be used to infer the planet's mass and distance from its host star. This technique is most sensitive to high-mass planets orbiting close to their stars because that situation produces more noticeable changes in a star's motion.

The second technique, the transit method, relies on the dimming of a star's light as an unseen planet repeatedly passes in front of it. Astronomers are able to infer the diameter of the planet and the distance at which the planet orbits the star. When combined with the mass determined from the radial-velocity method, astronomers can determine the density of the unseen planet and begin to infer its similarity to planets in our solar system.

Astronomers have also used optical gravitational lensing to detect extrasolar planets. This technique, which detects the observed brightening of a distant background star as a planet passes in front of it, has allowed Southern Hemisphere astronomers to find the most distant planet yet detected, about halfway to the center of our own Milky Way galaxy.

The first planets to be discovered outside the solar system tended to be massive "hot Jupiters," orbiting close to their parent stars (closer than Mercury's orbit around the sun) and comparable in mass to the gas giant Jupiter. But as detection instruments and techniques have improved, smaller and more distant planets have been discovered. The planets discovered so far seem to fall into several groups: rocky planets as massive as 1.75 times that of Earth; mini-Neptunes, 2-3.5 times as massive as Earth, with gas surrounding a rocky core; "super Earths" more massive than the mini-Neptunes; and gas giants, as massive or more massive than Jupiter.

In 2005, astronomers obtained the first direct image of an extrasolar planet around a normal star called GQ Lupi, which is like Earth's sun but younger. The planet is about 100 AU (astronomical units) away from the star and estimated to be about twice as massive as Jupiter.

In 2006, astronomers discovered what they call a "super Earth" orbiting a red dwarf 9,000 light-years away. The planet appears to have about 13 times Earth's mass and may be composed of rock and ice, but it is believed not to have liquid on its surface. Such super Earths appear to be common in extrasolar planetary systems. In 2007, astronomers detected water in the atmosphere of an extrasolar planet for the first time.

In 2009, NASA launched Kepler, the first telescope sensitive enough to detect Earth-sized planets around other stars. Kepler's first-released data in 2010 indicated that small planets are more common than large planets. Kepler has now detected a large number of planets with diameters similar to that of Earth. Some of the planets are known to orbit within the host star's habitable zone, meaning that the conditions are such that liquid water could exist on the planetary surface. As of July 2022, astronomers had confirmed over 5,069 planets orbiting more than 3,792 stars; 829 of those stars host more than one planet.

Planets with masses much less than Jupiter's are now regularly discovered. A team of astronomers announced, Aug. 2016, the discovery of a possibly Earth-like planet, Proxima b, in orbit around Proxima Centauri, the star closest to the sun. About 4.2 light-years away, it is the closest known exoplanet. In Feb. 2017, astronomers announced the discovery of at least seven Earth-sized planets orbiting a small star, Trappist-1, located about 40 light-years away. They appear similar in mass and composition to Earth, and three of the planets are in the habitable zone of the star. In June 2017, the Kepler mission announced the discovery of 10 Earth-sized planets, probably rocky in composition, that might support liquid water and could be potentially habitable.

NASA successfully launched the Transiting Exoplanet Survey Satellite (TESS) mission on Apr. 18, 2018, aboard a SpaceX Falcon 9 rocket. This landmark mission was conducting an all-sky survey of extrasolar planets, including those orbiting bright nearby stars, which can be investigated in further detail by large Earth-based and space telescopes. By July 2020, it had finished its primary mission, covering about 75% of space. By 2022, TESS had found 233 confirmed exoplanets as well as over 5,000 candidates needing further detailed observation for confirmation. In Dec. 2019, the European Space Agency launched a complementary mission, Cheops (CHaracterising ExOPlanet Satellite), which is also targeting planets around bright nearby stars.

Earth: Size, Computation of Time, Seasons

Distance from the sun	
Perihelion	91.4 mil mi
Semi-major axis (mean distance)	93 mil mi (1.0000 AU)
Aphelion	94.5 mil mi
Period of revolution	365.256 d.
Orbital eccentricity	0.0167
Orbital inclination	0°
Synodic day (midday to midday)	24 hr., 0 min., 0 sec.
Sidereal day (rotation period)	23 hr., 56 min., 4.2 sec.
Rotational inclination	23.45°
Mass (Earth = 1)	1
Mean radius	3,958.8 mi
Mean density (Earth = 1)	1
Natural satellites	1
Average surface temperature	59°F

Earth is the fifth-largest planet and the third from the sun. Its mass is 5.9736×10^{24} kg. Earth's equatorial diameter is 7,926 mi while its polar diameter is only 7,900 mi.

Size and dimensions. Earth is considered a solid mass, yet it has a large, liquid iron, **magnetic core** with a radius of about 2,160 mi. Surprisingly, it has a solid **inner core** that may be a large iron crystal, with a radius of 760 mi. Around the core is a thick shell, or **mantle**, of dense rock. This mantle is composed of materials rich in iron and magnesium. It is somewhat plastic-like, and under slow steady pressure, it can flow like a liquid. The mantle, in turn, is covered by a thin **crust** forming the solid granite and basalt base of the continents and ocean basins. Over broad areas of Earth's surface, the crust has a thin cover of sedimentary rock such as sandstone, shale, and limestone formed by weathering and by deposits of sands, clays, and plant and animal remains.

The temperature inside the Earth increases about 1°F with every 100 to 200 ft in depth, in the upper 100 km (62 mi) of Earth. It reaches nearly 8,000°F-9,000°F at the center. The heat is believed to come from radioactivity in rocks, pressures within Earth, and the original heat of formation.

Atmosphere. Earth's atmosphere is a blanket composed of 78% nitrogen, 21% oxygen, and 1% argon. Present in minute quantities are carbon dioxide, hydrogen, neon, helium, krypton, and xenon. Water vapor displaces other gases and varies from nearly zero to about 4% by volume. The atmosphere rests on Earth's surface with a weight equivalent to a layer of water 34 ft deep. For about 300,000 ft upward, the gases remain in the proportions stated. Gravity holds the gases to Earth. The weight of the air compresses it at the bottom so that the greatest density is at Earth's surface. Pressure and density decrease as height increases.

The lowest layer of the atmosphere extending up from the Earth's surface about 7.5 mi is the **troposphere**, which contains 90% of the air. This is also where most weather phenomena occur. The temperature drops with increasing height through this layer. The **stratosphere** extends about 23 mi above the troposphere; the temperature generally increases with height within this layer. The stratosphere contains **ozone**, which prevents ultraviolet rays from reaching Earth's surface. Since there is very little convection in the stratosphere, jets regularly cruise in the lower parts to provide a smoother ride for passengers.

Above the stratosphere is the **mesosphere**, where the temperature again decreases with height for another 19 mi. Extending above the mesosphere to the outer fringes of the atmosphere is the **thermosphere**, a region where temperature once more increases with height to a value measured in thousands of degrees Fahrenheit. The lower portion of this region, extending from 50 to about 400 mi in altitude, is characterized by high ion density and is thus called the **ionosphere**. Most meteors are in the lower thermosphere or the mesosphere at the time they are observed.

Longitude and latitude. Position on the globe is measured by meridians and parallels. Meridians, which are imaginary lines drawn around Earth through the poles, determine **longitude**. The meridian running through Greenwich, England, is the **prime meridian** of longitude; all others are either E or W. Parallels, which are imaginary circles parallel with the equator, determine **latitude**. The length of a degree of longitude varies as the cosine of the latitude. At the

equator a degree of longitude is 69.171 statute mi; this is gradually reduced toward the poles. Value of a longitude degree at the poles is zero.

Latitude is reckoned by the number of degrees N or S of the **equator**, an imaginary circle on Earth's surface everywhere equidistant between the two poles. According to the International Astronomical Union, the length of a degree of latitude is 68.708 statute mi at the equator and varies slightly N and S because of the oblate form of the globe. At the poles, it is 69.403 statute mi.

Definitions of time. Earth rotates on its axis and follows an elliptical orbit around the sun. The rotation makes the sun appear to move across the sky from E to W. This rotation determines day and night, and the complete rotation, in relation to the sun, is called the **apparent or true solar day**. A sundial thus measures **apparent solar time**. This length of time varies, but an average determines a mean solar day of 24 hours.

The mean solar day and **mean solar time** are in universal use for civil purposes. Mean solar time may be obtained from apparent solar time by correcting observations of the sun for the **equation of time**. Mean solar time may be up to 16 min. different from apparent solar time.

Sidereal time is the measure of time defined by the diurnal motion of the vernal equinox and is determined from observation of the meridian transits of stars. One complete rotation of Earth relative to the equinox is called the **sidereal day**. The **mean sidereal day** is 23 hr., 56 min., 4.2 sec. of mean solar time.

The interval required for Earth to make one absolute revolution around the sun is a **sidereal year**; it consisted of 365 days, 6 hr., 9 min., and 9.5 sec. of mean solar time (approximately 24 hr. per day) in 1900 and has been increasing at the rate of 0.0001 second annually.

The **tropical year**, upon which our calendar is based, is the interval between two consecutive returns of the sun to the vernal equinox. The tropical year consisted of 365 days, 5 hr., 48 min., and 46 sec. in 1900. It has been decreasing at the rate of 0.53 sec. per century. The **calendar year** begins at midnight precisely, local clock

time, on the night of Dec. 31-Jan. 1. The day and the calendar month also begin at midnight by the clock.

On Jan. 1, 1972, the Bureau International des Poids et Mesures in Paris introduced **International Atomic Time** (TAI) as the most precisely determined time scale for astronomical usage. The fundamental unit of TAI in the international system of units is the second, defined as the duration of 9,192,631,770 periods of the radiation corresponding to the transition between two hyperfine levels of the ground state of the cesium-133 atom. **Coordinated Universal Time** (UTC), which serves as the basis for civil timekeeping and is the standard time of the prime meridian, is officially defined by a formula which relates UTC to mean sidereal time in Greenwich, England. (UTC replaced Greenwich Mean Time as the basis for standard time for the world.)

Zones and seasons. The five zones of Earth's surface are the Torrid, lying between the Tropics of Cancer and Capricorn; the N Temperate, between Cancer and the Arctic Circle; the S Temperate, between Capricorn and the Antarctic Circle; and the two Frigid Zones, between the Polar Circles and the Poles.

The inclination, or tilt, of Earth's axis, $23^{\circ}45'$ away from a perpendicular to Earth's orbit of the sun, determines the seasons. These are commonly marked in the N Temperate Zone, where spring begins at the vernal equinox, summer at the summer solstice, autumn at the autumnal equinox, and winter at the winter solstice. In the S Temperate Zone, the seasons are reversed. Spring begins at the autumnal equinox, summer at the winter solstice, and so on.

The points at which the sun crosses the equator are the **equinoxes**, when day and night are most nearly equal. The points at which the sun is at a maximum distance from the equator are the **solstices**, when days and nights are most unequal. However, at the equator, day and night are equal throughout the year.

In June, the North Pole is tilted $23^{\circ}27'$ toward the sun, and the days in the Northern Hemisphere are longer than the nights, while the days in the Southern Hemisphere are shorter than the nights. In Dec., the North Pole is tilted $23^{\circ}27'$ away from the sun, and the situation is reversed.

Seasons in 2023. In 2023, the four seasons begin in the Northern Hemisphere as shown. (Add 1 hour to Eastern Standard Time for Atlantic Time; subtract 1 hour for Central, 2 for Mountain, 3 for Pacific, 4 for Alaska, 5 for Hawaii-Aleutian. Also shown is Coordinated Universal Time.)

Season	Date	UTC	EST/EDT
Vernal Equinox (spring)	Mar. 20	21:25	17:25 EDT
Northern Solstice (summer)	June 21	14:58	10:58 EDT
Autumnal Equinox (fall)	Sept. 23	06:50	02:50 EDT
Southern Solstice (winter)	Dec. 22	03:28	22:28 EST Dec. 21

Poles. The geographic (rotation) poles, or points where Earth's axis of rotation cuts the surface, are not absolutely fixed in the body of Earth. The pole of rotation describes an irregular curve about its mean position.

Two periods have been detected in this motion: (1) an annual period due to seasonal changes in barometric pressure, to load of ice and snow on the surface, and to other seasonal phenomena; (2) a period of about 14 months due to the shape and constitution of Earth. In addition, there are small but as yet unpredictable irregularities. The whole motion is so small that the actual pole at any time remains within a circle of 30 or 40 ft in radius centered at the mean position of the pole.

The pole of rotation for the time being is, of course, the pole having a latitude of 90° and an indeterminate longitude.

Magnetic poles. Although Earth's magnetic field resembles that of an ordinary bar magnet, this magnetic field is probably produced by electric currents in the liquid currents of the Earth's outer core. The **north magnetic pole** of Earth is that region where the magnetic force is downward, and the **south magnetic pole** is that region where the magnetic force is upward. A compass placed at the magnetic poles experiences no directive force in azimuth (i.e., direction).

There are slow changes in the distribution of Earth's magnetic field. This slow temporal change is referred to as the secular change of the main magnetic field, and the magnetic poles shift due to this. The location of the N magnetic pole was first measured in 1831 at Cape Adelaide on the W coast of Boothia Peninsula in Canada's Northwest Territories (about latitude 70° N and longitude 96° W). Since then it has moved over 500 mi. As of 2022 it was estimated to be at latitude 86.29° N, longitude 151.95° E, the Arctic Ocean far north of Siberia. Measurement for several decades by Canadian scientists indicates the motion of the pole has accelerated, now averaging about 34 mi per year.

The direction of the horizontal components of the magnetic field at any point is known as magnetic N at that point, and the angle by which it deviates E or W of true N is known as the magnetic declination.

A compass without error points in the direction of magnetic north. (In general, this is not the direction of the true rotational North Pole.) If you follow the direction indicated by the N end of the compass, you will go along an irregular curve that eventually reaches the north magnetic pole (though not usually by a great-circle route). However, the action of the compass should not be thought of as due to any influence of the distant pole, but simply as an indication of the distribution of Earth's magnetism at the place of observation.

Rotation. The speed of Earth's rotation about its axis is slightly variable. The variations may be classified as:

(A) **Secular.** Tidal friction acts as a brake on the rotation and causes a slow secular increase in the length of the day, about 1 millisecond per century.

(B) **Irregular.** The speed of rotation may increase for a number of years (about 5 to 10) and then start decreasing. The maximum difference from the mean in the length of the day during a century is about 5 milliseconds. The accumulated difference in time has amounted to approximately 44 seconds since 1900. The cause is probably motion in the interior of Earth.

(C) **Periodic.** Seasonal variations exist with periods of 1 year and 6 months. The cumulative effect is such that each year, Earth is late

about 30 milliseconds near June 1 and is ahead about 30 milliseconds near Oct. 1. The maximum seasonal variation in the length of the day is about 0.5 millisecond. It is believed that the principal cause of the annual variation is the seasonal change in the wind patterns of the Northern and Southern Hemispheres. The semiannual variation is due chiefly to tidal action of the sun, which distorts the shape of Earth slightly.

The Moon

Distance from Earth	
Perigee	225,744 mi
Semi-major axis (mean distance)	238,855 mi
Apogee	251,966 mi
Period of revolution	27.322 d.
Orbital eccentricity	0.0549
Orbital inclination	5.145°
Synodic orbital period (period of phases)	29.53 d.
Sidereal day (rotation period)	27.322 d.
Rotational inclination	6.68°
Mass (Earth = 1)	0.0123
Mean radius	1,079 mi
Mean density (Earth = 1)	0.607
Average surface temperature	−100°F

The moon is the second-brightest object in the sky (the sun is the first). Earth's only natural satellite, the moon is the force behind the rising and falling of tides, and it helps to regulate Earth's inclination as they orbit the sun. Many probes have been sent to the moon, and between 1969 and 1972, 12 U.S. astronauts walked on its surface. The moon is the subject of renewed international interest. In 2007, Japan and China orbited satellites around the moon, India orbited a spacecraft in fall 2008, and the U.S. sent an orbiter and impactor in 2009. In Sept. 2009, American scientists announced the discovery of a thin layer of water ice near the lunar poles. Since 2009, NASA has been mapping and measuring the surface composition and other properties of the moon using the Lunar Reconnaissance Orbiter. In

Sept. 2013, NASA launched *LADEE*, a mission to study the ephemeral lunar atmosphere and lunar dust from a low orbit. In Dec. 2013, China became the third nation to land a spacecraft on the moon when *Chang'e 3* set down on Mare Imbrium. *Chang'e 3* released the *Yutu* rover to study the lunar surface. On July 22, 2019, India successfully launched the *Chandrayaan-2* mission. Scheduled to land a rover near the south pole of the moon on Sept. 7, 2019, mission control lost contact with the lander 1.3 mi from the surface, though an orbiter remained operational.

Orbit and rotation. The moon completes a circuit around Earth in a period that averages 27 days, 7 hr., 43.2 min. This is the moon's sidereal period. Because of the motion of the moon in common with Earth around the sun, the mean duration of the lunar month—the period from one new moon to the next new moon—is 29 days, 12 hr., 44.05 min. This is the moon's synodic period.

The mean distance of the moon from Earth is 238,855 mi, but its orbit about Earth is elliptical, and thus the actual distance varies considerably. The maximum distance from Earth that the moon may reach is 251,966 mi and the least distance is 225,744 mi.

The moon rotates on its axis in a period of time that is exactly equal to its sidereal revolution about Earth—27.322 days. Thus the backside, or farside, of the moon always faces away from Earth. But this does not mean that the backside is always dark. The farside of the moon gets as much direct sunlight as the nearside; at new moon phase, the farside of the moon is fully lit but not visible from Earth.

The moon's revolution about Earth is irregular because of its elliptical orbit. The moon's rotation, however, is regular, and this, together with the irregular revolution, produces what is called libration in longitude, which permits an observer on Earth to see first farther around the eastern side and then farther around the western side of the moon. The moon's variation north or south of the ecliptic permits one to see farther over first one pole of the moon and then the other; this is called libration in latitude. These two libration effects permit observers on Earth to see a total of about 60% of the moon's surface over a period of time.

Atmosphere and surface. The moon, like the planet Mercury, has no real atmosphere to speak of. What little exists is variable and tenuous. With its long day and night, the daytime temperature can reach 260°F. The coldest nighttime temperature is –280°F. This day-to-night contrast is exceeded only by that on Mercury. The lunar surface has not changed much since humans began observing it. The side visible from Earth has large craters and vast dark areas called maria that were once lava. The farside has almost no maria but is pockmarked with craters; it was first photographed in 1959 by the Soviet space probe *Lunik III*.

Recent findings show that up to 300 mil metric tons of water ice may exist in craters at the lunar poles. In its interior, the moon may have a small core, which supports the idea that most of the moon's mass was ripped away from the early Earth when a Mars-sized object collided with Earth.

Harvest moon and hunter's moon. The harvest moon, the full moon nearest the autumnal equinox, ushers in a period of several days when the moon rises soon after sunset. This phenomenon gives farmers in temperate latitudes extra hours of light in which to harvest their crops. The 2023 harvest moon falls on Sept. 29. Harvest moon in the Southern Hemisphere temperate latitudes in 2023 falls on Mar. 7.

The next full moon after harvest moon is called the hunter's moon; it is accompanied by a similar but less marked phenomenon. In 2023, the hunter's moon occurs on Oct. 28 in the Northern Hemisphere and on Apr. 6 in the Southern Hemisphere.

CALENDAR

Western Calendars

The **Julian calendar**, under which all Western nations measured time until 1582 CE, was authorized by Julius Caesar in 46 BCE. It called for a year of 365 $\frac{1}{4}$ days, starting in Jan., with every fourth year being a **leap year** of 366 days. St. Bede, an Anglo-Saxon monk also known as the Venerable Bede, announced in 730 CE that the Julian year was 11 min., 14 sec. too long, a cumulative error of about a day every 128 years, but nothing was done about this for centuries.

By 1582 the accumulated error was estimated at 10 days. In that year, Pope Gregory XIII decreed that the day following Oct. 4, 1582, should be called Oct. 15, thus dropping 10 days and initiating the **Gregorian calendar**.

The Gregorian calendar perpetuated a chronological system devised by the monk Dionysius Exiguus (fl. 6th cent.). His chronology started with the first year following the birth of Jesus Christ, which he inaccurately took to be year 753 in the Roman calendar. Leap years were continued, but, to prevent further displacements, centesimal years (years ending in 00) were made common years, not leap years, unless divisible by 400. Under this plan, 1600 and 2000 were leap years; 1700, 1800, and 1900 were not.

The Gregorian calendar was adopted at once by France, Italy, Spain, Portugal, and Luxembourg. Within two years, most German Catholic states, Belgium, and parts of Switzerland and the Netherlands were brought under the new calendar, and Hungary followed in 1587. The rest of the Netherlands, along with Denmark and the German Protestant states, made the change in 1699-1700.

The British government adopted the Gregorian calendar and imposed it on all its possessions, including the American colonies, in 1752, decreeing that the day following Sept. 2, 1752, should be

called Sept. 14, a loss of 11 days. All dates preceding were marked OS, for Old Style. In addition, New Year's Day was moved to Jan. 1 from Mar. 25. (Under the old reckoning, for example, Mar. 24, 1700, was followed by Mar. 25, 1701.) Thus George Washington's birth date, which was Feb. 11, 1731, OS, became Feb. 22, 1732, NS (New Style). In 1753, Sweden also went Gregorian.

In 1793, the French revolutionary government adopted a calendar of 12 months of 30 days each with five extra days in Sept. of each common year and six extra days every fourth year. Napoleon reinstated the Gregorian calendar in 1806.

The Gregorian system later spread to non-European regions, replacing traditional calendars at least for official purposes. Japan in 1873, Egypt in 1875, China in 1912, and Turkey in 1925 made the change, usually in conjunction with political upheaval. In China, the republican government began reckoning years from its 1911 founding. After 1949, the People's Republic adopted the Common (or Christian) Era year count, even for the traditional lunar calendar, which it retained. In 1918, the Soviet Union decreed that the day after Jan. 31, 1918, OS, would be Feb. 14, 1918, NS. Greece changed over in 1923. The Russian Orthodox church and some other Christian sects retained the Julian calendar. Saudi Arabia switched to the Gregorian calendar in 2016.

As of 2022, several nations officially used non-Gregorian calendars. Ethiopia used a calendar similar to the Julian system, and Afghanistan and Iran used the traditional Persian, or Solar Hijri, calendar.

To convert from the Julian to the Gregorian calendar, add 10 days to dates Oct. 5, 1582, through Feb. 28, 1700; after that date, add 11 days through Feb. 28, 1800; 12 days through Feb. 28, 1900; and 13 days through Feb. 28, 2100.

A **century** consists of 100 consecutive years. The 1st century CE may be said to have run from the years 1 through 100. The 20th century by this reckoning consisted of the years 1901 through 2000 and ended Dec. 31, 2000, as did the 2nd millennium CE. The 21st century thus technically began on Jan. 1, 2001.

For a **perpetual calendar**, see [pages 360-61](#).

Gregorian Calendar

Choose the desired year from the table below or from the perpetual calendar (for years 1803 to 2080). The number after each year designates which calendar to use for that year, as shown in the perpetual calendar. (The Gregorian calendar was inaugurated Oct. 15, 1582. From that date through Dec. 31, 1582, use calendar 6.)

Julian Period

How many days have you lived? To determine this, multiply your age by 365, add the number of days since your last birthday, and account for all leap years. Chances are your calculations will go wrong somewhere. Astronomers, however, find it convenient to express dates and time intervals in days rather than in years, months, and days. This is done by placing events within the Julian period.

The Julian period was devised in 1583 by the French classical scholar Joseph Scaliger (1540-1609). Some sources postulate Scaliger named it after his father, Julius Caesar Scaliger; others cite Scaliger's references to the Julian calendar.

Scaliger began with a zero hour, or starting time, of noon on Jan. 1, 4713 BCE (on the Julian calendar). This was the most recent time that three major chronological cycles began on the same day: (1) the 28-year solar cycle, after which dates in the Julian calendar return to the same days of the week (e.g., Feb. 11 falls on a Monday); (2) the 19-year lunar cycle, after which the phases of the moon return to the same dates of the year; and (3) the 15-year indiction cycle, used in ancient Rome to regulate taxes.

It will take 7,980 years to complete the period, the product of the numbers 28, 19, and 15, which have no common factors.

Noon (Universal Time) of Jan. 1, 2023, will be Julian date (JD) 2,459,946; that many days will have passed since the start of the current Julian period. The JD at noon of any date in 2023 may be

found by adding to that number the day of the year for that date and subtracting one.

Julian Calendar

To find which of the 14 calendars of the perpetual calendar ([pages 360-61](#)) applies to any year under the Julian system, find the century for the desired year in the three leftmost columns below. Locate the desired year from among the four top rows. The number at the intersection of that row and column is the calendar designation for that year. For some years and countries, the Julian new year did not start Jan. 1; to find the correct perpetual calendar for Britain and its possessions, you can generally add one year for dates from Jan. 1 to Mar. 24. For example, to look up Feb. 2, 1705, Old Style, use the year 1706.

			Year (last 2 digits of desired year)																											
			01	02	03	04	05	06	07	08	09	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

Signs of the Zodiac

The zodiac is the apparent yearly path of the sun among the stars as viewed from Earth and was divided by the ancients into 12 equal sections or signs, each named for the constellation situated within its limits in ancient times. Astrologers claim that the temperament and destiny of each individual depend on the zodiac sign under which the person was born and the relationships between the planets at that time and throughout the person's life.

Below are the 12 traditional signs and the traditional range of dates pertaining to each:

Aries (Ram), March 21-April 19

Taurus (Bull), April 20-May 20

Gemini (Twins), May 21-June 21

Cancer (Crab), June 22-July 22

Leo (Lion), July 23-August 22

Virgo (Virgin), August 23-September 22

Libra (Scales), September 23-October 23

Scorpio (Scorpion), October 24-November 21

Sagittarius (Archer), November 22-December 21

Capricorn (Goat), December 22-January 19

Aquarius (Water Bearer), January 20-February 18

Pisces (Fishes), February 19-March 20

Chinese Calendar and Asian Festivals

The Chinese calendar, like the Jewish and Islamic calendars (see the Religion chapter), is a lunisolar calendar. It is divided into 12 months of 29 or 30 days (compensating for the lunar month's mean duration of 29 days, 12 hr., 44.05 min.). This calendar is synchronized with the solar year by the addition of extra months at fixed intervals.

The Chinese calendar runs on a 60-year cycle. The last 24 years of the cycle 1864-1923 along with the cycles 1924-83 and 1985-2043, and the first 24 years of the cycle 2044-2103 are shown below grouped by their association with 1 of 12 animals in the Chinese zodiac. Jan. 22, 2023, marks the beginning of the year 4721 in the Chinese calendar and is designated the Year of the Hare.

Both the Western (Gregorian) and traditional lunar calendars are used publicly in China and in North and South Korea, and two New Year's celebrations are held. In Taiwan and Vietnam and in overseas Chinese communities, the lunar calendar is used only to set the dates for traditional festivals, with the Gregorian system in general use.

The 4-day Chinese New Year; the 3-day Vietnamese New Year festival, Tet; and the 3-to-4-day Korean festival, Suh1, begin at the second new moon after the winter solstice. The new moon in East Asia, which is west of the international date line, may be a day later than the new moon in the U.S. The festivals may start, therefore, anywhere between Jan. 21 and Feb. 19 of the Gregorian calendar.

Federal Holidays and Other Notable Dates, 2023

Some dates may be subject to change.

The dates in bold in the calendar above and named below in italics are U.S. federal holidays, designated by the president or Congress and applicable to federal employees and in the District of Columbia. Most U.S. states also observe these holidays, and many states observe others; practices vary by state. In most states the secretary of state's office can provide details.

Special Months

There are many thousands of special months, days, and weeks because of anniversaries, official proclamations, and promotional events, both trivial and serious. Here are a few of the special months:

January: Get Organized Month, National Mentoring Month, National Poverty in America Awareness Month

February: Black History Month, American Heart Month, Library Lovers' Month, Youth Leadership Month

March: Irish-American Heritage Month, National Women's History Month, Red Cross Month, National Frozen Food Month, National Colorectal Cancer Awareness Month

April: National Child Abuse Prevention Month, National Humor Month, Stress Awareness Month, Grange Month, Sexual Assault Awareness and Prevention Month

May: Clean Air Month, Get Caught Reading Month, National Barbecue Month, Asian American and Pacific Islander Heritage Month, National Inventors Month, National Mental Health Month

June: Great Outdoors Month; Lesbian, Gay, Bisexual, and Transgender Pride Month; National Safety Month

July: Cell Phone Courtesy Month, National Hot Dog Month, National Make a Difference to Children Month, Women's Motorcycle Month

August: National Black Business Month, Happiness Happens Month, National Immunization Awareness Month

September: Library Card Sign-Up Month, National Hispanic Heritage Month (Sept. 15-Oct. 15), National Biscuit Month

October: National Domestic Violence Awareness Month, National Breast Cancer Awareness Month, Global Diversity Awareness Month, National Popcorn Poppin' Month

November: National American Indian Heritage Month, National Adoption Month, American Diabetes Month, National Peanut Butter Lovers' Month

December: Safe Toys and Gifts Month, National Impaired Driving Prevention Month, National Tie Month

Standard Time Differences: World Cities

The time indicated in the table is fixed by law and is called the legal time or, more generally, standard time. Use of daylight saving time varies widely. An asterisk (*) indicates morning of the following day. At 12:00 noon, Eastern Standard Time, the standard time (in 24-hour time) in selected cities is as shown.

Wedding Anniversary Gifts

The traditional names for wedding anniversaries go back many years in social usage and have been used to suggest types of appropriate anniversary gifts. Traditional products for gifts are listed here in capital letters, with allowable revisions in parentheses, followed by common modern gifts for each anniversary.

Anniversary	Gift
1st	PAPER, clocks
2nd	COTTON, china
3rd	LEATHER, crystal, glass
4th	LINEN (SILK), appliances
5th	WOOD, silverware
6th	IRON, wood objects
7th	WOOL (COPPER), desk sets
8th	BRONZE, linens, lace

9th	POTTERY (CHINA), leather goods
10th	TIN, ALUMINUM, diamond
11th	STEEL, fashion jewelry
12th	SILK, pearls, colored gems
13th	LACE, textiles, furs
14th	IVORY, gold jewelry
15th	CRYSTAL, watches
20th	CHINA, platinum
25th	SILVER, sterling silver
30th	PEARL, diamond
35th	CORAL (JADE), jade
40th	RUBY, ruby
45th	SAPPHIRE, sapphire
50th	GOLD, gold
55th	EMERALD, emerald
60th	DIAMOND, diamond

Birthstones

Source: American Gem Society

Birth month	Ancient¹ birthstone	Modern birthstone
January	Garnet	Garnet
February	Amethyst	Amethyst
March	Jasper	Bloodstone or Aquamarine
April	Sapphire	Diamond
May	Agate, Chalcedony, or Carnelian	Emerald
June	Emerald	Pearl, Moonstone, or Alexandrite
July	Onyx	Ruby
August	Carnelian	Sardonyx or Peridot
September	Chrysolite	Sapphire
October	Aquamarine	Opal or Tourmaline
November	Topaz	Topaz
December	Ruby	Turquoise, Tanzanite, or Zircon

(1) Varied by region and culture. Birthstones listed here are those of ancient Hebrew

tradition.

Standard Time and Daylight Saving Time

Standard Time

Standard time is reckoned from the prime meridian of longitude in Greenwich, England. The world is divided into 24 zones, each 15 deg of arc, or one hour in time apart. The Greenwich meridian (0 deg) extends through the center of the initial zone. Each zone extends 7.5 deg on either side of its central meridian. Zones to the east are numbered from 1 to 12, with the prefix “minus” indicating the number of hours to be subtracted to obtain Greenwich Time.

Westward zones are similarly numbered, but prefixed “plus,” showing the number of hours that must be added to get Greenwich Time. The standard time maintained in many countries does not coincide with zone time. For example, China extends across five time zones, but the entire country is on Greenwich Time plus 8 hours.

The U.S. and possessions are divided into nine standard time zones. All places in each zone use, instead of their local time, the time counted from the transit of the mean sun across the standard time meridian that passes near the middle of that zone. These time zones are designated as Atlantic, Eastern, Central, Mountain, Pacific, Alaska, Hawaii-Aleutian, Samoa, and Chamorro (Guam and Northern Mariana Isls.); the time in these zones is reckoned from the 60th, 75th, 90th, 105th, 120th, 135th, 150th, and 165th meridians west of Greenwich and the 150th meridian east of Greenwich. The time zone line wanders to conform to local geography. The time in the various zones in the U.S. and U.S. territories west of Greenwich is earlier than Greenwich Time by 4, 5, 6, 7, 8, 9, 10, and 11 hours, respectively. However, Chamorro crosses the international date line and is 10 hours later than Greenwich Time.

24-Hour Time

With the 24-hour system, the day begins at midnight, and times are designated 00:00 through 23:59. Twenty-four-hour time is widely used in scientific work throughout the world. In the U.S., it is also used in operations of the armed forces. In Europe, it is frequently used by the transportation networks in preference to the 12-hour AM and PM system.

International Date Line

The date line, approximately coinciding with the 180th meridian, separates the calendar dates. The date must be advanced one day when crossing in a westerly direction and set back one day when crossing in an easterly direction. The date line frequently deviates from the 180th meridian because of decisions by affected nations. The line is deflected eastward through the Bering Strait and westward of the Aleutians to prevent separating the islands by date. The line is deflected eastward of the Tonga and New Zealand islands in the South Pacific. In 1995, Kiribati announced that its islands east of the date line would observe the same date as islands to the west, though most maps do not depict this deviation in the date line. In 2011, Samoa moved west of the date line to ease its relationship with Australia and New Zealand. The line is established by international custom; there is no international authority prescribing its exact course.

Daylight Saving Time

Daylight saving time is achieved by advancing the clock one hour. Since 2007, daylight saving time has begun at 2 AM on the second Sunday in Mar. and has ended at 2 AM on the first Sunday in Nov. **In 2023, daylight saving time begins at 2 AM on Mar. 12 and ends at 2 AM on Nov. 5.** Prior to 2007, daylight saving time traditionally ran from the first Sunday in Apr. to the last Sunday in Oct.

Daylight saving time was first observed in the U.S. during World War I and again during World War II. In the intervening years, some states and communities observed daylight saving time, using whatever beginning and ending dates they chose. In 1966, Congress passed the Uniform Time Act, which provided that any state or

territory choosing to observe daylight saving time must begin and end on the dates established by federal law. Any state could, by law, exempt itself; a 1972 amendment to the act authorized states in more than one time zone to exempt the entire state or one time zone only. Currently, most of Arizona, Hawaii, Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and Northern Mariana Isls. do not observe daylight saving time. All of Indiana, which is in two time zones, observed daylight saving time for the first time in 2006.

Congress and the secretary of transportation both have authority to change time zone boundaries, which they have done on a number of occasions since 1966. In 2018, Florida passed legislation that would keep the state on daylight saving time year-round, but either Congress or the Transportation Dept. was required to act before the new law could go into effect. By early 2022, 18 other U.S. states had also passed laws/regulations maintaining year-round DST. The Senate—but not yet the House—in Mar. 2022 unanimously passed legislation to make DST permanent beginning in 2023.

Daylight Saving Time: International Usage

Adjusting clock time so as to gain daylight on summer evenings is common throughout the world.

Canada, which extends over six time zones, generally observes daylight saving time during the same period as the U.S. Most provincial governments observe the four-week extension to daylight saving time that went into effect in 2007. Most of Saskatchewan remains on standard time year-round; communities elsewhere in Canada may also exempt themselves from daylight saving time. Beginning in Mar., the territory Yukon began observing Pacific Daylight Saving Time year-round. Most of Mexico observes daylight saving time, except for the state of Sonora, which shares a border with Arizona.

Member nations of the European Union observe a “summer-time period,” a version of daylight saving time, from the last Sunday of Mar. until the last Sunday in Oct. Although the EU Parliament in Mar. 2019 voted to end mandatory DST starting in 2021 and instead allow member countries to follow permanent standard time if they choose,

European Council negotiations to do so had not started as of June 2022.

Turkey stopped observing daylight saving time in 2016; maintaining its “summer hours,” it shifted permanently to Greenwich time plus 3 hours. Russia, which uses 11 time zones, moved to permanent standard time in 2014 after a three-year experiment to maintain year-round “summer hours” proved unpopular. The country observed “winter hours” year-round beginning in Oct. 2014. Morocco abandoned daylight saving time in Oct. 2018, with a Ramadan exception.

China does not observe daylight saving time. Mongolia discontinued daylight saving time in 2017, two years after it was reintroduced. Japan, which lies within one time zone, also does not modify its legal time during the summer months. Samoa scrapped DST in 2021, after adopting it in 2010.

Many countries in the Southern Hemisphere maintain daylight saving time generally from Oct. to Mar. (Brazil, mostly south of the equator, scrapped daylight saving time in 2019.) However, most countries near the equator do not deviate from standard time.

WEIGHTS AND MEASURES

Source: National Institute of Standards and Technology (NIST), U.S.
Dept. of Commerce

International System of Units (SI)

Two systems of weights and measures coexist in the U.S. today: the **U.S. Customary System** and the **International System of Units** (SI, for *Système International d'Unités*). The SI is a more complete, coherent version of the **metric system**. Throughout U.S. history, the customary system—parts of which were inherited but are now different from the British Imperial System—has been generally used. Federal and state legislation gave it, through implication, standing as the primary weights and measures system. The metric system, however, is the only system that Congress has ever specifically sanctioned, dating back to an 1866 law. The U.S. was one of the original 17 countries to sign the International Metric Convention (or Treaty of the Meter) May 20, 1875, which established several intergovernmental organizations to oversee and refine the SI. The U.S. is represented at these organizations by the Natl. Institute of Standards and Technology (NIST).

Since that time, use of the metric system in the U.S. has slowly increased, particularly in the scientific community, the pharmaceutical industry, and the manufacturing sector—the last motivated by the predominant use of the metric system in international commerce.

On Dec. 23, 1975, Pres. Gerald R. Ford signed the Metric Conversion Act of 1975. It defined the “metric system of measurement” as the SI, as established in 1960 by the General Conference on Weights and Measures and interpreted in the U.S. by the secretary of commerce, who delegated that authority to the director of the NIST. The Trade and Competitiveness Act of 1988 declared the metric system the preferred system of weights and measures for U.S. trade and commerce, but explicitly permitted “the

continued use of traditional systems of weights and measures in nonbusiness activities.” The Code of Federal Regulations made the use of metric units mandatory for federal agencies in 1991. However, the metric system has not yet become the system of choice for most Americans’ daily use.

The following are the seven base SI units: **length**—meter; **mass**—kilogram; **time**—second; **electric current**—ampere; **thermodynamic temperature**—kelvin; **amount of substance**—mole; and **luminous intensity**—candela. All seven were redefined as of May 20, 2019, to emphasize the dependence of base unit definitions on physical constants with fixed numerical values and on the other base units

Frequently Used Conversions

Boldface indicates exact values. For greater accuracy, use the “multiply by” number in parentheses. For weights, avoirdupois (avdp) weight is the system applied to all goods except medicines, precious metals, and precious stones.

U.S. Customary to Metric

	If you have:	Multiply by:	To get:
Length	inches	25.4	millimeters
	inches	2.54	centimeters
	inches	0.0254	meters

(1) Survey mile. (2) A short ton is 2,000 pounds. (3) A long ton is 2,240 pounds.

Temperature Conversions

The left-hand column below gives a temperature according to the **Celsius** scale, and the right-hand gives the same temperature according to the **Fahrenheit** scale. The lowest number on each scale is equivalent to absolute zero, the theoretical temperature at which all molecular motion would stop.

For temperatures not shown: To convert Fahrenheit to Celsius, subtract 32 degrees and divide by 1.8; to convert Celsius to Fahrenheit, multiply by 1.8 and add 32 degrees.

Celsius	Fahrenheit
-273.15	-459.67
-250	-418
-200	-328
-184.4	-300
-156.7	-250

100	212
121.1	250
148.9	300
150	302
200	392
300	572

Note: Although the term *centigrade* is still frequently used, the International Committee on Weights and Measures and the National Institute of Standards and Technology have recommended since 1948 that this scale be called *Celsius*.

Boiling and Freezing Points

Water boils at 212°F (100°C) at sea level. For every 550 feet above sea level, the boiling point of water is lower by about 1°F. Methyl alcohol (wood alcohol) boils at 148.5°F. Average human oral temperature is 98.6°F. **Water freezes** at 32°F (0°C).

Selected Geometric Formulas

The value of π (the Greek letter pi) is approximately 3.14159265 (equal to the ratio of the circumference of a circle to its diameter). The equivalence is typically rounded further to 3.1416 or 3.14.

Calculating Circumference

Circle: Multiply the diameter by π .

Calculating Area

Circle: Multiply the square of the radius (equal to $\frac{1}{2}$ the diameter) by π .

Rectangle: Multiply the length of the base by the height.

Sphere (surface): Multiply the square of the radius by π and multiply by 4.

Square: Square the length of one side.

Trapezoid: Add the length of the two parallel sides, multiply by the height, and divide by 2.

Triangle: Multiply the base by the height and divide by 2.

Calculating Volume

Cone: Multiply the square of the radius of the base by π , multiply by the height, and divide by 3.

Cube: Cube the length of one edge.

Cylinder: Multiply the square of the radius of the base by π and multiply by the height.

Pyramid: Multiply the area of the base by the height and divide by 3.

Rectangular prism: Multiply the length by the width by the height.

Sphere: Multiply the cube of the radius by π , multiply by 4, and divide by 3.

Playing Cards and Dice Chances

5-Card Poker Hands

Metric System Prefixes

The following prefixes, in combination with the basic unit names, provide the multiples and submultiples in the metric system. For example, the unit name *meter*, with the prefix *kilo* added, produces *kilometer*, meaning “1,000 meters.”

Prefix	Symbol	Multiples	Equivalent
yotta	Y	10 ²⁴	septillionfold
zetta	Z	10 ²¹	sextillionfold
exa	E	10 ¹⁸	quintillionfold
peta	P	10 ¹⁵	quadrillionfold

tera	T	10^{12}	trillionfold
giga	G	10^9	billionfold
mega	M	10^6	millionfold
kilo	k	10^3	thousandfold
hecto	h	10^2	hundredfold
deka	da	10^1	tenfold
deci	d	10^{-1}	tenth part
centi	c	10^{-2}	hundredth part
milli	m	10^{-3}	thousandth part
micro	μ	10^{-6}	millionth part
nano	n	10^{-9}	billionth part
pico	p	10^{-12}	trillionth part
femto	f	10^{-15}	quadrillionth part
atto	a	10^{-18}	quintillionth part
zepto	z	10^{-21}	sextillionth part
yocto	y	10^{-24}	septillionth part

Weight and Measurement Equivalents

In this table, there is a distinction between the international foot and the survey foot. The international foot, defined in 1959 as exactly equal to 0.3048 meter, is shorter than the survey foot by exactly 2 parts in 1 million. This means that an international mile is about $\frac{1}{8}$ inch shorter than the survey mile. The survey foot is still used in the publication of some geodetic surveys within the U.S., but the NIST planned to discourage its use for any purposes after Jan. 1, 2023. In this table, the survey foot is indicated with capital letters, as FEET.

When the name of a unit is enclosed in brackets, e.g., [1 hand], either (1) the unit is not in general current use in the U.S. or (2) the unit is believed to be based on custom and usage rather than on formal definition.

Equivalents involving decimals are, in most instances, rounded to the third decimal place; exact equivalents are so designated.

Lengths

1 angstrom (Å)

= 0.1 nanometer (exactly)

	= 0.0001 micrometer (exactly)
	= 0.0000001 millimeter (exactly)
	= 0.000000004 inch
1 cable's length	= 120 fathoms (exactly)
	= 720 FEET (exactly)
	= 219 meters
1 centimeter (cm)	= 0.3937 inch
1 chain (ch) (engineer's)	= 30.48 meters (exactly)
	= 100 feet
1 chain (Gunter's or surveyor's)	= 66 FEET (exactly)
	= 20.1168 meters
1 decimeter (dm)	= 3.937 inches
1 degree (geographical)	= 364,566.929 feet
	= 69.047 miles (avg.)
	= 111.123 kilometers (avg.)
of latitude	= 68.708 miles at equator
	= 69.403 miles at poles
of longitude	= 69.171 miles at equator
1 dekameter (dam)	= 32.808 feet
1 fathom (fath)	= 6 FEET (exactly)
	= 1.8288 meters
1 foot (ft)	= 12 inches (exactly)
	= 0.3048 meters (exactly)
	= 0.015 chains (surveyor's)
1 furlong (fur)	= 660 FEET (exactly)
	= $\frac{1}{8}$ survey mile (exactly)
	= 201.168 meters
[1 hand (height measure for horses, from ground to top of their shoulders)]	= 4 inches
1 inch (in.)	= 2.54 centimeters (exactly)
1 kilometer (km)	= 0.621371 mile
	= 3,280.8 feet
1 league (land)	= 3 survey miles (exactly)
	= 4.828 kilometers
1 link (engineer's)	= 1 foot
	= 0.305 meter
1 link (Gunter's or surveyor's)	= 7.92 inches (exactly)
	= 0.201 meter

1 meter (m)	= 39.37 inches
	= 1.09361 yards
1 micrometer (μm)	= 0.001 millimeter (exactly)
	= 0.00003937 inch
1 mil	= 0.001 inch (exactly)
	= 0.0254 millimeter (exactly)
1 mile (mi) (statute or land)	= 5,280 FEET (exactly)
	= 1.609344 kilometers (exactly)
1 mile (nmi) (international nautical)	= 1.852 kilometers (exactly)
	= 1.151 miles
	= 6,076.1 feet
1 millimeter (mm)	= 0.03937 inch
1 nanometer (nm)	= 0.001 micrometer (exactly)
	= 0.00000003937 inch
1 pica (typography)	= 12 points
1 point (pt) (typography)	= 0.013837 inch (exactly)
	= 0.351 millimeter
1 rod (rd), pole, or perch	= 16 ½ FEET (exactly)
	= 5.029 meters
1 yard (yd)	= 3 feet (exactly)
	= 0.9144 meter (exactly)

Areas or Surfaces

1 acre (A)	= 43,560 square FEET (exactly)
	= 4,840 square yards
	= 0.405 hectare
1 are (a)	= 119.599 square yards
	= 0.025 acre
1 bolt (cloth measure):	
length	= 100 yards
width	= 45 or 60 inches
1 hectare (ha)	= 2.471 acres
[1 square (building)]	= 100 square feet
1 square centimeter (cm ²)	= 0.155 square inch
1 square decimeter (dm ²)	= 15.500 square inches
1 square foot (ft ²)	= 929.030 square centimeters
1 square inch (in. ²)	= 6.4516 square centimeters (exactly)

1 square kilometer (km ²)	= 247.104 acres
	= 0.386102 square mile
1 square meter (m ²)	= 1.196 square yards
	= 10.764 square feet
1 square mile (mi ²)	= 640 acres (exactly)
	= 258.999 hectares
1 square millimeter (mm ²)	= 0.002 square inch
1 square rod (rd ²), square pole, or square perch	= 25.293 square meters
1 square yard (yd ²)	= 0.836127 square meter

Capacities or Volumes

1 barrel (bbl), liquid	= 31 to 42 gallons*
------------------------	---------------------

*There are a variety of “barrels” established by law or usage. For example, federal taxes on fermented liquors are based on a barrel of 31 gallons. Many state laws fix the “barrel for liquids” as 31 ½ gallons; one state fixes a 36-gallon barrel for cistern measurement. Federal law recognizes a 40-gallon barrel for “proof spirits.” By custom, 42 gallons constitute a barrel of crude oil or petroleum products for statistical purposes, and this equivalent is recognized “for liquids” by some states.

1 barrel (bbl), standard for fruits, vegetables, and other dry commodities except dry cranberries	= 7,056 cubic inches
	= 105 dry quarts
	= 3.281 bushels, struck measure
1 barrel, standard, cranberry	= 86 ⁴⁵ / ₆₄ dry quarts
	= 2.709 bushels, struck measure
	= 5,826 cubic inches
1 board foot (lumber measure)	= a foot-square board 1 inch thick
1 bushel (U.S.) (struck measure)	= 2,150.42 cubic inches (exactly)
	= 35.239 liters
[1 bushel, heaped (U.S.)]	= 2,747.715 cubic inches
	= 1.278 bushels, struck measure**

**Frequently recognized as 1 ¼ bushels, struck measure.

[1 bushel (bu) (British Imperial) (struck measure)]	= 1.032 U.S. bushels, struck measure
	= 2,219.36 cubic inches
1 cord (cd) (firewood)	= 128 cubic feet (exactly)
1 cubic centimeter (cm ³)	= 0.061 cubic inch
1 cubic decimeter (dm ³)	= 61.024 cubic inches

1 cubic foot (ft ³)	= 7.481 gallons
	= 28.317 cubic decimeters
1 cubic inch (in. ³)	= 0.554 fluid ounce
	= 4.433 fluid drams
	= 16.387 cubic centimeters
1 cubic meter (m ³)	= 1.308 cubic yards
1 cubic yard (yd ³)	= 0.765 cubic meter
1 cup, measuring	= 8 fluid ounces (exactly)
	= ½ liquid pint (exactly)
1 dekaliter (daL)	= 2.642 gallons
	= 1.135 pecks
[1 dram, fluid (fl dr) (British)]	= 0.961 U.S. fluid dram
	= 0.217 cubic inch
	= 3.552 milliliters
1 gallon (gal) (U.S.)	= 4 quarts, liquid (exactly)
	= 231 cubic inches (exactly)
	= 3.785 liters
	= 0.833 British gallon
	= 128 U.S. fluid ounces (exactly)
[1 gallon (British Imperial)]	= 277.42 cubic inches
	= 1.201 U.S. gallons
	= 4.546 liters
	= 160 British fluid ounces (exactly)
1 gill (gi)	= 7.219 cubic inches
	= 4 fluid ounces (exactly)
	= 0.118 liter
1 hectoliter (hL)	= 26.418 gallons
	= 2.838 bushels
1 liter (L) (1 cubic decimeter exactly)	= 1.057 liquid quarts
	= 0.908 dry quart
	= 61.024 cubic inches
1 milliliter (mL) (1 cu cm exactly)	= 0.271 fluid dram
	= 16.231 minims
	= 0.061 cubic inch
1 ounce, liquid (U.S.)	= 1.805 cubic inches
	= 29.573 milliliters
	= 1.041 British fluid ounces

[1 ounce, fluid (fl oz) (British)]	= 0.961 U.S. fluid ounce = 1.734 cubic inches = 28.412 milliliters
1 peck (pk)	= 8.810 liters
1 pint (pt), dry	= 33.600 cubic inches = 0.551 liter
1 pint, liquid	= 28.875 cubic inches (exactly) = 0.473 liter
1 quart (qt), dry (U.S.)	= 67.201 cubic inches = 1.101 liters = 0.969 British quart
1 quart, liquid (U.S.)	= 2 pints, liquid (exactly) = 4 cups (exactly) = 57.75 cubic inches (exactly) = 0.946 liter = 0.833 British quart
[1 quart (British)]	= 69.354 cubic inches = 1.032 U.S. dry quarts = 1.201 U.S. liquid quarts
1 tablespoon (T., Tbs, tbsp.)	= 3 teaspoons (exactly) = 4 fluid drams = ½ fluid ounce (exactly)
1 teaspoon (t., tsp.)	= ⅓ tablespoon (exactly) = 1 ⅓ fluid drams***

***The equivalent “1 teaspoon = 1 ⅓ fluid drams” has been found to correspond more closely with the actual capacities of teaspoons in use than the equivalent “1 teaspoon = 1 fluid dram” given by many dictionaries.

Weights or Masses

1 assay ton* (AT) = 29.167 grams

*Used in assaying. The assay ton bears the same relation to the milligram that a ton of 2,000 pounds avoirdupois bears to the ounce troy; hence, the weight in milligrams of precious metal obtained from one assay ton of ore gives directly the number of troy ounces to the net ton.

1 carat (c)	= 200 milligrams (exactly) = 3.086 grains
1 dram avoirdupois (dr avdp)	= 27 11/32 (= 27.344) grains = 1.772 grams

1 gamma (γ)	= 1 microgram (exactly)
1 grain (gr)	= 64.79891 milligrams (exactly)
1 gram (g)	= 15.432 grains
	= 0.035 ounce, avoirdupois
1 hundredweight, gross (or long)** (gross cwt)	= 112 pounds (exactly)
	= 50.802 kilograms
**The gross (or long) ton and hundredweight are used commercially in the U.S. to only a limited extent, usually in restricted industrial fields. These units are the same as the British ton and hundredweight.	
1 hundredweight, gross or short (cwt or net cwt)	= 100 pounds (exactly)
	= 45.359 kilograms
1 kilogram (kg)	= 2.20462 pounds
1 microgram (μg)	= 0.000001 gram (exactly)
1 milligram (mg)	= 0.015 grain
1 ounce, avoirdupois (oz avdp)	= 437.5 grains (exactly)
	= 0.911 troy ounce
	= 28.3495 grams
1 ounce, troy (oz t)	= 480 grains (exactly)
	= 1.097 avoirdupois ounces
	= 31.103 grams
1 pennyweight (dwt)	= 1.555 grams
1 pound, avoirdupois (lb avdp)	= 7,000 grains (exactly)
	= 1.215 troy pounds
	= 453.59237 grams (exactly)
1 pound, troy (lb t)	= 5,760 grains (exactly)
	= 0.823 avoirdupois pound
	= 373.242 grams
1 stone (st)	= 14 pounds avdp (exactly)
	= 6.350 kilograms
1 ton, gross or long	= 2,240 pounds (exactly)
	= 1.12 net tons (exactly)
	= 1.016 metric tons
1 ton, metric (t)	= 2,204.623 pounds
	= 0.984 gross ton
	= 1.102 net tons
1 ton, net or short (tn)	= 2,000 pounds (exactly)

= 0.893 gross ton
= 0.907 metric ton

Electrical Units

The **watt** (W) is the unit of power (electrical, mechanical, thermal). Electrical power is given by the product of the voltage and the current.

Energy is sold by the **joule** (J), but in common practice the billing of electrical energy is expressed in terms of the **kilowatt-hour** (kWh), which is 3,600,000 joules, or 3.6 megajoules.

The **horsepower** (hp) is a nonmetric unit sometimes used in mechanics. It is equal to 746 watts.

The **ohm** (Ω) is the unit of electrical resistance and represents the physical property of a conductor that offers a resistance to the flow of electricity, permitting just 1 ampere to flow at 1 volt of pressure.

Measures of Force and Pressure

Dyne (dyn) = force necessary to accelerate a 1-gram mass 1 centimeter per second squared = 0.000072 poundal

Poundal (pdl) = force necessary to accelerate a 1-pound mass 1 foot per second squared = 13,825.5 dynes = 0.138255 newton

Newton (N) = force needed to accelerate a 1-kilogram mass 1 meter per second squared = 100,000 dynes (exactly)

Pascal (pressure) (Pa) = 1 newton per square meter = 0.020885 pound per square foot

Atmosphere (air pressure at sea level) (atm) = 2,116.217 pounds per square foot = 14.6959 pounds per square inch = 1.0332 kilograms per square centimeter = 101,325 newtons per square meter

Measures of Alcohol

Pony	= 1.0 fluid ounce
Shot	= varies, usu. 1.0 - 1.5 fluid ounces
Jigger	= 1.5 fluid ounces

Pint (pt)	= 16 fluid ounces
	= 0.625 fifth
Fifth	= 25.6 fluid ounces
	= 1.6 pints
	= 0.8 quart
	= 0.757 liter
Quart (qt)	= 32 fluid ounces
	= 1.25 fifths
Wine bottle (standard)	= 0.75 liter
	= 25.4 fluid ounces
Magnum	= 1.5 liters
For champagne and brandy:	
Jeroboam	= 2 magnums
	= 3 liters
	= 101 fluid ounces
For champagne:	
Rehoboam	= 3 magnums
Methuselah	= 4 magnums
Salmanazar	= 6 magnums
Balthazar	= 8 magnums
Nebuchadnezzar	= 10 magnums

Miscellaneous Measures

Caliber (cal)—the diameter of a gun bore. In the U.S., caliber is traditionally expressed in hundredths of inches, e.g., .22. In Britain, caliber is often expressed in thousandths of inches, e.g., .270. Now it is commonly expressed in millimeters, e.g., the 5.56 mm M16 rifle. The caliber of heavier weapons has long been expressed in millimeters, e.g., the 155 mm howitzer.

Naval guns' caliber refers to the barrel length as a multiple of the bore diameter. For example, a 5-inch, 50-caliber naval gun has a 5-inch bore and a barrel length of 250 inches.

Decibel (dB)—a measure of the relative intensity of sound. The threshold of hearing is given as 0 decibels. A 20-decibel sound is 10 times more intense than a 10-decibel sound; 30 decibels is 100

times more intense. (A 10-decibel increase corresponds generally to the perception of a sound being twice as loud.)

One decibel is the smallest difference between sounds detectable by the human ear. Long or repeated exposure to an 85-decibel-or-higher sound can damage hearing.

10 decibels	breathing
20	rustling leaves
30	whisper
40	refrigerator humming
50	quiet conversation
60	conversation, laughter
70	vacuum cleaner
80	city traffic
90	subway, lawn mower
100	chainsaw

Em—a printer’s measure designating the width of any given type size. For example, an em of 10-point type is 10 points. An en is half an em.

Gauge (ga)—the diameter of a shotgun bore. Gauge numbers originally referred to the number of lead balls—of equal diameter as the gun barrel—required to make a pound. Thus, a 16-gauge shotgun’s bore was smaller than a 12-gauge shotgun’s. Today, an international agreement assigns millimeter measures to each gauge.

Gauge	Bore diameter (mm)
6	23.34
10	19.67
12	18.52
14	17.60
16	16.81
20	15.90

Horsepower (hp)—the power needed to lift 550 pounds 1 foot in 1 second or to lift 33,000 pounds 1 foot in 1 minute. Equivalent to 746 watts or 2,546 British thermal units per hour.

Karat or carat (k or c)—a measure of fineness for gold equal to $\frac{1}{24}$ part of pure gold in an alloy. 24-karat gold is pure; 18-karat gold

is $\frac{1}{4}$ alloy. The carat is also used as a unit of weight for precious stones; it is equal to 200 milligrams or 3.086 grains.

Knot (kn or kt)—a measure of the speed of ships. A knot equals 1 nautical mile (about 1.151 statute miles) per hour.

Quire (qr)—25 sheets of paper of the same size and quality.

Ream (rm)—500 sheets of paper of the same size and quality.

POSTAL INFORMATION

Administration of the U.S. Postal Service

The Postal Reorganization Act, creating a government-owned postal service under the executive branch and replacing the old executive Post Office Department, was signed into law Aug. 12, 1970. The service officially came into being on July 1, 1971. The U.S. Postal Service is governed by an 11-person board. Nine members are appointed by the president, with Senate approval. These nine choose a postmaster general. The board and the postmaster general choose the 11th member, who serves as deputy postmaster general.

The Postal Service Reform Act of 2022 was signed into law Apr. 6, 2022, altering budget requirements imposed by 2006 legislation and eliminating a provision requiring USPS to pre-fund retiree benefits for 50 years, which had incurred massive annual deficits. (The Postal Service last received a public service subsidy, i.e., taxpayer dollars, in 1982.)

Historical Postage Rates, 1851-2022

Postage cost for a prepaid, 1-oz. letter (the first-class standard after July 1, 1885).

Effective date	Rate	2022 dollars
July 1, 1851	\$0.06 ¹	\$2.37

U.S. Domestic Mail Rates

Source: *Price List* (Notice 123), U.S. Postal Service. Effective July. 10, 2022. Rates are for retail customers unless noted. Domestic rates apply to the U.S., its territories and possessions, APOs, FPOs, and Freely Associated States.

First-Class Mail

Includes written matter such as letters, postcards, bills, account statements, and any matter sealed or closed against inspection up to 13 oz. In most cases, delivery is within 2-3 business days.

Letters measuring up to 6 $\frac{1}{8}$ by 11 $\frac{1}{2}$ in. and not more than $\frac{1}{4}$ in. thick cost 60¢ for the first oz., 24¢ for each additional oz. or fraction thereof, up to 3.5 oz. Nonmachinable letters (such as those in square, oversized, or unusually shaped envelopes) start at 99¢. Postcard postage is 44¢. Large envelopes up to 12 by 15 in. (or letters over 3.5 oz.) cost \$1.20 for the first oz. and 24¢ for each additional oz. or fraction thereof. Presort- and automation-compatible mail can qualify for lower rates if certain piece minimums, mailing permits, and other requirements are met.

Forever Stamps. The USPS introduced the nondenominational “Forever” stamp Apr. 12, 2007, at an initial cost of 41¢. The Forever stamp can be purchased at the current First-Class standard rate and will always be valid as First-Class postage on standard envelopes weighing 1 oz. or less, even after rates increase.

Priority Mail

Priority Mail is delivered within 1-3 business days in most cases, with no additional charge for Saturday deliveries. Can be any mailable article up to 70 lbs and not over 108 in. in length and girth combined.

Priority Mail Flat Rate: \$8.95, \$9.25, \$9.65, regardless of weight, if matter fits into designated USPS flat-rate envelopes. \$9.45, \$16.10, \$21.50 if it fits into flat-rate boxes.

Priority Mail Forever Prepaid Flat Rate packaging can be purchased online at the current priority mail flat rate and remains valid for use after future price increases.

Priority Mail Express

Provides guaranteed expedited service for any mailable article up to 70 lbs and not over 108 in. in combined length and girth. Offers next-day delivery to most destinations; \$12.50 additional charge for Sunday or holiday delivery. Includes insurance up to \$100, mailing receipt, proof of delivery signature record, and tracking.

Priority Mail Express Flat Rate: \$26.95 \$27.10, \$27.50, regardless of weight, if matter fits into designated USPS flat-rate envelopes.

Domestic Mail Services and Fees

Adult signature required: \$8.50 per piece; person 21 years of age or older must sign for shipment.

Adult signature restricted delivery: \$8.50 per piece; specific addressee or agent 21 years of age or older must sign for shipment.

Certificate of mailing: \$1.75 per piece.

Certified mail: \$4.00 per piece; provides proof of mailing and electronic verification of delivery or delivery attempt.

Certified mail restricted delivery: \$10.35 per piece.

Collect on delivery (COD): \$9.20 for amount to be collected/insurance desired up to \$50; \$11.40 for \$50.01-\$100; \$2.50 for each additional \$100.

Domestic money order: \$1.65 for money orders \$0.01 to \$500; \$2.20 for \$500.01 to \$1,000.

Pickup on demand: \$25.00 per pickup; available for Priority Mail, Priority Mail Express, and USPS Retail Ground.

Restricted delivery: \$6.25 per item when purchased in combination with COD, Insured Mail, or Registered Mail.

Return receipt: If requested at time of mailing, \$3.25 for a receipt by mail, \$2.00 for email receipt.

Signature confirmation: \$3.10 online, \$3.65 at post office.

Sunday/holiday delivery: Available for Priority Mail Express only. Fee: \$12.50.

Tracking

Formerly known as Delivery Confirmation, tracking can be used with First-Class Mail parcels, Priority Mail, USPS Retail Ground, and Package Services (Bound Printed Matter, Media Mail, and Library Mail). Available free of charge at time of mailing, except for USPS Marketing Mail parcels (\$0.26).

Change of Address

The USPS will forward mail to another address provided a Change of Address (COA) form has been filed in person or mailed to a post office or submitted online at moversguide.usps.com (\$1.10 credit card authentication fee). The form can be picked up at any post office or requested by phone at (800) ASK-USPS.

P.O. Box Service

Private P.O. boxes can be rented in five sizes at most post offices. Prices depend on box size and location, ranging from \$16.00-\$345.00 per 3-month period or \$26.00-\$600.00 per 6-month period. Keys at most locations require a \$5.00 deposit.

Registered Mail

The most secure service provided by the USPS. Full value of item must be declared at time of registration and mailing. Fee: \$14.65 for a declared value of \$0, up to \$27.30 for articles with a declared value of \$4,000.01 to \$5,000. For each additional \$1,000 or fraction thereof above \$5,000, add \$1.95.

International Mail Rates

Source: *Price List* (Notice 123), U.S. Postal Service. Effective July 10, 2022. Refer to www.usps.com for USPS price groups not shown here and weight limits by country.

First-Class Mail International

Letter-post items weighing up to 1 oz. and single postcards can be sent airmail for \$1.40 to all countries.

Priority Mail International

Delivery is in 6-10 business days in many markets. Items must not be more than 108 in. in length and girth combined; max. weight is 70 lbs, though the limit varies by country.

Priority Mail International Flat Rate: \$29.60 to Canada, \$36.85-\$42.15 to all other countries if matter fits into designated USPS flat-rate envelope (max. weight 4 lbs). Flat-rate boxes are \$30.70-\$73.80 to Canada, \$38.55-\$122.65 to all other countries.

Priority Mail Express International

Priority Mail Express International Flat Rate: \$47.95 to Canada, \$64.95-\$72.50 to all other countries if matter fits into flat-rate envelope (max. weight 4 lbs).

Global Express Guaranteed

Provides international expedited delivery, in partnership with FedEx, to certain countries. Item to be mailed must not weigh more than 70 lbs nor measure more than 108 in. in combined length and girth. Rate: Starts at \$67.80 and \$75.50 to Canada and Mexico, respectively, up to \$148.25 to countries in price group 4, for items not over 0.5 lb in weight.

International Mail Services and Fees

Business reply: Card: \$1.90; envelope (up to 2 oz.): \$2.40.

Customs clearance and delivery: \$7.50 per inbound letters and flats.

Insurance: Available to many countries for loss of or damage to items. Consult USPS for each country's indemnity limits.

Registered mail: Fee: \$18.25 per mail piece; \$17.15 per package piece.

Return receipt: Shows to whom and when item is delivered. Fee: \$5.05 per mail piece; \$4.75 per package piece.

Postal money order: \$49.65 per money order. Only accepted in certain countries.

SOCIAL SECURITY AND MEDICARE

Social Security Coverage

Source: Social Security Administration; World Almanac research; provisions shown are as under current law, Sept. 2022.

Social Security Benefits

Social Security's **Old-Age, Survivors, and Disability Insurance (OASDI)** program benefits are based on a worker's **primary insurance amount (PIA)**, which is related by law to the average indexed monthly earnings (AIME) on which Social Security contributions have been paid. The full PIA is payable to a worker who retires at full retirement age (FRA), which is 65-67 depending on birth year, and to an entitled disabled worker at any age. Spouses and children of retired or disabled workers and survivors of deceased workers receive set proportions of the PIA subject to a family maximum amount. The PIA is calculated by applying varying percentages to succeeding parts of the AIME. The formula is adjusted annually to reflect changes in average annual wages.

Increases in Social Security benefits are initiated for December of each year, assuming the Consumer Price Index (CPI) for the third calendar quarter of the year increased relative to the base quarter (i.e., the third calendar quarter of the year in which an increase last took effect). The size of the benefit increase is determined by the percentage rise of the CPI between the quarters measured.

The **average monthly benefit** payable to all retired workers amounted to \$1,658 in Dec. 2021. The average benefit for disabled workers in that month was \$1,358.

Maximum Monthly Retired-Worker Benefits Payable to Individuals Who Retired at Full Retirement Age (FRA)

Retirement year ¹	Maximum benefit—	
	Payable at retirement	Payable effective Dec. 2021
1990	\$975	\$2,120
1995	1,199	2,197

Maximum Monthly Retired-Worker Benefits Payable to Individuals Who Retired at Full Retirement Age (FRA)

Retirement year ¹	Maximum benefit—	
	Payable at retirement	Payable effective Dec. 2021
2000	1,435	2,350
2005	1,939	2,812
2010	2,346	2,925
2011	2,366	2,949
2012	2,513	3,024
2013	2,533	2,997
2014	2,642	3,080
2015	2,663	3,053
2016	2,639	3,025
2017	2,687	3,070
2018	2,788	3,124
2019	2,861	3,118
2020	3,011	3,230
2021	3,148	3,333
2022	3,345	3,345

(1) Benefits in 2000 and earlier are for retirement at age 65 at beginning of a given year. Benefits in years 2005 through 2008 were for starting benefits at exact FRA during the year. Benefits in years 2009 through 2020 are for retirement at age 66 at beginning of year. Benefits in years 2021 and 2022 are for starting benefits at exact FRA during the year.

Amount of Work Required

To qualify for benefits, the worker generally must have worked a certain length of time in covered employment. Just how long depends on when the worker reaches age 62 or, if earlier, when he or she dies or becomes disabled. A person born after 1929 who dies, becomes disabled, or reaches 62 after 1991 must generally have had at least 10 years of work credit to qualify for benefits.

Contribution and Benefit Base

(annual limit on the amount of earnings subject to taxation under OASDI)

Calendar year	OASDI ¹
1995	\$61,200
2000	76,200
2001	80,400

2002	84,900
2003	87,000
2004	87,900
2005	90,000
2006	94,200
2007	97,500
2008	102,000
2009	106,800
2010	106,800
2011	106,800
2012	110,100
2013	113,700
2014	117,000
2015	118,500
2016	118,500
2017	127,200
2018	128,400
2019	132,900
2020	137,700
2021	142,800
2022	147,000

(1) Old-Age, Survivors, and Disability Insurance.

A person is **fully insured** when he or she has one quarter of coverage for every year after age 21 is reached (or 1950, if later) up to but not including the year the worker reaches 62, dies, or becomes disabled. In 2022, a person earns one credit, or “quarter of coverage” for each \$1,510 of annual earnings in covered employment, up to four quarters per year.

To receive **disability benefits**, the worker, in addition to being fully insured, must generally have credit for 20 quarters of coverage out of the 40 calendar quarters before he or she became disabled. A disabled blind worker need meet only the fully insured requirement. Persons disabled before age 31 can qualify with a briefer period of coverage. Certain survivor benefits are payable if the deceased worker had 6 quarters of coverage in the 13 quarters preceding death.

Tax Rate Schedule

(percentage of covered earnings)

Year	Total (for employees and employers, each)	OASDI¹	HI²
1979-80	6.13%	5.08%	1.05%
1981	6.65	5.35	1.30
1982-83	6.70	5.40	1.30
1984	7.00	5.70	1.30
1985	7.05	5.70	1.35
1986-87	7.15	5.70	1.45
1988-89	7.51	6.06	1.45
1990 and after ³	7.65	6.20	1.45
Year	(for self-employed)		
1979-80	8.10%	7.05%	1.05%
1981	9.30	8.00	1.30
1982-83	9.35	8.05	1.30
1984	14.00	11.40	2.60
1985	14.10	11.40	2.70
1986-87	14.30	11.40	2.90
1988-89	15.02	12.12	2.90
1990 and after ³	15.30	12.40	2.90

(1) Old-Age, Survivors, and Disability Insurance. (2) Hospital Insurance (Medicare). (3) Public Law (PL) 111-147 exempted most employers from paying the employer share of OASDI payroll tax on wages paid Mar. 19-Dec. 31, 2010, to certain qualified individuals hired after Feb. 3, 2010. PL 111-312 reduced the OASDI payroll tax rate for 2011 by 2 percentage points for employees and for self-employed workers. PL 112-96 extended the 2011 rate reduction through 2012. The laws required that the general fund of the Treasury reimburse the OASI and DI Trust Funds for these temporary reductions.

What Aged Workers Receive

A person may receive monthly old-age benefits when he or she has enough work in covered employment and has reached retirement age—age 62 for reduced benefits or the age below for full benefits.

Full Retirement Age (FRA) by Birth Year

Year of birth	FRA
1937 or earlier	65

1938	65 and 2 mos.
1939	65 and 4 mos.
1940	65 and 6 mos.
1941	65 and 8 mos.
1942	65 and 10 mos.
1943-54	66
1955	66 and 2 mos.
1956	66 and 4 mos.
1957	66 and 6 mos.
1958	66 and 8 mos.
1959	66 and 10 mos.
1960 or later	67

Note: If born on Jan. 1, refer to the previous birth year.

In 2000, the retirement earnings test was eliminated beginning with the month when the beneficiary reaches **full retirement age (FRA)**. A person at or above FRA no longer receives reduced benefits because of earnings. However, a person's benefits are reduced \$1 for every \$3 of earnings above the limit allowed by law (\$51,960 for 2022) if he or she retires in the same calendar year but months prior to FRA. For retirees who have not yet attained FRA, the reduction is \$1 for every \$2 of earnings over the exempt amount (\$19,560 for 2022).

For workers who reached age 65 between 1982 and 1989, Social Security benefits are raised by 3% for each year in which the worker did not receive benefits between FRA and 70 (72 before 1984), whether because of earnings from work, because the worker did not apply for benefits, or because the worker declined benefits after entitlement. The **delayed retirement credit** is 1% per year for workers who reached age 65 before 1982. The rate for workers who reached age 65 in 1998-99 is 5.5%; 2000-01, 6.0%; 2002-03, 6.5%; 2004-05, 7.0%; and 2006-07, 7.5%. The delayed retirement credit rose to 8% per year for 2008 and years after.

For workers retiring early, benefits are permanently reduced 5/9 of 1% for each month before the FRA, up to 36 months. If the

number of months exceeds 36, then the benefit is further reduced $\frac{5}{12}$ of 1% per month.

For example, workers who retire at exactly age 62 have a total of 60 months of reduction if their FRA is 67. The reduction for the first 36 months is $\frac{5}{9}$ of 36%, or 20%. The reduction for the remaining 24 months is $\frac{5}{12}$ of 24%, or 10%. These workers would see their benefits reduced by 30% by retiring early. The nearer to FRA a person is when he or she begins collecting a benefit, the larger the monthly benefit will be.

Benefits for Worker's Spouse

The spouse of a worker who is getting Social Security retirement or disability payments may become entitled to an insurance benefit of **one-half of the worker's PIA** if claiming benefits at full retirement age. Reduced spouse's benefits are available at age 62 and are permanently reduced $\frac{25}{36}$ of 1% for each month before FRA, up to 36 months. If the number of months exceeds 36, then the benefit is further reduced $\frac{5}{12}$ of 1% per month. Benefits are also payable to the aged divorced spouse of an insured worker if he or she was married to the worker for at least 10 years. To qualify for divorced spouse benefits, the insured worker does not have to be receiving benefits if the divorce occurred at least two years earlier. Benefits received as a spouse are reduced by the amount of one's PIA.

Benefits for Children of Workers

If a retired or disabled worker has a child under age 18, the **child** will usually get a benefit equal to **one-half of the worker's unreduced benefit**. So will the worker's spouse, regardless of age, if he or she is **caring for an entitled child** of the worker, and the child is under 16 or became disabled before age 22. However, total benefits paid on a worker's earnings record are subject to a family maximum. Total monthly benefits paid to the family of a worker who retired in 2022 at age 66 and 4 months and always had the maximum earnings creditable under Social Security cannot exceed \$5,821.

Entitled children generally stop receiving benefits at age 18, though they can continue receiving benefits until age 19 if they attend elementary or secondary school full-time. A child disabled before age 22 may get a benefit as long as the disability meets the definition in the law.

Benefits may also be paid to a grandchild or step-grandchild of a worker or of his or her spouse, in special circumstances.

OASDI Beneficiaries				
Beneficiaries	May 2010	May 2020	May 2021	May 2022
Total (in thous.)¹	53,349	64,697	65,068	65,650
Age 65 and over, total	36,914	49,199	50,137	51,258
Retired workers	30,734	43,034	44,056	45,248
Disabled workers	339	550	638	735
Survivors/dependents	5,841	5,615	5,443	5,275
Under age 65, total	16,435	15,497	14,931	14,393
Retired workers	3,314	2,699	2,592	2,553
Disabled workers	7,628	7,781	7,463	7,076
Survivors/dependents	5,492	5,017	4,876	4,763
Total monthly benefits (in mil)	\$56,966	\$89,936	\$93,095	\$101,081

OASDI = Old-Age, Survivors, and Disability Ins. (1) Numbers may not add up to totals due to rounding or incomplete enumeration.

What Disabled Workers Receive

A worker who becomes unable to work may be eligible for a monthly disability benefit. Benefits continue until it is determined that the individual is no longer disabled. When a disabled-worker beneficiary reaches FRA (66 years for workers born 1943-54, 66 years and 2 months for workers born in 1955, and 66 and 4 months for workers born in 1956), the disability benefit becomes a retired-worker benefit.

Benefits—like those for dependents of retired-worker beneficiaries generally—may be paid to dependents of disabled beneficiaries. However, the maximum family benefit in disability cases is generally lower than in retirement cases.

Survivor Benefits

If an insured worker should die, one or more types of benefits may be payable to survivors, again subject to a maximum family benefit described above.

1. If claiming benefits at FRA, the **surviving spouse** will receive a benefit equal to 100% of the deceased worker's benefit. Benefits claimed before FRA are reduced, with a maximum reduction of 28.5% at age 60. However, if the deceased worker claimed benefits before FRA, the surviving spouse's benefits are limited to the reduced amount the worker would be getting if alive, but not less than 82.5% of the worker's PIA. Remarriage after the worker's death ends the surviving spouse's benefit rights. However, if the widow(er) marries, and the marriage later ends, he or she regains benefit rights. (A marriage after age 60, or age 50 if disabled, is deemed not to have occurred for benefit purposes.) Survivor benefits may also be paid to a divorced spouse if the marriage lasted for at least 10 years.

Disabled widows and widowers may under certain circumstances qualify for benefits after attaining age 50 at the rate of 71.5% of the deceased worker's PIA. The widow or widower must have become totally disabled before or within seven years after the spouse's death or the last month in which he or she received mother's or father's insurance benefits.

2. There is a benefit for each **child under age 18**. The monthly benefit for a child of a deceased worker is $\frac{3}{4}$ of the PIA, subject to the family maximum. A child who became disabled before age 22 may also receive benefits. Also, a child can receive benefits until age 19 if he or she is in full-time attendance at an elementary or secondary school.

3. There is a **mother's or father's benefit** for the widow(er) if children of the worker who are under age 16 are in his or her care. The benefit is 75% of the PIA (subject to the family maximum), and it continues until the youngest child reaches age 16, at which time payments stop even if the child's benefit continues. Benefits may continue if the widow(er) has a disabled child beneficiary age 16 or over in his or her care.

4. Dependent parents may be eligible for benefits if they have been receiving at least half their support from the worker before his or her death, have reached age 62, and (except in certain circumstances) have not remarried since the worker's death. Each parent gets 75% of the worker's PIA; if only one parent survives, the benefit is 82% (could be reduced for the family maximum).

5. A lump sum cash payment of **\$255** is made if the worker was living with a spouse or has a child who is eligible for immediate monthly survivor benefits.

Self-Employed Workers

A self-employed person who has **net earnings of \$400 or more** in a year must report such earnings for Social Security tax and credit purposes. Income from real estate, savings, dividends, loans, pensions, or insurance policies are not included unless it is part of a person's business.

A self-employed person receives one quarter of coverage for each \$1,510 for 2022, up to a maximum of four quarters per year.

The nonfarm self-employed have the option of reporting their earnings as 2/3 of their gross income from self-employment. This option can be used only if actual net earnings from self-employment income are less than \$1,600 and less than 2/3 of their gross income. The option may be used only five times. Also, the self-employed person must have actual net earnings of \$400 or more in two of the three taxable years immediately preceding the year in which he or she uses the option.

When a person has both taxable wages and earnings from self-employment, wages are credited for Social Security purposes first; only as much self-employment income as brings total earnings up to the current taxable maximum becomes subject to the self-employment tax.

Farm Owners and Workers

Self-employed farmers whose gross annual earnings from farming are **\$8,460** or less may report 2/3 of their gross earnings instead of net earnings for Social Security purposes. Farmers whose

gross income is over \$8,460 and whose net farm profits were less than \$6,107 can report the smaller of 2/3 of gross farm income and \$5,640. Cash or crop shares received from a tenant or share farmer count if the owner participated materially in production or management. The self-employed farmer pays contributions at the same rate as other self-employed persons.

Agricultural employees. A worker's earnings from farm work count toward benefits if (1) the employer pays the worker \$150 or more in cash during the year or (2) the employer spends \$2,500 or more in the year for agricultural labor. Under these rules, a person gets credit for one calendar quarter for each \$1,510 in cash pay in 2022.

Foreign farm workers admitted to the U.S. on a temporary basis are not covered.

Household Workers

If an employer pays a household worker (e.g., cleaning person, cook, babysitter, nanny, gardener) who is age 18 or older **\$2,400 or more** in wages in 2022, the wages are covered under Social Security. This includes transportation costs paid for in cash. The job need not be regular or full-time. The employee should get a Social Security card at the Social Security office and show it to the employer. The employer deducts the amount of the employee's Social Security tax from the worker's pay, adds an identical amount as the employer's Social Security tax, and sends the total amount to the federal government.

Medicare Coverage

Source: Centers for Medicare & Medicaid Services, U.S. Dept. of Health and Human Services

The Medicare health insurance program provides acute-care coverage for Social Security and Railroad Retirement beneficiaries age 65 and over; workers and spouses age 65 and over with sufficient Medicare-only coverage in federal, state, or local government employment; certain persons entitled to receive Social Security or Railroad Retirement disability benefits; certain disabled persons with Medicare-only coverage through government employment; certain persons with end-stage kidney disease; and certain persons in the vicinity of Libby, MT, with asbestos-related conditions. What follows is a basic description that may not cover all circumstances.

The **basic Medicare plan**, available nationwide, is a fee-for-service arrangement where the beneficiary may use any provider accepting Medicare. Some services are not covered, and there are some out-of-pocket costs.

Hospital insurance (Part A). The basic hospital insurance program pays covered services for hospital and post-hospital care, including:

- All necessary inpatient hospital care for the first 60 days of each benefit period, except for a deductible (\$1,556 in 2022). For

days 61-90, Medicare pays for services over and above the coinsurance (\$389 per day in 2022). After 90 days, the beneficiary has 60 lifetime reserve days for which Medicare helps pay. The coinsurance amount for reserve days was \$778 in 2022.

- Up to 100 days of care in a skilled-nursing facility in each benefit period. Hospital insurance pays for all covered services for the first 20 days; for days 21-100, the beneficiary pays coinsurance (\$194.50 per day in 2022).
- Part-time home health care provided by nurses or other health workers.
- Limited coverage of hospice care for the terminally ill.

There is a premium for this insurance in certain—but not most—cases.

Medical insurance (Part B). Eligible elderly and disabled persons can receive benefits under this supplementary program only if they sign up and agree to a monthly premium. As of 2007, the monthly premium is tied to annual income. Individuals with an income of \$91,000 or less and couples with an income of \$182,000 or less pay \$170.10 per person if they sign up upon becoming eligible in 2022. Part B covers certain medical services and supplies, including:

- Physicians' and surgeons' services, as well as some services furnished by other medical professionals.
- Services in an emergency room, outpatient clinic, or ambulatory surgical center (or, effective Jan. 1, 2023, a rural emergency hospital).
- Home health care not covered under Part A.
- Laboratory tests, X-rays, and other diagnostic radiology services.
- Certain preventative care services and screening tests.
- Most physical and occupational therapy and speech pathology services.

- Comprehensive outpatient rehabilitation facility services and mental health care in a partial hospitalization psychiatric program, if inpatient care would otherwise be required.
- Radiation therapy; renal (kidney) dialysis and transplants; and heart, lung, heart-lung, liver, pancreas, bone marrow, and intestinal transplants.
- Approved durable medical equipment for home use.
- Drugs that are not usually self-administered.
- Certain services for diabetes.
- Ambulance services when other transportation methods are contraindicated.
- Rural health clinic and health center services, including some telemedicine.

Part B services are generally subject to a deductible (\$233 in 2022), coinsurance (generally 20% of the remaining allowed charges with certain exceptions), a deductible for blood, and amounts above the allowed charge if a doctor or supplier does not accept the Medicare-approved rate as payment in full. For outpatient hospital services, coinsurance varies by service, usually falling between 20% and 50% of allowed charges. There are no deductibles or coinsurance for certain services, such as lab tests paid under the clinical lab fee schedule, home health agency services (except some durable medical equipment, which is subject to 20% coinsurance), and some preventative care services. Payments for certain physical, speech, and occupational therapy services are subject to certain limits. Dental care, hearing aids, and routine eye care are generally not covered under the basic plan.

To get medical insurance (Part B), persons approaching age 65 may enroll during the seven-month initial enrollment period, which includes the month of their 65th birthday as well as the three months before and after. Persons desiring coverage to begin in the month they reach age 65 must enroll in the three months before their birthday. Persons who enroll after their initial enrollment period may be subject to late-enrollment premiums.

The monthly premium is deducted from the cash benefit for persons receiving Social Security, Railroad Retirement, or Civil Service Retirement benefits. Income from the medical premiums and the federal matching payments are put in a Supplementary Medical Insurance Trust Fund, from which benefits and administrative expenses are paid.

Effective Jan. 2023, there was a new basis for Part B eligibility, for post-kidney-transplant immunosuppressive drug coverage only, upon payment of a monthly premium determined solely for this coverage.

Medicare Advantage (Part C) (formerly Medicare+Choice). Persons eligible for Medicare may have the option of getting services through a Medicare-certified local coordinated care plan, such as a health maintenance organization (HMO), local preferred provider organization (PPO), provider-sponsored organization (PSO), or other local Medicare-certified **managed care** plan; a regional preferred provider organization (RPPO); a private fee-for-service plan; or, in certain cases, a special-needs plan. Any such plan must provide at least the same benefits as Parts A and B, except for hospice services. They may provide added benefits (such as vision or hearing coverage) or reduce cost sharing or premiums. Enrollees may be required to use the plan's network of participating providers or pay higher out-of-pocket costs to go outside the network.

Prescription Drug Coverage (Part D). Effective Jan. 1, 2006, an optional Medicare prescription drug plan provides insurance coverage for prescription drugs. Medicare recipients pay a monthly premium (averaging about \$33 in 2022 for basic coverage, depending on the provider) and a portion of drug costs. As of 2011, the monthly premium was tied to annual income; in 2022, individuals with an income greater than \$91,000 and couples with an income greater than \$182,000 pay more. The open enrollment period is Oct. 15-Dec. 7. Coverage varies depending on the drug plan selected.

Further details are available on the Internet at www.medicare.gov or by calling 1-800-MEDICARE (1-800-633-4227).

Medicare card. Persons qualifying for hospital insurance under Social Security receive a health insurance card. The card indicates

whether the individual has taken out medical insurance protection. It is to be shown to the hospital, skilled-nursing facility, home health agency, doctor, or other provider of covered services.

Payments are generally made only in the 50 states, District of Columbia, Puerto Rico, U.S. Virgin Isls., Guam, American Samoa, and Northern Mariana Isls.

Social Security Financing

Social Security is paid for by a tax on certain earnings (for 2022, on earnings up to \$147,800) for **Old-Age, Survivors, and Disability Insurance (OASDI)** and on all earnings (no upper limit) for hospital insurance with the **Medicare** program; the taxable earnings base for OASDI is adjusted annually to reflect changes in average wages. The employed worker and his or her employer share Social Security taxes equally.

Employers remit amounts withheld from employee wages for Social Security and income taxes to the Internal Revenue Service; employer Social Security taxes are also payable at the same time. (Self-employed workers pay Social Security taxes when filing their regular income tax forms.) The Social Security taxes (along with revenues arising from partial taxation of the Social Security benefits of certain high-income people) are transferred to the Social Security Trust Funds; they can be used only to pay benefits, the cost of rehabilitation services, and administrative expenses. By law, money not immediately needed for those purposes is invested in obligations of the federal government, which must pay interest on the money borrowed and must repay the principal when the obligations are redeemed or mature.

On Jan. 1, 1974, the **Supplemental Security Income (SSI)** program, established by the Social Security Amendments of 1972, replaced federal grants to the states to aid the needy aged, blind, and disabled. The program provides for federal payments, based on uniform national standards and eligibility requirements, and for state supplementary payments. The Social Security Administration administers the federal payments—financed by general funds of the Treasury—as well as the state supplement for those states that

choose to have it federally administered. States may supplement the federal payment of all recipients and must supplement it for persons otherwise adversely affected by the transition from the former public assistance programs. In May 2022, the number of persons receiving federally administered SSI payments was 7,638,391; the payments totaled about \$5.0 bil.

The **maximum monthly federal SSI payment** for individuals without an eligible spouse and with no other countable income, living in their own household, was \$841 in 2022. For couples where both members were eligible, the maximum payment was \$1,261.

For further information, contact the Social Security Administration toll-free at 1-800-772-1213 or visit its website at www.ssa.gov.

Examples of Monthly Social Security Benefits Available, 2022

Benefit or beneficiary	For low earnings (\$26,435) ¹	For med. earnings (\$58,744) ¹	For max. earnings (\$144,623) ^{1,2}
Primary insurance amount (worker retiring at 66 years, 4 months)	\$1,241.20	\$2,047.40	\$3,313.80
Maximum family benefit (worker retiring at 66 years, 4 months)	1,861.80	3,732.50	5,798.70
Maximum family disability benefit (worker disabled at 55; in 2022)	1,779.00	3,123.70	5,057.50
Disabled worker (worker disabled at 55):			
Worker alone	1,263.00	2,082.00	3,371.00
Worker, spouse, and 1 child	1,777.00	3,122.00	5,055.00
Retired worker claiming benefits at age 62:			
Worker alone ³	881.00	1,450.00	2,350.00
Worker with spouse claiming benefits at—			
FRA or over	1,510.00	2,486.00	4,028.00

Age 62 ³	1,290.00	2,123.00	3,441.00
Widow or widower claiming benefits at—			
Age 66 or over ⁴	1,241.00	2,047.00	3,313.00
Age 60 ⁴	887.00	1,463.00	2,369.00
Disabled widow or widower claiming benefits at age 50-59 ⁵	887.00	1,463.00	2,369.00
1 surviving child ⁴	930.00	1,535.00	2,485.00
Widow or widower at FRA or over and 1 child ⁴	1,860.00	3,582.00	5,798.00
Widowed mother or father and 1 child ⁴	1,860.00	3,070.00	4,970.00
Widowed mother or father and 2 children ⁴	1,860.00	3,732.00	5,796.00

FRA = Full retirement age. **Note:** Effective Jan. 2022. (1) Career average earnings: an average of lifetime earnings indexed to the year prior to entitlement (2021 in this case). (2) Assumes work beginning at age 22. (3) Assumes maximum reduction. (4) Assumes worker lived and worked until FRA without receiving reduced benefits. (5) Effective Jan. 1984, disabled widow(er) claiming a benefit at ages 50-59 receive a benefit equal to 71.5% of the PIA.

— = Not applicable. **Note:** Numbers may not add up to totals due to rounding. (1) Fiscal years 1977 and later consist of the 12 months ending on Sept. 30 of each year. Fiscal years prior to 1977 consisted of the 12 months ending on June 30 of each year. (2) Includes reimbursements from the general fund of the Treasury to the OASI Trust Fund for certain legislated measures since 1957. (3) Includes net profits or losses on marketable investments. Beginning in 1967, the trust fund paid administrative expenses on an estimated basis, with a final adjustment including interest made in the following fiscal year. Net interest includes these interest adjustments. Beginning in Oct. 1973, figures include relatively small gifts to the fund. (4) Beginning in 1967, includes payments for vocational rehabilitation services furnished to disabled persons receiving benefits because of their disabilities; beginning in 1983, includes reimbursements paid from the general fund to the trust fund for unnegotiated benefit checks. (5) Net change in assets during fiscal year, including amounts borrowed or repaid by other funds.

— = Not applicable. **Note:** Numbers may not add up to totals because of rounding. (1) Fiscal year 1975 ended June 30, 1975; fiscal years 1980 and after ended on Sept. 30 of each year. (2) For Part D, premiums include both amounts withheld from Social Security benefits (and certain other federal benefit payments) and amounts paid directly to Part D plans (estimated). (3) For Part B, includes matching payments from the general fund, plus certain interest-adjustment items. For Part D, includes all federal govt. transfers. (4) For full-benefit dually eligible individuals, states pay 90% of estimated costs in 2006, phasing down to 75% in 2015 and after. (5) Other income includes recoveries of amounts reimbursed from the trust fund that are not trust fund obligations and other miscellaneous income. (6) Values after 2005 include additional premiums for Medicare Advantage (MA) plans that are

deducted from beneficiaries' Social Security benefits, transferred to HI and SMI trust funds, and then transferred to the plans. (7) Includes costs of Peer Review Organizations in 1983-2001 and costs of Quality Review Organizations beginning in 2002. (8) For Part D, includes payments to plans, subsidies to employer-sponsored retiree drug plans, payments to states for low-income eligibility determinations, and Part D drug premiums (the amount collected from beneficiaries and transferred to plans and an estimated amount for premiums paid directly by enrollees to plans). Includes amounts for transitional assistance benefits in 2004-06. (9) Benefit payments less monies transferred from the HI trust fund for home health agency costs. (10) Certain HI hospice costs were misallocated to, and paid from, the Part B account of the SMI trust fund. (11) Includes an estimated \$4.221 bil (2010), \$4.843 bil (2011), \$5.222 bil (2012), \$6.306 bil (2013), \$7.450 bil (2014), \$8.445 bil (2015), \$9.084 bil (2016), \$10.176 bil (2017), \$10.513 bil (2018), \$10.569 bil (2019), \$10.467 bil (2020), and \$11.410 bil (2021) for premiums paid directly to Part D plans. (12) Reflects a larger-than-usual and upward adjustment for the reallocation of prior-year HI and SMI expenses. (13) Includes \$38.4 bil in net SMI Part B payments made through the Medicare Accelerated and Advance Payments (AAP) Program in fiscal year 2020, in light of the COVID-19 public health emergency, and subsequent net repayments of \$14.6 bil in fiscal year 2021. (14) Includes a Nov. 2020 transfer of \$37.8 bil from the general fund of the Treasury to the SMI Part B account for the Part B outstanding balance of the Medicare AAP Program, as required by Public Law 116-159. All future recoveries from Part B providers and suppliers will be transferred to the general fund of the Treasury,.

TAXES

Federal Personal Income Tax Return Facts, 2023

Source: George W. Smith IV, CPA, CGMA Partner, Andrews Hooper Pavlik PLC

Deadlines. The deadline for filing a 2022 U.S. individual income tax return (Form 1040) is Apr. 17, 2023.

Extensions. Taxpayers who cannot file a 2022 individual income tax return by the deadline can apply for a six-month extension to Oct. 16, 2023. To qualify for an extension, Form 4868 must be filed no later than Apr. 17, 2023.

E-Filing. The electronic filing program began as a pilot program in 1986; by 2011, 1 bil individual tax returns had been e-filed. As of May 20, 2022, 137.2 mil returns for income tax year 2021 had been e-filed, compared to 138.6 mil as of May 21, 2021.

Penalties. The IRS can levy two potential penalties after the filing due date when there is a balance owed. One penalty is for failing to file a timely tax return; the other is for failure to pay the tax when due. In addition, interest is charged on any unpaid tax balance.

Refunds. As of May 20, 2022, the average refund for the 2022 tax filing season was \$3,039, compared to \$2,827 as of May 21, 2021. The IRS refunded \$292.5 bil, of which \$282.5 bil was refunded with direct deposit.

Statute of limitations. Taxpayers who have not yet filed their 2019 federal tax return have until three years after the deadline to file and claim their refund. After that date, any refunds for 2019 income tax or withholding tax, including the earned income tax credit, will be lost.

Federal Income Tax Rates for Taxable-Income Brackets, 2022

Tax rate	Unmarried individuals	Married filing jointly or	Married filing separately	Head of household other

35%	\$215,951 to \$539,900	\$431,901 to \$647,850	\$215,951 to \$323,925	\$215,951 to \$539,900
37%	Over \$539,900	Over \$647,850	Over \$323,925	Over \$539,900

Standard Deduction, 2022

The standard deduction is a flat amount subtracted from the adjusted gross income of taxpayers who do not itemize deductions.

Single	\$12,950
Married filing jointly or qualifying widow(er)	\$25,900
Married filing separately	\$12,950
Head of household	\$19,400

Additional standard deduction. Elderly and/or blind, single or head of household: \$1,750. Elderly and/or blind, married or qualifying widow(er): \$1,400.

Personal exemption. The deduction for personal exemptions was suspended until Jan. 1, 2026, under the Tax Cuts and Jobs Act of 2017.

FICA and Medicare tax. For Social Security, wages paid in 2022 are taxable up to \$147,000. For Medicare, all wages are taxable.

Common Income Tax Errors

Periodically, the IRS issues a list of the most commonly made income tax errors.

1. Wrong or missing Social Security numbers.
2. Wrong names.

3. Filing status errors, such as Head of Household instead of Single.
4. Math mistakes, for example, when adding or subtracting items on a form or worksheet.
5. Errors in credits or deductions, like the Earned Income Tax Credit, Child and Dependent Care Credit, and standard deductions.
6. Wrong bank and/or account numbers for direct deposit of any tax refund.
7. Forms not signed or dated. An unsigned tax return is not valid. Both spouses must sign a joint return.
8. E-file PIN errors. E-filed returns can be signed electronically with a personal identification number (PIN). Usually, last year's PIN can be used, but if it is unknown, adjusted gross income information from last year's original return needs to be entered for verification.

Retirement Savings Plans and Income Tax

401(k) plan. The maximum amount that an individual can contribute to a 401(k) plan for 2022 is \$20,500. Individuals born before 1973 can put away an additional \$6,500, for a total of \$27,000.

IRAs. Contributions to IRAs and Roth IRAs were limited to \$6,000 in 2022. Anyone born before 1973 can contribute an extra \$1,000. Funds may be deposited into a traditional IRA for 2022 until Apr. 17, 2023. Contributions after Apr. 17, 2023 will automatically be considered funds deposited for 2023.

Roth IRA. Contributions paid into a Roth IRA are not tax deductible. Distributions of funds including investment earnings held in the account for five years or longer and distributed after age 59 ½ are free of both income tax and the 10% early-withdrawal penalty. Withdrawals from the account in less than five years can be subject to tax and a 10% withdrawal penalty regardless of age. There are income limitations on contributions.

Distributions. There is a 10% penalty for IRA distributions before age 59 ½. Distributions paid to a beneficiary due to

disability/death of the owner are not subject to this penalty, nor are payments used for certain unreimbursed medical expenses, higher-education expenses, or first-time home buyer acquisition costs (up to \$10,000).

The owner of a traditional IRA (or a SIMPLE plan, pension, or profit-sharing plan account) must begin receiving distributions by Apr. 1 of the calendar year following the year in which he or she reaches age 72. Any employee who works beyond 72 and is not a 5% or more owner of the business can continue to defer profit-sharing and pension plan distributions.

Tax Credits

A tax deduction reduces a taxpayer's taxable income whereas tax credits reduce the amount of tax owed.

Adoption credit. The adoption credit in 2022 for qualified expenses is \$14,890. The credit limit is per child and is adjusted annually for inflation. The credit is not refundable and phases out for taxpayers at higher income levels.

American Opportunity Tax Credit. This education credit provides up to \$2,500 per student per year in the first four years of a student's postsecondary education.

Child and dependent care credit. This credit is for expenses for the care of taxpayers' qualifying children under age 13 or care of a disabled spouse or dependent, while the taxpayer works or looks for work.

Child tax credit. The maximum child tax credit is \$2,000 for each qualifying child dependent age 16 and under. The credit is subject to income limitations.

Earned Income Credit. Lower-income workers who maintain a household may be eligible for an Earned Income Credit. This credit is based on total earned income such as wages, commissions, and tips. Military personnel can include tax-free combat pay in income to compute the credit.

Energy credits. There are many energy-related credits—from the purchase of an alternative fuel vehicle and the installation of

solar/fuel cell property in a residence, to the production of biodiesel or ethanol.

Alternative Minimum Tax

The Alternative Minimum Tax (AMT) was established in 1969 to prevent individuals with very high incomes from using special tax breaks to pay little or no tax. The AMT 2022 exemption for a single taxpayer is \$75,900 and \$118,100 for married filing jointly. For married taxpayers filing separate returns, the exemption is \$59,050.

Estate and Gift Taxes

Estate tax. The Tax Relief Act of 2010 reinstated the estate tax with a 35% flat rate and increased the exemptions to \$5 mil in 2011 and \$5.12 mil in 2012. The estate tax rate was increased to 40% for 2013 and subsequent years. The Tax Cuts and Jobs Act of 2017 set the 2022 exemption at \$12.06 mil per person, \$24.12 mil for married couples.

Gifting. For 2022 U.S. citizens, residents, and non-resident aliens have an annual gift tax exclusion of up to \$16,000 per individual to as many individuals as he or she chooses. For married couples the exclusion is \$32,000, even if only one spouse does all the gifting.

International property. All property owned worldwide by American citizens is subject to U.S. estate tax rules and regulations.

Resident aliens. Aliens residing in the U.S. are subject to the same rules as American citizens.

Tax Rates for Estates and Trusts

If taxable income is	The tax is
Not over \$2,750	10% of the taxable income
Over \$2,750 but not over \$9,850	\$275 plus 24% of the excess over \$2,750
Over \$9,850 but not over \$13,450	\$1,979 plus 35% of the excess over \$9,850
Over \$13,450	\$3,239 plus 37% of the excess over \$13,450

Taxable Social Security Benefits

Earnings limitations. Social Security recipients who have not reached their full retirement age of 67 in 2022 will lose \$1 of their benefits for every \$2 of earned income over \$19,560. Recipients who reached full retirement age in 2022 will not lose any benefits if they earned \$51,960 or less. Recipients will have to pay back some benefits if their income exceeded that amount.

Taxable benefits. Up to 50% of Social Security benefits may be taxable if the person's total income is more than \$25,000 but less than \$34,000 for a single individual, head of household, qualifying widow(er), or a married person who is filing separately if spouses lived apart all year; or more than \$32,000 but less than \$44,000 for married individuals filing jointly. For higher incomes, 85% of Social Security benefits may become taxable.

If the only income received during the year was Social Security, these benefits are not taxable, and the recipient probably does not have to file a tax return.

Retention of Income Tax Records

Federal tax returns generally can be audited for up to three years after filing or six years if the IRS suspects underreported income, so it's wise to keep copies of an income tax return and records for at least seven years after filing a return.

Tax Audits

Audit odds. The IRS audit rate for individual income tax returns in fiscal year 2020 was 1.40%. The odds of an audit generally trend upward with higher taxpayer income, especially on certain types of income. For taxpayers with incomes of \$50,000-\$75,000, the audit rate was 0.20%. For taxpayers with gross income of \$1 mil-\$5 mil, the rate was 1.3%. The audit rate was 0.12% for all incomes under \$200,000.

The audit selection process is not random. It is based on a set of formulas that are designed to spot questionable returns. If the IRS concludes that a person owes more tax, and he or she disagrees with the findings, the taxpayer can meet with a supervisor.

If the taxpayer still does not agree, he or she can appeal to a separate Appeals Office or take it to the U.S. Tax Court, Federal District Court, or the U.S. Court of Federal Claims.

Tax Court. The U.S. Tax Court is a federal court where taxpayers can dispute tax deficiencies as determined by the Commissioner of Internal Revenue before payment of the disputed amounts. The Tax Court is composed of presidentially appointed members. Many taxpayers choose the Tax Court because they are not required to pay the contested tax up front.

Appeals. For more information about audits, call the IRS at (800) TAX-FORM (829-3676) for its free Publication 556, *Examination of Returns, Appeal Rights, and Claims for Refund* or visit www.irs.gov.

Hearing impaired: (800) 829-4059 (TTY/TDD)

Additional services: The Volunteer Income Tax Assistance (VITA) program offers free tax return preparation help to people who generally make \$58,000 or less, persons with disabilities, and taxpayers who speak limited English. Visit www.irs.gov/individuals/free-tax-return-preparation-for-you-by-volunteers or (800) 829-1040.

Report wrongdoing: Report misconduct, waste, fraud, or abuse by an IRS employee to the Treasury Inspector General for Tax Administration at (800) 366-4484 or complaints@tigta.treas.gov.

Working With a Tax Preparer

The following are some suggestions when using a tax preparer:

- **Choose** wisely. Regulations require all paid tax return preparers including attorneys, certified public accountants, and IRS-

enrolled agents to have a Preparer Tax Identification Number. Check the preparer's qualifications and history. Ask about service fees in advance.

- **Review** last year's tax return. Make note of any changes since then such as marriage, divorce, number of dependents, retirement, job changes, additional income, or new deductions.
- **Organize** your records with income items first, followed by itemized deductions (medical, taxes, interest, and charitable and other miscellaneous deductions), followed by gains, losses, rentals, or other items.
- **Time** spent with your preparer may affect your bill. If you provide disorganized records and deductions, there may be an additional cost to have your tax preparer organize your information.
- **Prepare** a list of questions in advance. Ask about any invoices or bills that you are not sure apply.
- **Alert** your preparer if you're waiting to receive additional information. He or she can begin preparing your tax return and include the missing data later to finalize your return. Amending a return after it is completed may incur additional fees.
- **Review** your tax return before signing it. Ask questions about any item you don't understand. Even though your preparer is required to sign the return, you are responsible for its contents.

— = Not available. **Note:** Numbers may not add up to totals because of rounding. (1) Credits to taxpayer accounts excluded beginning with fiscal year 2009. (2) Incl. taxes on corporation income and unrelated business income from tax-exempt organizations. (3) Income tax reported for estates and trusts is included in individual income tax in FY1960-2007. Estate and trust income tax is reported separately from FY2008 on. (4) Incl. taxes for Old-Age, Survivors, Disability, and Hospital Insurance; federal unemployment insurance; and Railroad Retirement. (5) Excl. excise taxes collected by the U.S. Customs and Border Protection and the Alcohol and Tobacco Tax and Trade Bureau. The IRS collected taxes on alcohol and tobacco until FY1988 and taxes on firearms until FY1991.

— = Tax not collected by state. **Note:** For fiscal year 2021 (July 1, 2020-June 30, 2021) for all states except AL and MI (ends Sept. 30), NY (Mar. 31), and TX (Aug. 31). (1) Incl. taxes not shown separately. (2) Imposed on sales of particular commodities/services, e.g., alcohol and tobacco, motor fuels, public utilities. (3) Related to the exercise of a privilege, such as owning/operating a motor vehicle. (4) Incl. death and gift taxes and severance taxes (on removal of natural resources).

State Government Personal Income Tax Rates, 2022

Source: Reproduced with permission from *CCH State Tax Guide*, published and copyrighted by CCH Inc., a Wolters Kluwer business

Alaska, Florida, Nevada, South Dakota, Texas, Washington, and Wyoming did not have state income taxes and are thus not listed. Tax rates apply in stages—for example, a single person in Connecticut making \$60,000 in taxable income would pay 3% on the first \$10,000 of income, 5% on the next \$40,000, and 5.5% on the last \$10,000. For further details on some states, see notes at end of table.

Alabama

Single, Head of household, or Married filing separately

\$0 to \$500	2%
\$501 to \$3,000	4%
\$3,001 and over	5%

Married filing jointly

\$0 to \$1,000	2%
\$1,001 to \$6,000	4%
\$6,001 and over	5%

Arizona^{1,2}

Single or Married filing separately

\$0 to \$27,272	2.55%
\$27,273 and over	2.98%

Married filing jointly or Head of household

\$0 to \$54,544	2.55%
\$54,545 and over	2.98%

Arkansas²

For net income less than \$84,501:

\$0 to \$4,999	0%
\$5,000 to \$9,999	2%
\$10,000 to \$14,299	3%
\$14,300 to \$23,599	3.4%
\$23,600 to \$84,500	4.9%

For net income greater than \$84,500:

\$0 to \$4,300	2.0%
\$4,301 to \$8,500	4%
\$8,501 and over	4.9%

For net income over \$84,500 but not over \$89,100, the amount of tax is reduced by a specified bracket adjustment amount.

California^{1,2,3}

Single or Married/registered domestic partner filing separately

\$0 to \$9,325	1%
\$9,326 to \$22,107	2%
\$22,108 to \$34,892	4%
\$34,893 to \$48,435	6%
\$48,436 to \$61,214	8%
\$61,215 to \$312,686	9.3%
\$312,687 to \$375,221	10.3%
\$375,222 to \$625,369	11.3%
\$625,370 and over	12.3%

Head of household

\$0 to \$18,663	1%
\$18,664 to \$44,217	2%

AGI = Adjusted gross income; AMT = Alternative minimum tax. (1) Community property state in which, in general, one-half of the community income is taxable to each spouse. (2) Brackets indexed for inflation annually. (3) 2022 adjusted brackets were not available.

Bracketed rates listed are for 2021. Other notes, by state: **California:** An additional 1% tax is imposed on taxable income in excess of \$1 mil. **Colorado:** Individual taxpayers are subject to an AMT equal to the amount by which 3.47% of their Colorado alternative minimum taxable income exceeds their Colorado normal tax. **Connecticut:** Resident estates and trusts are subject to a 6.99% rate on all income. **Idaho:** Tax rates are reduced in 2022 to 1%, 3%, 4.5%, and 6%, but brackets are not yet available. **Illinois:** Surcharge is imposed on income from the sale or exchange of certain assets. **Indiana:** Counties may impose an AGI tax on residents or on nonresidents, or a county option income tax. **Iowa:** An AMT of 6.7% of alternative minimum income is imposed if the minimum tax exceeds the taxpayer's regular income tax liability. **Massachusetts:** Part A income represents either interest and dividends or short-term capital gains, long-term capital gains from collectibles, and long-term capital gains from pre-1996 installment sales. Part B income represents wages, salaries, tips, pensions, business income, rents, etc. Part C income represents gains from the sale of capital assets held for more than one year. 5.85% optional rate may be elected for Part A interest and dividend income, Part B income after exemptions, and Part C income. **Minnesota:** A 6.75% AMT is imposed. **New Mexico:** Qualified nonresident taxpayers may pay an alternative tax of 0.75% of gross receipts from sales in New Mexico. **New York:** A supplemental tax is imposed to recapture the tax table benefit. **Vermont:** The tax amount is increased by 24% for certain items.

Current expenditure per pupil ADA ⁴	7,394	11,427	14,570

* = Data not collected. NA = Not available. ADA = Average daily attendance. **Note:** Because of rounding, details may not add up to totals. Prior to 1959-60, data do not include Alaska and Hawaii. (1) Revenues and expenditures are provisional data; high school graduates, and expenditure per pupil ADA are projected. (2) Data for 1899-1900 are based on total population from the decennial census. From 1919-20 to 1959-60, total population includes armed forces overseas, as of July 1 preceding the school year. Data for later years are for resident population excluding armed forces overseas. (3) Data for 1899-1940 are school year enrollment; data for later years are fall enrollment. (4) Because of changes in the definition of "current expenditures," data for 1959-60 and later years are not entirely comparable with prior years. (5) Incl. expenditures for community services, adult education, community colleges, private schools, and other progs. not part of public and secondary education. (6) Data prior to 1959-60 include supervisors, principals, teachers, and nonsupervisory instructional staff.

— Not applicable. (1) The 4-year adjusted cohort graduation rate (ACGR) is the number of students who graduate in 4 years with a regular high school diploma divided by the number of students who form the adjusted cohort for the graduating class. From the beginning of 9th grade (or the earliest high school grade), students who are entering that grade for the first time form a cohort that is “adjusted” by adding any students who subsequently transfer into the cohort and subtracting any students who subsequently transfer out, emigrate to another country, or die.

High School Dropouts by Sex, Race, and Ethnicity, 1960-2020

NA = Not available. **Note:** Table shows “status” dropouts, defined as 16- to 24-year-olds who are not enrolled in school and who have not completed a high school program, regardless of when they left school. People who have received GED credentials are not shown. Excludes persons in prison or in the military and other persons not living in households. Race categories exclude persons of Hispanic ethnicity unless otherwise noted. (1) Because of changes in data collection procedures, data for years prior to 1992 may not be comparable to later years. For 2005 and after, white and Black data exclude persons identifying themselves as being of two or more races. (2) Includes other racial/ethnic categories not separately shown. (3) Based on the Apr. 1960 decennial census. (4) White and Black data include persons of Hispanic ethnicity.

COVID-19 Impact on Students and Staff in Public Schools, 2022

Source: 2022 School Pulse Panel, Institute of Education Sciences, U.S. Dept. of Education

The School Pulse Panel collected information on the impact of the COVID-19 pandemic from a national sample of approximately 2,400 public elementary, middle, high, and combined-grade schools between Jan. and June 2022.

Note: "Private" includes all nonpublic schools. (1) Fall enrollment. (2) In thousands. Data from fall 1980 onward covers an expanded universe of private schools; comparisons with earlier years should be avoided. (3) Percent of U.S. students enrolled in private schools. (4) Estimated. (5) Projected.

Program for International Student Assessment (PISA) Scores, 2000-18

Source: National Center for Education Statistics, U.S. Dept. of Education

Scores are reported on a scale from 0 to 1,000. The PISA test is administered to 15-year-old students.

— = Not available. * = Organization for Economic Cooperation and Development (OECD) nation as of 2018. (1) 50-75% of the 15-year-old population is covered by the PISA sample. (2) Scores for China only include Beijing, Shanghai, Jiangsu, and Zhejiang provinces. (3) The average of the national averages of the OECD member countries, with each country weighted equally.

Mathematics and Reading Scores of U.S. Students at Age 9, 1971-2022

Source: National Assessment of Educational Progress (NAEP), National Center for Education Statistics, U.S. Dept. of Education

In 2022, the National Center for Education Statistics (NCES) conducted a special administration of the NAEP long-term trend assessments for age 9 students to examine achievement during the COVID-19 pandemic. Average scores for these students in 2022 declined 5 points in reading and 7 points in mathematics compared to 2020. It was the largest average decline in reading scores since 1990 and the first-ever decline in math scores since the NAEP began comparable assessments in the 1970s.

Note: In 2004, NAEP changed the assessment format.

Mathematics, Reading, and Science Achievement of U.S. Students, 1998-2019

Source: National Assessment of Educational Progress, National Center for Education Statistics, U.S. Dept. of Education

Percent of public school students in a grade who scored at or above basic levels in national tests. Basic level denotes a partial mastery of prerequisite knowledge and skills fundamental for proficient work at each grade.

Homeschooled Students, 2019

Source: National Center for Education Statistics, U.S. Dept. of Education

A total of 1,456,586 U.S. students in grades K-12 were homeschooled in 2019, down from 1,689,726 in 2016, 1,772,987 in 2012, and 1,520,140 in 2007, and up from 1,095,652 in 2003 and 850,171 in 1999. In a 2019 U.S. Dept. of Education survey of parents who homeschool their children, the reason they gave as most important in their decision to homeschool was concern over the school environment, with such factors as safety, drugs, or negative peer pressure (25%); dissatisfaction with academic instruction in schools (15%); desire to provide religious instruction (13%); emphasis on family life together (8%); desire to provide a nontraditional approach to education (8%); the child has other special needs (7%); desire to provide moral instruction (7%); and the child has a physical or mental health problem (3%). In all, 80% cited concern over school environment as one of their reasons, 75% cited moral instruction, 75% cited emphasis on family life together, 73% cited dissatisfaction with academic instruction, and 59% cited religious instruction.

Total	1,457	NA	2.8

NA = Not applicable. **Note:** Numbers may not add up to totals because of rounding. Homeschooled students are school-age children in a grade equivalent to K-12 who receive instruction at home all or most of the time. Excludes students enrolled in public or private school more than 25 hours per week or homeschooled because of temporary illness only. (1) Percentage of total subgroup (e.g., all "City" students) that is homeschooled. (2) Race categories exclude persons of Hispanic ethnicity, who may be of any race. (3) Includes two or more races and race/ethnicity not reported.

Students With Disabilities Receiving Educational Services, 1976-2021

NA = Not available. **Note:** Data for 1947-95 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more two-year colleges and excludes a few higher education institutions that do not grant degrees. (1) Fall enrollment. (2) Degree-credit enrollment only. (3) Includes part-time resident students and all extension students (students attending courses at sites separate from the primary reporting campus). In later years, part-time student enrollment was collected as a distinct category. (4) Large increases are due to the addition of schools accredited by the Accrediting Commission of Career Schools and Colleges of Technology.

Financial Aid for College and Other Postsecondary Education

Reviewed by National Association of Student Financial Aid Administrators; as of May 2022

The cost of postsecondary education in the U.S. continues to increase, but financial aid—in the form of **grants** (no repayment needed), **loans**, and/or **work-study** programs—is widely available to help families meet these expenses. Most federal aid is limited to families that demonstrate financial need as determined by standard formulas and is designed to help students attend the college of their choice regardless of their ability to pay. Financial aid personnel at each school can provide information about all aid programs (federal, state, institutional, and private) available to students, how to apply, and deadlines.

All applicants for federal aid must file a Free Application for Federal Student Aid (**FAFSA**), generally as soon as possible after Oct. 1 for the academic year starting the following Aug. or Sept. This change from Jan. in prior years allows students to apply for aid earlier. Applicants can file a FAFSA form online at fafsa.gov, on the

myStudentAid mobile app, or by completing a printed-out form and mailing it.

Figures provided should match federal income tax forms filed for the previous year. (The use of tax data that has already been filed ensures timely processing.) Thus, the application for the 2022-23 academic year, available Oct. 1, 2021, should be filed with 2020 tax information. This is made easier by the availability of the IRS Data Retrieval Tool, which allows online applicants to access and transfer IRS tax return information directly into their FAFSA. Many other sources of aid—state governments, employers and unions, civic organizations, and the institutions themselves—also use the FAFSA to determine eligibility for aid. Some federal programs pay for postsecondary education in return for service: AmeriCorps, Reserve Officers' Training Corps (Army, Navy, and Air Force), the G.I. Bill, and the National Health Service Corps. A student must reapply for aid annually.

Students, parents, and borrowers are required to use an **FSA ID**, made up of a username and password, to access certain U.S. Dept. of Education websites. An FSA ID is used to confirm identity when accessing financial aid information and electronically signing federal student aid documents.

A **federal formula**, based on information provided on the FAFSA, takes into account such factors as family income in the preceding calendar year, parental and student assets (excluding the parents' home, farm, or certain small businesses), and length of time to parents' retirement. Financial aid personnel have the authority to consider unusual expenses, such as very high medical expenses, which are not reported on the FAFSA. Outside scholarships are also taken into account in determining eligibility for federal, institutional, and state financial aid programs.

The formula determines a family's **expected family contribution** (EFC), which is divided among the number of family members—excluding parents—in college. The EFC is subtracted from the total cost of attending college for each person. The difference determines financial need and the maximum federal aid for which the family may be eligible. (Some institutions use a separate formula for need-based

institutional aid.) Some schools guarantee they will meet the full financial need of each admitted student. Schools might try to cover a student's financial need using a combination of tools but be unable to because of a lack of funds.

The **aid package** offered by each school may include one or more of the following: Federal Pell Grants, for those who demonstrate sufficient financial need; Federal Supplemental Educational Opportunity Grants, for those who still have significant need after receiving Federal Pell Grants; grants from the school; Federal Work-Study or other work programs; and federal Direct Subsidized and Unsubsidized Loans (often referred to as Direct Loans). Parents of undergraduates and students in graduate or professional school may apply for a PLUS Loan. Direct Unsubsidized Loans and Direct PLUS Loans are available regardless of financial need, but students and parents must still complete the FAFSA to get these loans. Professional judgment, which allows an institution to take into account current financial circumstances not reflected in the FAFSA, is also available. Students and families that have incurred a loss of income or job elimination can work directly with the financial aid office of their chosen institution to ensure an accurate reflection of their current financial situation. In light of the COVID-19 pandemic, students and families are encouraged to make aid offices aware of any instance of hardship during the national emergency that is creating difficulty in obtaining postsecondary education.

Loans have varying interest rates and other requirements. Repayment of Direct Subsidized Loans and Direct Unsubsidized Loans generally does not begin until after graduation; deferments, income-based repayment plans, and loan forgiveness are available on federal loans for students who meet certain requirements. For PLUS Loans, parents and graduate-level students must pass a credit check and may need to begin repayment of both principal and interest while the student is still in school.

Terms may vary, but federal student loans must be repaid, even if financial circumstances change, education is incomplete or not as expected, or post-graduation income is less than expected. The loan servicer or lender is required to provide a loan repayment schedule

that states the first payment due date, the number and frequency of payments, and the amount due. Some loans have a grace period, a set period of time (in most cases six months) after graduation before repayment begins. Direct loans have a number of repayment plan options—including graduated repayments, extended repayment, income-based repayment—or offer loan consolidation. In most cases, student loan debt cannot be discharged in bankruptcy. Certain federal income **tax credits and refunds** are available to families who meet requirements.

Rules for financial aid are complex and changeable. Comprehensive resources on financial aid from the U.S. Dept. of Education, including fact sheets, videos, worksheets, and other tools, are available online at studentaid.gov/resources.

Further information available from the Federal Student Aid Information Center: 1-800-4-FED-AID, Mon.-Fri., 8 AM-11 PM ET; Sat.-Sun., 11 AM-5 PM ET; studentaid.gov; web chat also available.

Note: Minimum score, 1; maximum score, 36. Test scores and characteristics of college-bound students are based on the performance of all ACT-tested students who graduated in the spring of a given school year and took the ACT assessment during junior or senior year of high school. (1) For 2020 and 2021, ACT reported a category of “other responses” for gender that included “another gender” and “prefer not to respond,” as well as missing values. (2) Persons of Hispanic origin may be of any race.

NA = Not applicable. **Note:** In 1995, the College Board recentered the scoring scale for the SAT. Earlier scores have been adjusted to account for this recentering. (1) Verbal section, 1975-2005; critical reading, 2006-16. (2) Through Jan. 2016. (3) Beginning in Mar. 2016, students took a redesigned SAT. The College Board advised against comparing 2016-21 SAT results with earlier data. (4) For 2020 and 2021, 0.1% and 0.2% of test takers, respectively, responded “another/no response” for gender.

NA = Not available. **Note:** In 1995, the College Board recentered the scoring scale for the SAT. In 2005, the Verbal portion became Critical reading, and a writing test was added. In 2016, this portion became Evidence-based reading and writing. (1) Beginning in Mar. 2016, students took a redesigned SAT test. The College Board advised against comparing 2021 SAT results with earlier data. (2) Percentage of students from the class of 2021 who took the SAT during high school.

EDUCATION: COLLEGES AND UNIVERSITIES

Four-Year Colleges and Universities

Source: Peterson's College Database © 2022 Peterson's, LLC. All rights reserved.

Note: These listings include only accredited degree-granting institutions in the U.S. and U.S. territories with a total enrollment of 1,200 or more. Only four-year colleges and universities that award a bachelor's degree as their highest undergraduate degree are included. Data reported for institutions that provided updated information on Peterson's Annual Survey of Undergraduate Institutions for the 2021-22 academic year, with some exceptions where the previous academic year was the most recent available.

All institutions are coeducational except those where the ZIP code is followed directly by a number in parentheses: (1) = men only; (2) = primarily men; (3) = women only; (4) = primarily women; (5) undergraduate: men only, graduate: coed; (6) undergraduate: women only, graduate: coed.

The **Tuition & fees** column shows the annual tuition and required fees for full-time students or, where indicated, the tuition and standard fees per unit for part-time students. Where tuition varies according to residence, the figure is given for the most local resident and is coded as follows: (A) = area residents; (S) = state residents; all other figures apply to all students regardless of residence. Where annual expenses are expressed as a lump sum (including full-time tuition, mandatory fees, and room and board), the figure is entered under Tuition & fees and coded (C) = comprehensive fee. **Room & board** is the typical cost for one academic year.

Control: (1) independent (nonprofit); (2) independent-religious; (3) proprietary (profit-making); (4) federal; (5) state; (6) commonwealth (Puerto Rico); (7) territory (U.S. territories); (8)

county; (9) district; (10) city; (11) state and local; (12) state-related; (13) private—unspecified; (14) public—unspecified. **Degree** means the highest degree offered: B = bachelor's, M = master's, D = doctorate.

Enrollment is the total number of matriculated undergraduate and (if applicable) graduate students.

Faculty is the total number of full-time and part-time faculty members teaching courses.

Grad. rate is the percentage of full-time, first-time bachelor's (or equivalent) degree-seeking undergraduate students entering school in 2015 (or most recent available year prior) who obtained their degrees within six years.

NA indicates category is inapplicable, or data is not available from a consistent source.

UNITED STATES FACTS

Superlative U.S. Statistics

Source: U.S. Geological Survey, U.S. Dept. of the Interior; U.S. Census Bureau, U.S. Dept. of Commerce; World Almanac research

Superlative Statistics for the 50 States

Total area for 50 states and Washington, DC		3,796,742 sq mi
Land area for 50 states and Washington, DC		3,531,905 sq mi
Water area for 50 states and Washington, DC		264,837 sq mi
Largest state	Alaska	665,384 sq mi
Smallest state	Rhode Island	1,545 sq mi
Largest county (excluding Alaska)	San Bernardino County, CA	20,105 sq mi
Smallest county	Arlington County, VA ¹	26 sq mi
Largest incorporated city (by area, pop. 1,000+)	Sitka, AK	4,815 sq mi
Northernmost city	Utqiagvik (formerly Barrow), AK	71°15' N
Northernmost point	Point Barrow, AK	71°23' N
Southernmost city	Honolulu, HI	21°19' N ²
Southernmost settlement	Discovery Harbor, HI	19°02' N
Southernmost point	Ka Lae (South Point), island of Hawaii	18°54' N (155°41' W)
Easternmost city	Eastport, ME	67°00' W
Easternmost incorporated place	Lubec, ME	66°59' W
Easternmost point ³	Pochnoi Point, Semisopochnoi Island, AK	179°46' E
Westernmost city	Adak (formerly Adak Station), AK	176°36' W
Westernmost incorporated place	Adak (formerly Adak Station), AK	176°36' W
Westernmost point	Amatignak Island, AK	179°06' W
Highest incorporated	Leadville, CO	10,158 ft

city		
Lowest settlement	Bombay Beach, CA	−208 ft
Highest point on Atlantic coast	Cadillac Mountain, Mount Desert Island, ME	1,530 ft
Oldest national park	Yellowstone National Park (1872), WY-MT-ID	2,219,791 acres
Largest national park	Wrangell-St. Elias, AK	8,323,146 acres
Longest river system	Mississippi-Missouri-Red Rock	3,710 mi
Highest mountain	Denali (formerly Mt. McKinley), AK	20,310 ft
Lowest point	Death Valley, CA	−282 ft
Deepest lake	Crater Lake, OR	1,949 ft
Rainiest spot	Mount Waialeale, Kauai, HI	annual avg. rainfall 460 in. (30-yr period)
Largest gorge	Grand Canyon, Colorado River, AZ	277 mi long, 600 ft to 18 mi wide, 1 mi deep
Deepest gorge	Hells Canyon, Snake River, OR-ID	7,913 ft
Largest dam	New Cornelia Tailings, Ten Mile Wash, AZ ⁴	7.4 bil cu ft material used
Tallest building	One World Trade Center, New York, NY	1,782 ft
Largest building	Boeing Everett Production Facility, Everett, WA	472,000,000 cu ft; covers 98.3 acres
Largest office building	Pentagon, Arlington, VA	77,015,000 cu ft; covers 29 acres
Tallest supported structure	KVLY-TV Tower, Blanchard, ND	2,063 ft
Tallest freestanding tower	Stratosphere Tower, Las Vegas, NV	1,149 ft
Longest bridge span	Verrazzano-Narrows Bridge, New York, NY	4,260 ft
Highest bridge	Royal Gorge Bridge, Cañon City, CO	bridge deck 955 ft above water
Deepest well (onshore)	Bertha Rogers No. 1 (inactive gas well), Washita County, OK	31,441 ft

Superlative Statistics for the 48 Contiguous States

Total area for 48 states and Washington, DC		3,120,426 sq mi
Land area for 48 states and Washington, DC		2,954,841 sq mi
Water area for 48 states and Washington, DC		165,585 sq mi
Largest state	Texas	268,596 sq mi
Northernmost incorporated place	Sumas, WA	48°59' N
Northernmost settlement	Angle Inlet, MN	49°20' N
Northernmost point	Northwest Angle, MN	49°21' N
Southernmost city	Key West, FL	24°33' N
Southernmost mainland city	Florida City, FL	25°26' N
Southernmost point	Coalbin Rock, FL	24°27' N
Easternmost incorporated place	Lubec, ME	66°59' W
Easternmost point	Sail Rock, ME	66°57' W
Westernmost city	Port Orford, OR	124°30' W
Westernmost point	Bodelteh Islands, WA	124°45' W
Highest mountain	Mount Whitney, CA	14,505 ft

(1) Smallest total area. Smallest county by land area is Kalawao County, Hawaii, at 12 sq mi; its total area (including water) is 53 sq mi. (2) Latitude is for Urban Honolulu census designated place. (3) As measured if the prime meridian and 180° longitude are considered east-west boundaries. (4) Privately owned industrial dam composed of tailings, remnants of a mining process.

Highest and Lowest Elevations in U.S. States and Territories

Source: U.S. Geological Survey, U.S. Dept. of the Interior (negative sign indicates below sea level)

State/territory	Highest point		
	Name	County	Elev. (ft)
Alabama	Cheaha Mountain	Cleburne	2,413
Alaska	Denali (fmr. Mt. McKinley)	Denali	20,310

Washington	157	3,026
Arctic Coast	1,060	2,521
United States	12,383	88,633³

(1) Length of general outline of seacoast. Measurements were made in 1948 with a unit measure of 30 minutes of latitude on charts as near the scale of 1:1,200,000 as possible. Includes coastlines of large sounds and bays. (2) Shoreline of outer coast, offshore islands, sounds, bays, rivers, and creeks to the head of tidewater or to a point where tidal waters narrow to a width of 100 ft. Figures obtained in 1939-40 with a recording instrument on the largest-scale charts and maps then available. (3) Total length of U.S. tidal shoreline is 95,471 statute miles, which incl. measurements of outlying U.S. territories and possessions.

States: Capitals, Key Dates, Geographic Data

Source: *Statistical Abstract of the United States*, U.S. Census Bureau, U.S. Dept. of Commerce

The 13 colonies that declared independence from Great Britain and fought the War of Independence (American Revolution) became the 13 original states. They were, in the order in which they ratified the Constitution: Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island.

NA = Not applicable. **Note:** Land and water areas, which are as of Jan. 1, 2010, may not add up to totals because of rounding. (1) First permanent settlement by Europeans. (2) Does not include Aleutian Islands or Alexander Archipelago.

Continental Divide of the U.S.

The Continental Divide of the U.S., also known as the Great Divide, is located at the watershed created by the mountain ranges, or tablelands, of the Rocky Mountains. This watershed separates the waters that ultimately drain into the Atlantic Ocean and its marginal seas from those waters that drain into the Pacific Ocean. The majority of water flowing E in the U.S. drains into the Gulf of Mexico and then the Atlantic. The majority of water flowing W drains through the Columbia River or Colorado River, which flows into the Gulf of California before reaching the Pacific.

The location and route of the Continental Divide across the U.S. can be described as follows:

Beginning at the U.S.-Mexico border, near longitude 108°45' W, the Divide, in a northerly direction, crosses New Mexico along the western edge of the Rio Grande drainage basin, entering Colorado near longitude 106°41' W. From there by an irregular route N across Colorado along the western summits of the Rio Grande and Arkansas, South Platte, and North Platte river basins, and across Rocky Mountain National Park, entering Wyoming near longitude 106°52' W.

From there in a northwesterly direction, forming the western rims of the North Platte, Big Horn, and Yellowstone river basins, crossing the SW portion of Yellowstone National Park. From there in a westerly and then northerly direction forming the boundary between Idaho and Montana, to a point on the boundary near longitude 114°00' W. From there northeasterly and northwesterly through Montana and Glacier National Park, entering Canada near longitude 114°04' W.

Depending on how a “divide” is defined, the U.S. can also be characterized as having a Northern (or Laurentian) Divide, Eastern Divide, and St. Lawrence Seaway Divide. Some of the waters at the Northern Divide drain into Hudson Bay and the Arctic Ocean. The Appalachian Mountains mark the Eastern Divide, with waters joining the Atlantic or Gulf of Mexico. The waters at the St. Lawrence Seaway Divide, near Chicago, flow into the Gulf of St. Lawrence or Gulf of Mexico.

Chronological List of Territories, With State Admissions to Union

Source: U.S. National Archives and Records Administration

Territory	Date of act creating territory	When act took effect	Date of admission as state	Years as terr.
Northwest Territory ¹	July 13, 1787	No fixed date	Mar. 1, 1803 ²	16
Territory South of Ohio River (Southwest Territory)	May 26, 1790	No fixed date	June 1, 1796 ³	6
Mississippi	Apr. 7, 1798	When president acted	Dec. 10, 1817	19
Indiana	May 7, 1800	July 4, 1800	Dec. 11, 1816	16
Orleans	Mar. 26, 1804	Oct. 1, 1804	Apr. 30, 1812 ⁴	7
Michigan	Jan. 11, 1805	June 30, 1805	Jan. 26, 1837	31
Louisiana-Missouri ⁵	Mar. 3, 1805	July 4, 1805	Aug. 10, 1821	16
Illinois	Feb. 3, 1809	Mar. 1, 1809	Dec. 3, 1818	9
Alabama	Mar. 3, 1817	When MS formed state govt.	Dec. 14, 1819	2
Arkansas	Mar. 2, 1819	July 4, 1819	June 15, 1836	17
Florida	Mar. 30, 1822	No fixed date	Mar. 3, 1845	23

Wisconsin	Apr. 20, 1836	July 3, 1836	May 29, 1848	12
Iowa	June 12, 1838	July 3, 1838	Dec. 28, 1846	8
Oregon	Aug. 14, 1848	Date of act	Feb. 14, 1859	10
Minnesota	Mar. 3, 1849	Date of act	May 11, 1858	9
New Mexico	Sept. 9, 1850	On president's proclamation	Jan. 6, 1912	61
Utah	Sept. 9, 1850	Date of act	Jan. 4, 1896	46
Washington	Mar. 2, 1853	Date of act	Nov. 11, 1889	36
Kansas	May 30, 1854	Date of act	Jan. 29, 1861	6
Nebraska	May 30, 1854	Date of act	Mar. 1, 1867	12
Colorado	Feb. 28, 1861	Date of act	Aug. 1, 1876	15
Dakota	Mar. 2, 1861	Date of act	Nov. 2, 1889	28
Nevada	Mar. 2, 1861	Date of act	Oct. 31, 1864	3
Arizona	Feb. 24, 1863	Date of act	Feb. 14, 1912	49
Idaho	Mar. 3, 1863	Date of act	July 3, 1890	27
Montana	May 26, 1864	Date of act	Nov. 8, 1889	25
Wyoming	July 25, 1868	When officers were qualified	July 10, 1890	22
Alaska	May 17, 1884 ⁶	No fixed date	Jan. 3, 1959	75
Oklahoma	May 2, 1890	Date of act	Nov. 16, 1907	17
Hawaii	Apr. 30, 1900	June 14, 1900	Aug. 21, 1959	59

Note: California was never organized as a territory. It was administered by the military after its acquisition from Mexico (1848) until its admission as a state (1850). (1) Included what is now Ohio, Indiana, Illinois, Michigan, Wisconsin, and E Minnesota. (2) Date of admission for Ohio, the first state created out of territory, based on the date its General

Assembly first met. Congress approved Ohio's entry into the Union on Feb. 19, 1803. (3) Admitted as the state of Tennessee. (4) Admitted as the state of Louisiana. (5) The act renaming Louisiana Territory as Missouri Territory (June 4, 1812) became effective Dec. 7, 1812. (6) Act constituted Alaska as a district, though it was often referred to and administered as a territory. The Territory of Alaska was formally organized by an act of Aug. 24, 1912.

U.S. Geographic Centers

Source: U.S. Geological Survey, U.S. Dept. of the Interior

There is no generally accepted definition of a geographic center and no uniform method for determining it. Geographic center is defined here as the center of gravity of the surface of an area, or that point on which an area would balance if it were a plane of uniform thickness.

No government agency has officially established any points marking the geographic center of the U.S., the conterminous U.S. (48 states), or the North American continent. In 1941, private citizens erected a monument in Lebanon, KS, marking it as the geographic center of the then U.S. (conterminous). Residents of Rugby, ND, installed a cairn after the U.S. Geologic Survey, in 1931, determined it to be the center of the North American continent. In 2017, a Univ. at Buffalo geography professor announced that Center, ND, was the continental center according to a mathematical method he developed. The geographic centers in the following list are approximate. They are indicated by county then city unless otherwise noted.

U.S. (50 states): W of Castle Rock, Butte County, South Dakota;
44°58' N, 103°46' W

Conterminous U.S. (48 states): nr. Lebanon, Smith County,
Kansas; 39°50' N, 98°35' W

North American continent: 6 mi W of Balta, Pierce County, North
Dakota; 48°10' N, 100°10' W

Alabama: Chilton, 12 mi SW of Clanton

Alaska: 63°50' N, 152° W, approx. 60 mi NW of Denali

Arizona: Yavapai, 55 mi E-SE of Prescott

Arkansas: Pulaski, 12 mi NW of Little Rock
California: Madera, 38 mi E of Madera
Colorado: Park, 30 mi NW of Pikes Peak
Connecticut: Hartford, at East Berlin
Delaware: Kent, 11 mi S of Dover
District of Columbia: near 4th and L Sts. NW
Florida: Hernando, 12 mi N-NW of Brooksville
Georgia: Twiggs, 18 mi SE of Macon
Hawaii: Hawaii; 20°15' N, 156°20' W, off Maui Island
Idaho: Custer, SW of Challis
Illinois: Logan, 28 mi NE of Springfield
Indiana: Boone, 14 mi N-NW of Indianapolis
Iowa: Story, 5 mi NE of Ames
Kansas: Barton, 15 mi NE of Great Bend
Kentucky: Marion, 3 mi N-NW of Lebanon
Louisiana: Avoyelles, 3 mi SE of Marksville
Maine: Piscataquis, 18 mi N of Dover
Maryland: Prince George's, 4.5 mi NW of Davidsonville
Massachusetts: Worcester, N part of city of Worcester
Michigan: Wexford, 5 mi N-NW of Cadillac
Minnesota: Crow Wing, 10 mi SW of Brainerd
Mississippi: Leake, 9 mi W-NW of Carthage
Missouri: Miller, 20 mi SW of Jefferson City
Montana: Fergus, 11 mi W of Lewistown
Nebraska: Custer, 10 mi NW of Broken Bow
Nevada: Lander, 26 mi SE of Austin
New Hampshire: Belknap, 3 mi E of Ashland
New Jersey: Mercer, 5 mi SE of Trenton
New Mexico: Torrance, 12 mi S-SW of Willard

New York: Madison, 12 mi S of Oneida and 26 mi SW of Utica

North Carolina: Chatham, 10 mi NW of Sanford

North Dakota: Sheridan, 5 mi SW of McClusky

Ohio: Delaware, 25 mi N-NE of Columbus

Oklahoma: Oklahoma, 8 mi N of Oklahoma City

Oregon: Crook, 25 mi S-SE of Prineville

Pennsylvania: Centre, 2.5 mi SW of Bellefonte

Rhode Island: Kent, 1 mi S-SW of Crompton

South Carolina: Richland, 13 mi SE of Columbia

South Dakota: Hughes, 8 mi NE of Pierre

Tennessee: Rutherford, 5 mi NE of Murfreesboro

Texas: McCulloch, 15 mi NE of Brady

Utah: Sanpete, 3 mi N of Manti

Vermont: Washington, 3 mi E of Roxbury

Virginia: Buckingham, 5 mi SW of Buckingham

Washington: Chelan, 10 mi W-SW of Wenatchee

West Virginia: Braxton, 4 mi E of Sutton

Wisconsin: Wood, 9 mi SE of Marshfield

Wyoming: Fremont, 58 mi E-NE of Lander

Lengths of U.S. Boundaries

The length of the boundary between the U.S. and Canada is 5,525 mi—3,987 mi between the conterminous U.S. and Canada and 1,538 mi between Alaska and Canada. A 1925 treaty established a permanent International Boundary Commission to maintain the boundary. The U.S.-Mexican border was established by multiple treaties (1848, 1853, 1970) at 1,954-miles long. (The U.S. Census Bureau has put the border at 1,933-miles long.) It largely follows the Rio Grande and Colorado River, from the Gulf of Mexico to the Pacific Ocean. It is overseen by the International Boundary and Water Commission.

Origins of the Names of U.S. States and Territories

Source: State officials; Smithsonian Institution; Topographic Division, U.S. Geological Survey, U.S. Dept. of the Interior

Alabama: Choctaw word for a Chickasaw tribe. First noted in accounts of Hernando de Soto expedition.

Alaska: Russian version of Aleut word *alakshak* for “peninsula,” “great lands,” or “land that is not an island.”

American Samoa: Etymology varies.

Arizona: Spanish version of Pima Indian word for “little spring place” or Aztec *arizuma*, meaning “silver-bearing.”

Arkansas: Algonquin name for Quapaw Indians, meaning “south wind.”

California: Bestowed by Spanish conquistadors (possibly Hernán Cortés). It was the name of an imaginary island in the 1510 Spanish novel *Las Sergas de Esplandián* (The Exploits of Esplandián), by Garci Rodríguez de Montalvo. The Spanish first visited *Baja* (Lower) *California* in 1533. The present-day U.S. state was called *Alta* (Upper) *California*.

Colorado: From Spanish for “red,” first applied to Colorado River.

Connecticut: From Algonquin *quinnehtukqut*, meaning “long river place.”

Delaware: Named for Lord De La Warr, early governor of Virginia; first applied to river, then to Indian tribe (Lenni-Lenape).

District of Columbia: For Christopher Columbus, 1791.

Florida: Named by Juan Ponce de León *Pascua Florida*, “Flowery Easter,” on Easter Sunday, 1513.

Georgia: Named by colonial administrator James Oglethorpe for King George II of England in 1732.

Guam: From Chamorro name, *Guahan*, meaning “we have.”

Hawaii: Possibly derived from *Hawaiki* or *Owhyhee*, Polynesian word for “homeland.”

Idaho: George Willing claimed to have coined the name, with the invented meaning “gem of the mountains.” He first suggested it for

the Pikes Peak mining territory (Colorado) before the name was adopted for the new mining territory of the Pacific Northwest.

Illinois: French for *Illini* or “land of *Illini*,” Algonquin word meaning “men” or “warriors.”

Indiana: Means “land of the Indians.”

Iowa: Indian word variously translated as “here I rest” or “beautiful land.” Named for the Iowa River, which was named for the Iowa Indians.

Kansas: Sioux word for “south wind people.”

Kentucky: Indian word variously translated as “dark and bloody ground,” “meadowland,” and “land of tomorrow.”

Louisiana: Part of territory called Louisiana by René- Robert Cavelier Sieur de La Salle for French King Louis XIV.

Maine: From Maine, historic French province. Also descriptive, referring to the mainland as distinct from coastal islands.

Maryland: For Queen Henrietta Maria, wife of Charles I of England.

Massachusetts: From Indian tribe whose name meant “at or about the Great Hill” in Blue Hills region south of Boston.

Michigan: From Chippewa *mici gama*, meaning “great water,” after lake of the same name.

Minnesota: From Dakota Sioux word meaning “cloudy water” or “sky-tinted water” of the Minnesota River.

Mississippi: Probably Chippewa *mici zibi*, meaning “great river” or “gathering-in of all the waters.” Also Algonquin word *messipi*.

Missouri: Algonquin Indian term meaning “river of the big canoes.”

Montana: Latin or Spanish for “mountainous.”

Nebraska: From Omaha or Otos Indian word meaning “broad water” or “flat river,” describing the Platte River.

Nevada: Spanish, meaning “snow-clad.”

New Hampshire: Named by Capt. John Mason of Plymouth Council, in 1629, for his home county in England.

New Jersey: The Duke of York, in 1664, gave a patent to Lord John Berkeley and Sir George Carteret for *Nova Caesaria*, or New Jersey, after England’s Isle of Jersey.

New Mexico: Spaniards in Mexico applied term to land north and west of Rio Grande in the 16th century.

New York: For James, Duke of York and Albany, who received patent for New Netherland from his brother Charles II and sent an expedition to capture it, 1664.

North Carolina: In 1619, Charles I gave patent to Sir Robert Heath for Province of Carolana, from *Carolus*, Latin name for Charles. Charles II granted a new patent to Earl of Clarendon and others. Divided into North and South Carolina, 1710.

North Dakota: Sioux word *Dakota*, meaning “friend” or “ally.”

Northern Mariana Isls.: For Mariana of Austria, queen regent of Spain.

Ohio: Iroquois word for “fine or good river.”

Oklahoma: Choctaw word meaning “red man,” proposed by Rev. Allen Wright, Choctaw-speaking Indian.

Oregon: Origin unknown. One theory is that the name derives from Mohegan *wauregan*, meaning “beautiful,” term used by Indians in Connecticut.

Pennsylvania: William Penn, Quaker who was made full proprietor of area by King Charles II in 1681, suggested “Sylvania,” or “woodland,” for his tract. The king’s government owed 16,000 pounds to Penn’s father, Adm. William Penn, and the land was granted as partial settlement. Charles II added “Penn” to “Sylvania,” against the modest proprietor’s desires, in honor of the admiral.

Puerto Rico: Spanish for “rich port.”

Rhode Island: Origin unknown. One theory notes that Giovanni de Verrazzano recorded observing an island about the size of the Greek island of Rhodes in 1524. Another theory is that Dutch explorer Adriaen Block named the state *Roode Eylandt* for its red clay.

South Carolina: See North Carolina.

South Dakota: See North Dakota.

Tennessee: *Tanasi* was the name of Cherokee villages on the Little Tennessee River. From 1784 to 1788, this was the State of Franklin, or Frankland.

Texas: Variant of word used by Caddo and other Indians meaning “friends” or “allies” and applied to them by the Spanish in eastern Texas. Also written *Texias*, *Tejas*, *Teysas*.

Utah: From a Navajo word meaning “upper,” or “higher up,” as applied to Shoshone tribe called Ute. Proposed name *Deseret*, “land of honeybees,” from Book of Mormon, was rejected by Congress.

Vermont: From French words *vert* (green) and *mont* (mountain). The Green Mountains were said to have been named by Samuel de Champlain. When the state was formed in 1777, Dr. Thomas Young suggested combining *vert* and *mont*.

Virgin Islands, U.S.: From Spanish name *Las Once Mil Virgenes* (11,000 Virgins), which Christopher Columbus gave to island group.

Virginia: Named by Sir Walter Raleigh, who outfitted an expedition in 1584, in honor of England’s Queen Elizabeth, the Virgin Queen.

Washington: Named after George Washington. When the bill creating the Territory of Columbia was introduced in the 32nd Congress, its name was changed to Washington because of the existence of the District of Columbia.

West Virginia: So named when western counties of Virginia refused to secede from the U.S. in 1863.

Wisconsin: Indian name, spelled *Ouisconsin* or *Mesconsing* by early chroniclers, believed to mean “grassy place” in Chippewa. Congress made it *Wisconsin*.

Wyoming: From Algonquin words for “large prairie place,” “at the big plains,” or “on the great plain.”

Territorial Sea of the U.S.

According to a Dec. 27, 1988, proclamation by Pres. Ronald Reagan, “The territorial sea of the United States henceforth extends to 12 nautical miles from the baselines of the United States determined in accordance with international law. In accordance with international law, as reflected in the applicable provisions of the 1982 United Nations Convention on the Law of the Sea, within the territorial sea of the United States, the ships of all countries enjoy the

right of innocent passage and the ships and aircraft of all countries enjoy the right of transit passage through international straits.”

Major Accessions of Territory by the U.S.

Source: U.S. Dept. of the Interior; U.S. Census Bureau, U.S. Dept. of Commerce

Not including territories such as the Panama Canal Zone and the Philippines, which are no longer under U.S. jurisdiction.

Accession	Date	Area (sq mi)
Territory in 1790 ¹	NA	888,685
Louisiana Purchase	1803	827,192
Treaty of Florida	1819	72,003
Texas	1845	390,143
Oregon Territory	1846	285,680
Mexican Cession	1848	529,017
Gadsden Purchase	1853	29,640
Alaska	1867	586,412
Hawaii	1898	6,450
Puerto Rico ²	1899	3,435
Guam ³	1899	212
American Samoa ⁴	1900	76
U.S. Virgin Islands	1917	133
Northern Marianas ⁵	1986	179

NA = Not applicable. (1) Includes that part of a drainage basin of Red River of the North, south of 49th parallel, sometimes considered part of Louisiana Purchase. (2) Ceded by Spain in 1898, ratified in 1899, and became the Commonwealth of Puerto Rico by Act of Congress on July 25, 1952. (3) Acquired in 1898; ratified 1899. (4) Acquired in 1899; ratified 1900. (5) Part of the UN Trust Territory of the Pacific Islands, which U.S. began administering in 1947; became U.S. commonwealth Nov. 3, 1986.

National Park System Recreation Visits, 1904-2021

Source: National Park Service (NPS), U.S. Dept. of the Interior

An NPS-administered site, regardless of its designation (as a park, monument, or preserve, etc.), is generally referred to as a unit. Not all units report public use statistics.

Year	Units reporting visits	Recreation visits
1904	6	120,690

National Parks and Other Areas Administered by National Park Service

As of Dec. 31, 2021, the National Park Service (NPS) administered about 85,116,467 acres of federal and non-federal land across 423 sites. Date when area was authorized or established by Congress or by presidential proclamation is given in parentheses; any date that follows indicates when a site received its current designation or was transferred to the NPS. Figure after the date is gross area acres as of Dec. 31, 2021. Listings do not include parks administered by other agencies, such as the Forest Service or Bureau of Land Management. NA = Not available.

The following units have been authorized but are not yet established: Adams Mem. (DC, authorized 2001), Ronald Reagan Boyhood Home Natl. Historic Site (IL, 2002), Coltsville Natl. Historical Park (CT, 2014), Desert Storm/Desert Shield Mem. (DC, 2014), Global War on Terrorism Mem. (DC, 2017), and Amache Natl. Historic Site (CO, 2022).

National Parks

Acadia, ME (1916/1919): 49,071. Incl. Mount Desert Isl., half of Isle au Haut, Schoodic Peninsula on mainland. Highest elevation on Eastern seaboard.

American Samoa, AS (1988): 8,257. Paleotropical rain forest, coral reef.

Arches, UT (1929/1971): 76,679. Contains giant red sand-stone arches and other products of erosion.

Badlands, SD (1939/1978): 242,756. Reformations and native prairie; animal fossils 25-37 mil years old.

Big Bend, TX (1935): 801,163. Rio Grande, Chisos Mtns.

Biscayne, FL (1968/1980): 172,971. Aquatic park encompassing chain of islands south of Miami.

Black Canyon of the Gunnison, CO (1933/1999): 30,780. Has canyon 2,900 ft deep and 40 ft wide at narrowest part.

Bryce Canyon, UT (1923/1928): 35,835. Colorful display of erosion effects.

Canyonlands, UT (1964): 337,598. At junction of Colorado and Green Rivers; extensive evidence of prehistoric peoples.

Capitol Reef, UT (1937/1971): 241,905. Nearly 100-mi-long uplift of sandstone cliffs (Waterpocket Fold) dissected by gorges.

Carlsbad Caverns, NM (1923/1930): 46,766. More than 119 limestone caves, incl. Carlsbad Cavern; Chihuahuan Desert.

Channel Islands, CA (1938/1980): 249,561. Sea lion breeding place, nesting seabirds, unique plants.

Congaree, SC (1976/2003): 26,693. Largest intact tract of old-growth bottomland hardwood forest in U.S.

Crater Lake, OR (1902): 183,224. Deepest U.S. lake, in crater of Mt. Mazama, volcano that erupted about 7,700 years ago.

Cuyahoga Valley, OH (1974/2000): 32,572. Along Ohio and Erie Canal system between Akron and Cleveland.

Death Valley, CA-NV (1933/1994): 3,408,396. Large desert. Incl. lowest point in North America and Scotty's Castle (closed until 2023 due to flood and fire damage).

Denali, AK (1917/1980): 4,740,911. Highest mountain in U.S.; formerly known as Mt. McKinley.

Dry Tortugas, FL (1935/1992): 64,701. Ft. Jefferson and seven coral reef and sand islands near Key West.

Everglades, FL (1934): 1,508,939. Largest remaining subtropical wilderness in continental U.S; incl. East Everglades Expansion Area acreage added in 1989.

Gates of the Arctic, AK (1978/1980): 7,523,897. Vast wilderness in north central region. Limited federal facilities.

Gateway Arch, St. Louis, MO (1935/2018): 193. Former Jefferson Natl. Expansion Memorial commemorates 19th cent. westward expansion; incl. Gateway Arch (authorized 1954).

Glacier, MT (1910): 1,013,126. Rocky Mt. scenery, numerous glaciers and glacial lakes. Part of Waterton-Glacier Intl. Peace Park established by U.S. and Canada in 1932.

Glacier Bay, AK (1925/1980): 3,223,383. Tidewater glaciers that move down mountainsides and break up into sea.

Grand Canyon, AZ (1919/1919): 1,201,647. Carved by Colorado River.

Grand Teton, WY (1929): 310,044. Incl. highest peaks of Teton Mtns.; summer feeding ground of largest American elk herd.

Great Basin, NV (1922/1986): 77,180. Incl. Wheeler Peak, Lexington Arch, Lehman Caves.

Great Sand Dunes, CO (1932/2004): 107,346. North America's tallest dunes.

Great Smoky Mountains, NC-TN (1926/1934): 522,427. Most biologically diverse NPS unit, with 19,000+ documented species.

Guadalupe Mountains, TX (1966): 86,367. Extensive Permian limestone fossil reef; tremendous earth fault.

Haleakala, HI (1916/1960): 33,265. Dormant volcano on island of Maui with large craters.

Hawai'i Volcanoes, HI (1916/1961): 325,605. Contains Kilauea and Mauna Loa, active volcanoes.

Hot Springs, AR (1832/1921): 5,554. Waters from park's 47 hot springs used for bathing and drinking.

Indiana Dunes, IN (1966/2019): 15,349. Stretches 15 mi along Lake Michigan.

Isle Royale, MI (1931): 571,790. Largest island in Lake Superior.

Joshua Tree, CA (1936/1994): 795,156. Desert region incl. Joshua trees, other plant and animal life.

Katmai, AK (1918/1980): 3,674,529. "Valley of Ten Thousand Smokes," scene of 1912 volcanic eruption.

Kenai Fjords, AK (1978/1980): 669,650. Marine mammals, birdlife; over 30 glaciers flow from Harding Icefield.

Kings Canyon, CA (1890/1940): 461,901. Mountain wilderness, dominated by Kings River Canyons and High Sierra; giant sequoias.

Kobuk Valley, AK (1978/1980): 1,750,716. Geological and recreational sites. Limited federal facilities.

Lake Clark, AK (1978/1980): 2,619,816. Across Cook Inlet from Anchorage; scenic wilderness, fish and wildlife. Limited federal facilities.

Lassen Volcanic, CA (1907/1916): 106,589. Contains Lassen Peak, recently active volcano; other volcanic phenomena.

Mammoth Cave, KY (1926/1941): 54,016. Longest known cave system in world (more than 420 mi currently surveyed), river 300 ft below surface.

Mesa Verde, CO (1906): 52,485. Most notable and best preserved prehistoric cliff dwellings in U.S.

Mount Rainier, WA (1899): 236,382. Most glaciated peak in contiguous U.S.

New River Gorge (and Preserve), WV (1978/2020): 72,346. Appalachian Mountain forests along 53 mi of the New River.

North Cascades, WA (1968): 504,781. Mountainous region with many glaciers, lakes.

Olympic, WA (1909/1938): 922,649. Wilderness containing glacier-capped mountains, remnant of temperate rain forest, shoreline, endemic animal species.

Petrified Forest, AZ (1906/1962): 221,390. Extensive petrified wood and Indian artifacts. Contains part of Painted Desert.

Pinnacles, CA (1908/2013): 26,686. A release site for captive-bred California condors; talus caves.

Redwood, CA (1968): 138,999. 40 mi of Pacific coastline, groves of ancient redwoods, the world's tallest trees.

Rocky Mountain, CO (1915): 265,807. On Continental Divide; incl. peaks over 14,000 ft.

Saguaro, AZ (1933/1994): 92,876. Part of Sonoran Desert; incl. giant saguaro cacti, unique to region.

Sequoia, CA (1890): 404,063. Giant sequoia groves; world's largest tree (by volume). Mt. Whitney, highest mountain in conterminous U.S.

Shenandoah, VA (1926): 200,192. Portion of Blue Ridge Mtns. Overlooks Shenandoah Valley; Skyline Drive.

Theodore Roosevelt, ND (1947/1978): 70,447. Contains part of Roosevelt's ranch and scenic badlands.

Virgin Islands, VI (1956): 15,052. Covers more than half of St. John Isl. and nearly all of Hassel Isl.; beaches, Carib Indian petroglyphs, evidence of colonial Danes.

Voyageurs, MN (1971): 218,222. Abundant lakes, forests, wildlife.

White Sands, NM (1933/2019): 146,344. World's largest gypsum dunefield.

Wind Cave, SD (1903): 33,971. Limestone caverns in Black Hills; extensive wildlife incl. bison herd.

Wrangell-St. Elias, AK (1978/1980): 8,323,146. Largest area in park system; most peaks over 16,000 ft.

Yellowstone, ID-MT-WY (1872): 2,219,791. World's first national park. More than 10,000 thermal features (geysers, hot springs); Yellowstone River falls and canyons; largest bison herd on U.S. public land.

Yosemite, CA (1890): 761,748. Yosemite Valley, country's highest waterfall, grove of sequoias, mountains.

Zion, UT (1909/1919): 147,243. Unusual shapes, landscapes resulting from erosion, faulting; evidence of past volcanic activity.

National Historical Parks

Abraham Lincoln Birthplace, Hodgenville, KY (1916/2009): 345. Memorial building, sinking spring.

Adams, Quincy, MA (1946/1998): 24. Home of Pres. John Adams, John Quincy Adams, and descendants.

Appomattox Court House, VA (1930/1954): 1,775. Where Confederate Gen. Lee surrendered to Gen. Grant, signaling Civil War's end.

Blackstone River Valley, MA-RI (2014): 1,489. Preserves the valley's industrial heritage.

Boston, MA (1974): 44. Incl. Faneuil Hall, Old North Church, Bunker Hill, Paul Revere House.

Brown v. Board of Education, KS (1992/2022): 1.85. Commemorates landmark 1954 U.S. Supreme Court decision, which ended legal segregation in schools.

Cane River Creole, LA (1994): 206. Preserves Creole culture as it developed along the Cane River.

Cedar Creek and Belle Grove, VA (2002): 3,705. Civil War battle site and an antebellum plantation in Shenandoah Valley.

Chaco Culture, NM (1907/1980): 33,960. Ruins of pueblos built by prehistoric peoples incl. Pueblo, Hopi, and Navajo.

Chesapeake & Ohio Canal, MD-DC-WV (1938/1971): 19,617. 184.5-mi historic canal; DC to Cumberland, MD.

Colonial, VA (1930/1936): 8,675. Incl. most of Jamestown Isl., site of first successful English colony; Yorktown, site of Cornwallis's surrender to George Washington.

Cumberland Gap, KY-TN-VA (1940): 24,547. Mountain pass of Wilderness Road, which carried first great migration of pioneers into America's interior.

Dayton Aviation Heritage, OH (1992): 111. Commemorates area's involvement in aviation.

First State, DE-PA (2013/2014): 1,409. Locations date from colonial past of DE, first state to ratify Constitution.

Fort Sumter and Fort Moultrie, SC (1948/2019): 233. Charleston Harbor sites, where Confederate forces fired the first

shots of the Civil War.

George Rogers Clark, Vincennes, IN (1966): 26. Commemorates American defeat of British in West during Revolution.

Golden Spike, UT (1957/2019): 2,735. Commemorates completion of first transcontinental railroad in 1869.

Harpers Ferry, MD-VA-WV (1944/1963): 3,669. At confluence of Shenandoah and Potomac Rivers, the site of John Brown's 1859 raid on the Army arsenal.

Harriet Tubman, NY (2017): 32. Buildings incl. her home, a church, Tubman Home for the Aged.

Harriet Tubman Underground Railroad, MD (2013/2014): 480. Protects landscapes on the Eastern Shore, where Tubman was born and guided other slaves to freedom.

Homestead, NE (1936/2021): 210. Commemorates Homestead Act of 1862, which spurred U.S. westward expansion.

Hopewell Culture, OH (1923/1992): 1,776. Remains of ceremonial mounds built in the Ohio River Valley, 200 BCE-500 CE.

Independence, Philadelphia, PA (1948): 45. Several properties associated with American Revolution and founding of U.S., incl. Independence Hall, Liberty Bell Center.

Jean Lafitte (and Preserve), LA (1907/1978): 25,876. Incl. Chalmette, site of 1815 Battle of New Orleans; French Quarter.

Jimmy Carter, GA (1987/2021): 78. Birthplace and home of 39th president.

Kalaupapa, HI (1980): 10,779. Former colony on Molokai Isl. for those with Hansen's disease (leprosy).

Kaloko-Honokōhau, HI (1978): 1,163. Preserves native culture of Hawaii.

Keweenaw, MI (1992): 1,870. Site of first significant copper mine in U.S.

Klondike Gold Rush, AK-WA (1976): 12,996. Preserves Chilkoot Trail used in 1898 Gold Rush. Museum in Seattle.

Lewis and Clark, OR-WA (1958/2004): 3,410. Lewis and Clark encampment, 1805-06. Incorporates former Fort Clatsop Natl. Mem. Park.

Lowell, MA (1978): 143. Textile mills, canal, 19th-cent. structures; park shows planned city of Industrial Revolution.

Lyndon B. Johnson, TX (1969/1980): 1,572. 36th president's birthplace, boyhood home, ranch.

Manhattan Project, NM-TN-WA (2015): 114. Jointly operated with Dept. of Energy, consists of three sites (Los Alamos, NM; Oak Ridge, TN; Hanford, WA) where U.S. developed world's first atomic weapons.

Marsh-Billings-Rockefeller, VT (1992): 643. Boyhood home of conservationist George Perkins Marsh.

Martin Luther King Jr., Atlanta, GA (1980/2018): 39. Birthplace, grave, church of the civil rights leader.

Minute Man, MA (1959): 1,028. Where Minute Men battled British, Apr. 19, 1775. Also includes The Wayside, home to authors Louisa May Alcott and Nathaniel Hawthorne.

Morristown, NJ (1933): 1,711. Site of important military encampments during the American Revolution; Washington's headquarters, 1779-80.

Natchez, MS (1988): 120. Antebellum estate, other preserved properties related to history of Natchez as a Cotton Belt city.

New Bedford Whaling, MA (1996): 34. Preserves structures and relics associated with the city's 19th-cent. whaling industry.

New Orleans Jazz, LA (1994): 5. Preserves, educates, and interprets jazz as it has evolved in New Orleans.

Nez Perce, ID-MT-OR-WA (1965): 4,565. Illustrates history and culture of Nez Perce, or Nimiipuu, homeland (38 sites).

Ocmulgee Mounds, GA (1934/2019): 3,431. First inhabited by Paleo Indians by c. 15,000 BCE. Ancestral land of the Muscogee (Creek), who were forcibly moved to OK in 1830s.

Palo Alto Battlefield, TX (1978/2009): 3,427. Scene of first battle of the Mexican War.

Paterson Great Falls, NJ (2011): 51. Falls helped make city one of U.S.'s earliest industrial centers.

Pecos, NM (1965/1990): 6,693. Ruins of ancient Pueblo of Pecos, archaeological sites, and two associated Spanish colonial missions from 17th and 18th centuries.

Pu'uhonua o Ho_naunau, HI (1955/1978): 420. Until 1819, a sanctuary for Hawaiians vanquished in battle and for those guilty of crimes or breaking taboos.

Reconstruction Era, SC (2017/2019): 16. Beaufort Co. sites that tell the story of how formerly enslaved people were integrated into free society.

Rosie the Riveter WWII Home Front, Richmond, CA (2000): 145. Site of shipyard that employed thousands of women during WWII; commemorates women who worked in wartime industries.

Saint-Gaudens, Cornish, NH (1964/2019): 191. Home, studio, and gardens of sculptor Augustus Saint-Gaudens.

Ste. Geneviève, MO (2020): 17. First permanent European settlement in state.

Salt River Bay (and Ecological Preserve), St. Croix, VI (1992): 989. Only known site where, in 1493, members of a Columbus party landed on what is now U.S. territory.

San Antonio Missions, TX (1978): 990. Four Spanish missions, 18th-cent. irrigation system.

San Francisco Maritime, CA (1988): 50. Artifacts, photographs, and historic vessels related to development of the Pacific Coast.

San Juan Island, WA (1966): 2,146. Commemorates peaceful relations between U.S., Canada, and Great Britain since the 1872 boundary disputes.

Saratoga, NY (1938): 3,608. Scene of a major 1777 battle that became a turning point in the American Revolution.

Sitka, AK (1910/1972): 116. Scene of Tlingit Indians' last major resistance to Russian colonizers, 1804.

Thomas Edison, West Orange, NJ (1955/2009): 21. Inventor's home and laboratory.

Tumacacori, AZ (1908/1990): 360. Historic Spanish mission building near site first visited by Father Kino in 1691.

Valley Forge, PA (1976): 3,469. Continental Army campsite in 1777-78 winter.

War in the Pacific, GU (1978): 2,031. Seven units illustrating the Pacific theater of WWII.

Weir Farm, CT (1990/2021): 74. Home and studio of American impressionist painter J. Alden Weir.

Women's Rights, NY (1980): 7. Where Lucretia Mott, Elizabeth Cady Stanton, and others organized movement in 1848.

National Battlefields/Parks/Sites

Antietam, MD (1890/1978): 3,229. Battle here ended first Confederate invasion of North, Sept. 17, 1862.

Big Hole, MT (1910/1963): 976. Site of major battle with Nez Perce Indians, Aug. 9-10, 1877.

Brices Cross Roads, Baldwin, MS (1929): 1. Site of Confederate victory, June 10, 1864.

Cowpens, SC (1929/1972): 842. American Revolution battlefield, Jan. 17, 1781.

Fort Donelson, TN-KY (1928/1985): 1,319. Site of first major Union victory, Feb. 16, 1862.

Fort Necessity, PA (1931/1961): 903. Site of first battle of French and Indian War, July 3, 1754.

Kennesaw Mountain, GA (1917/1935): 2,914. Site of major battle of Atlanta campaign in Civil War.

Manassas, VA (1940): 5,073. Scene of two Civil War battles.

Monocacy, MD (1934/1976): 1,647. Civil War battle in defense of Washington, DC, fought here, July 9, 1864.

Moore's Creek, Currie, NC (1926/1980): 88. Commemorates Feb. 27, 1776, battle between Patriots and Loyalists.

Petersburg, VA (1926/1962): 9,351. Scene of Union campaigns, 1864-65.

Richmond, VA (1936): 8,143. Site of battles defending Confederate capital.

River Raisin, Monroe, MI (2010): 42. Site of major battles of War of 1812.

Stones River, TN (1927/1960): 709. Scene of federal offensive to trisect Confederacy, Dec. 31, 1862-Jan. 2, 1863.

Tupelo, MS (1929/1961): 1. Site of crucial battle over Union Gen. Sherman's supply line, July 14-15, 1865.

Wilson's Creek, MO (1960/1970): 2,422. Site of second major Civil War battle, Aug. 10, 1861, for control of Missouri.

National Military Parks

Chickamauga and Chattanooga, GA-TN (1890): 9,523. Where Gen. Sherman and Union armies gained control of TN, 1863.

Fredericksburg and Spotsylvania, VA (1927/1933): 8,405. Sites of several major Civil War battles and campaigns.

Gettysburg, PA (1895/1933): 6,032. Site of decisive Confederate defeat in North, July 1863, and of Gettysburg Address.

Guilford Courthouse, NC (1917/1933): 254. American Revolution battle site.

Horseshoe Bend, AL (1956): 2,040. On Tallapoosa River, where Gen. Andrew Jackson broke power of Upper Creek Indian Confederacy on Mar. 27, 1814.

Kings Mountain, SC (1931/1933): 3,945. Site of American Revolution battle fought on Oct. 7, 1780.

Pea Ridge, AR (1956): 4,300. Civil War battle, Mar. 7-8, 1862.

Shiloh, TN-MS (1894/1933): 9,322. Major Civil War battle site, Apr. 6-7, 1862; incl. Shiloh Indian burial mounds.

Vicksburg, MS-LA (1899/1933): 2,524. Union victory gave North control of Mississippi and split Confederate forces.

National Memorials

Arkansas Post, AR (1960): 758. First permanent French settlement in lower Mississippi River valley.

Arlington House, The Robert E. Lee Memorial, VA (1925/1972): 17. Lee's home overlooking the Potomac River.

Chamizal, El Paso, TX (1966/1974): 55. Commemorates 1963 settlement of 99-year border dispute with Mexico.

Coronado, AZ (1941/1952): 4,830. Commemorates first European exploration of the Southwest.

De Soto, Bradenton, FL (1948): 30. Commemorates 16th-cent. Spanish explorations.

Dwight D. Eisenhower Memorial, Washington, DC (2020): 3.39. Honors his role as Supreme Commander of the Allied Expeditionary

Force in WWII and as 34th pres.

Federal Hall, New York, NY (1939/1955): 0.45. First seat of U.S. government under the Constitution.

Flight 93, Shanksville, PA (2002): 2,263. Commemorates passengers and crew of Flight 93, who died thwarting an attack on Sept. 11, 2001.

Fort Caroline, Jacksonville, FL (1950): 138. On St. Johns River, site of first attempt by France, in 16th cent., at permanent North American settlement.

Franklin Delano Roosevelt Memorial, DC (1982): 8. Statues of Pres. Roosevelt and Eleanor Roosevelt; waterfalls and gardens.

General Grant, New York, NY (1958): 0.76. Tomb of Ulysses Grant and wife; largest mausoleum in U.S.

Hamilton Grange, New York, NY (1962): 1.75. Home of Alexander Hamilton.

Johnstown Flood, PA (1964): 178. Commemorates 1889 flood.

Korean War Veterans Memorial, DC (1986/1995): 1.56. Honors those who served in the Korean War.

Lincoln Boyhood, Lincoln City, IN (1962): 200. Site of Abraham Lincoln's boyhood home and grave site of his mother.

Lincoln Memorial, DC (1911/1933): 7. Marble statue of 16th president.

Lyndon Baines Johnson Memorial Grove on the Potomac, DC (1973): 17. Overlooks Potomac River; vista of the Capitol.

Martin Luther King Jr., DC (1996): 2.74. Granite statue of Dr. King close to where he delivered "I Have a Dream" speech.

Mount Rushmore, SD (1925): 1,278. Heads of presidents Washington, Jefferson, Lincoln, T. Roosevelt sculpted into mountain.

Pearl Harbor, HI (2019): 22. Site of Dec. 7, 1941, Japanese attack.

Perry's Victory and International Peace Memorial, Put-in-Bay, OH (1936/1972): 25. World's most massive Doric column promotes pursuit of peace through arbitration and disarmament.

Port Chicago Naval Magazine, Danville, CA (2009): 5. Where 1944 munitions ship explosion killed 320 men.

Roger Williams, Providence, RI (1965): 4.56. Memorial to founder of Rhode Island.

Thaddeus Kosciuszko, Philadelphia, PA (1972): 0.02. Memorial to Polish hero of American Revolution.

Theodore Roosevelt Island, DC (1932/1933): 89. Statue of Roosevelt in wooded island sanctuary.

Thomas Jefferson Memorial, DC (1934/1943): 18. Statue of Jefferson in an inscribed circular, colonnaded structure.

Vietnam Veterans Memorial, DC (1980): 2.18. Black granite wall with names of those missing or killed in action in Vietnam War.

Washington Monument, DC (1876/1933): 106. Obelisk honoring the first U.S. president. Construction began in 1848 with private funding.

World War I Memorial, DC (1981/2014): 1.39. Formerly Pershing Park, dedicated to Gen. John J. Pershing.

World War II Memorial, DC (1993/2004): 8. Oval plaza with central pool commemorating those who fought and died.

Wright Brothers, Kill Devil Hills, NC (1927/1953): 428. Site of first powered flight, by Orville and Wilbur Wright.

National Historic Sites

Allegheny Portage Railroad, PA (1964): 1,284. Linked Pennsylvania Canal system and the West.

Andersonville, GA (1970): 516. Civil War POW camp.

Andrew Johnson, Greeneville, TN (1935/1963): 17. Two homes, his tailor shop, and cemetery where 17th U.S. president is buried.

Bent's Old Fort, CO (1960): 799. Replica of fort on Sante Fe Trail.

Boston African-American, MA (1980): 0.59. Pre-Civil War Black-owned structures.

Carl Sandburg Home, Flat Rock, NC (1968): 268. Home of Pulitzer Prize-winning poet and biographer.

Carter G. Woodson Home, DC (1976/2006): 0.15. Home of "Father of Black History."

Charles Pinckney, Mt. Pleasant, SC (1988): 28. Farm of a principal author and signer of the Constitution.

Christiansted, St. Croix, VI (1952/1961): 27. Preserves historic structures from time of Danish colony.

Clara Barton, Glen Echo, MD (1974): 9. Home of American Red Cross founder.

Edgar Allan Poe, Phila., PA (1978/1980): 0.52. Writer's home.

Eisenhower, Gettysburg, PA (1967): 690. Home of 34th pres.

Eleanor Roosevelt, Hyde Park, NY (1977): 181. Former first lady's personal retreat.

Eugene O'Neill, Danville, CA (1976): 13. Home where playwright wrote his final plays, incl. *The Iceman Cometh*.

First Ladies, Canton, OH (2000): 0.46. Home of first lady Ida Sexton McKinley. Library now devoted to U.S. first ladies.

Ford's Theatre, DC (1866/1970): 0.3. Incl. theater where Lincoln was assassinated, house where he died, and Lincoln Museum.

Fort Bowie, AZ (1964): 999. Focal point of operations against Geronimo and Apaches.

Fort Davis, TX (1961): 523. Frontier outpost in West Texas; established to guard the San Antonio-El Paso Road.

Fort Laramie, WY (1938/1960): 873. Military post on Oregon Trail.

Fort Larned, KS (1964/1966): 718. Military post on Santa Fe Trail.

Fort Point, CA (1970): 29. West Coast fortification; protected San Francisco during and after Civil War.

Fort Raleigh, NC (1941): 516. First attempted English settlement in North America.

Fort Scott, KS (1965/1978): 20. Commemorates U.S. frontier. Focal point of Black troop activity, training during Civil War.

Fort Smith, AR-OK (1961): 75. One of the earliest U.S. posts in Missouri Territory, active 1817-96.

Fort Union Trading Post, MT-ND (1966): 440. Principal fur-trading post on upper Missouri, 1829-67.

Fort Vancouver, WA-OR (1948/1961): 207. Headquarters for Hudson's Bay Company.

Frederick Douglass, DC (1962/1988): 9. Home of Black abolitionist, writer, orator.

Frederick Law Olmsted, Brookline, MA (1979): 7. Home of city planner, famous for designing Central Park in NYC.

Friendship Hill, PA (1978): 675. Home of Albert Gallatin, Jefferson's and Madison's secretary of treasury.

Grant-Kohrs Ranch, MT (1972): 1,618. Ranch house owned by John Grant, 19th-cent. range-cattle industry pioneer.

Hampton, Towson, MD (1948): 62. 18th-cent. Georgian mansion, which in 1790 was largest house in U.S.

Harry S Truman, Independence, MO (1982/1983): 13. House of 33rd pres. from 1919 on and farm where he worked as young man.

Herbert Hoover, West Branch, IA (1965): 187. Birthplace and boyhood home of 31st president.

Home of Franklin D. Roosevelt, Hyde Park, NY (1944): 838. FDR's birthplace, home, and "summer White House."

Honouliuli, HI (2015/2019): 154. Camp where POWs and civilians suspected of disloyalty—mostly Americans of Japanese ancestry—were imprisoned during WWII.

Hopewell Furnace, PA (1938/1985): 848. 19th-cent. iron-making village.

Hubbell Trading Post, AZ (1965): 160. Oldest continuously operating trading post in SW; founded in 1878 on Navajo Nation.

James A. Garfield, Mentor, OH (1980): 8. Home of 20th president; site of his front-porch campaign.

John Fitzgerald Kennedy, Brookline, MA (1967): 0.09. Birthplace and childhood home of 35th president.

John Muir, Martinez, CA (1964): 344. Home of Sierra Club co-founder and "Father of the National Park Service."

Knife River Indian Villages, ND (1974): 1,751. Remnants of villages last occupied by Hidatsa and Mandan Indians.

Lincoln Home, Springfield, IL (1971): 12. Lincoln's residence when he was elected 16th president, 1860.

Little Rock Central High School, AR (1998): 28. Commemorates 1957 desegregation during which federal troops were called in to protect nine Black students.

Longfellow House—Washington's Headquarters, Cambridge, MA (1972/2010): 1.98. Poet's home, 1837-82; Washington's

headquarters during Boston siege, 1775-76.

Maggie L. Walker, Richmond, VA (1978): 1.29. Home of Black leader and first female bank president, daughter of former slave.

Manzanar, Lone Pine, CA (1992): 814. Manzanar War Relocation Ctr., a WWII Japanese-American internment camp.

Martin Van Buren, Kinderhook, NY (1974): 285. Lindenwald, home of 8th president.

Mary McLeod Bethune Council House, DC (1982/1991): 0.07. Commemorates Bethune's leadership in the Black women's movement.

Minidoka, ID (2001/2008): 396. WWII Japanese internment ctr.

Minuteman Missile, SD (1999): 44. Missile launch facilities dating to Cold War era.

Nicodemus, KS (1996): 4.39. Only remaining Western town established by African Americans during Reconstruction.

Ninety Six, SC (1976): 1,022. Colonial trading village and site of Gen. Nathanael Greene's siege on Loyalist-held fort in 1781.

Pennsylvania Avenue, DC (1965/1996): 18. Incl. area between Capitol and White House, encompassing U.S. Navy Memorial, Freedom Plaza, Old Post Office Pavilion, other sites.

President William Jefferson Clinton Birthplace Home, Hope, AR (2010): 0.68. Birthplace and early home of 42nd pres.

Pu'ukohola_ Heiau, Kawaihae, HI (1972): 86. Ruins of temple built by King Kamehameha, first king of united Hawaiian islands.

Sagamore Hill, Oyster Bay, NY (1962): 83. Home of Pres. Theodore Roosevelt from 1885 until his death in 1919.

Saint Paul's Church, Mount Vernon, NY (1943/1978): 6. One of the oldest parishes (1665-1980) in New York State.

Salem Maritime, MA (1938): 9. Major fishing and whaling port famous for 1692 witchcraft trials.

San Juan, PR (1949): 75. 16th-cent. Spanish fortifications.

Sand Creek Massacre, CO (2000): 12,583. Site where around 230 Cheyenne and Arapaho Indians—mostly women, children, and elderly—were killed by U.S. soldiers in 1864.

Saugus Iron Works, MA (1974): 9. Reconstructed 17th-cent. colonial ironworks.

Springfield Armory, MA (1974): 55. Small-arms manufacturing center for nearly 200 years.

Steamtown, Scranton, PA (1986): 62. Rail yard, roadhouse, repair shops of former Delaware, Lackawanna & Western Railroad.

Theodore Roosevelt Birthplace, New York, NY (1962): 0.11. Reconstructed brownstone where 26th president was born.

Theodore Roosevelt Inaugural, Buffalo, NY (1966): 1.18. Wilcox House, where 26th president took oath of office, 1901.

Thomas Stone, Port Tobacco, MD (1978): 328. Haberdeventure, home of signer of Declaration of Independence.

Tuskegee Airmen, AL (1998): 90. Airfield where pilots of all-Black WWII air corps unit received flight training.

Tuskegee Institute, AL (1974): 58. College founded by Booker T. Washington in 1881 for Black students.

Ulysses S. Grant, St. Louis, MO (1989): 10. Home of Grant during pre-Civil War years.

Vanderbilt Mansion, Hyde Park, NY (1940): 212. Mansion of 19th-cent. financier.

Washita Battlefield, OK (1996): 315. Scene of Nov. 27, 1868, battle between Plains tribes and U.S. army.

Whitman Mission, Walla Walla, WA (1936/1963): 139. Site of Protestant missionaries to Cayuse Indians beginning in 1830s.

William Howard Taft, Cincinnati, OH (1969): 3.64. Birthplace and early home of 27th president.

National Wild and Scenic Rivers

Rivers in this system are designated by Congress or the Sec. of the Interior. As of Mar. 2019 (the last designation), the system included 13,417 miles of 226 rivers in 41 states and Puerto Rico. Not all of the rivers that the NPS administers are official units of the park system. Only official NPS units are listed here.

NA = Not available. (1) Year established or current designation received. (2) No federal facilities; state services may be available. (3) Located on Gila River Indian Reservation; not open to the public. (4) Incl. acreage added in 1988 expansion. (5) Shasta and Trinity units are administered by the Forest Service. Figure given is NPS acreage only. (6) Figure given includes acreage administered by U.S. Fish and Wildlife Service. (7) Comprises the Lower Delaware Wild and Scenic (2000) and Middle Delaware Scenic, whose year and acreage are given in table. (8) Incl. Lower Saint Croix acreage added in 1972.

National Trails System

Source: National Park Service and Bureau of Land Management, U.S. Dept. of the Interior; U.S. Forest Service, USDA

As of mid-2022, the National Trails System included 11 national scenic trails, 19 national historic trails, almost 1,300 national recreation trails, and 7 connecting and side trails. National scenic trails and national historic trails are established by Congress and administered by the NPS, Forest Service, or BLM. Official NPS units are indicated by an asterisk.

National Heritage Areas

Source: National Park Service (NPS), U.S. Dept. of the Interior;
Alliance of National Heritage Areas

National Heritage Areas (NHAs) are designated by Congress for their national importance. NHAs are not units of the National Park system, though the NPS advises and provides limited financial assistance. NHC = Natl. Heritage Corridor. As of mid-2022.

Attractions in and Around Washington, DC

Most attractions are free. Hours are subject to change, especially on holidays, when some attractions may be closed. For a free official visitors guide and map, visit washington.org or call Destination DC at 1-800-422-8644. **Note:** As of mid-2022, attractions had specific safety guidelines due to COVID-19. The visitation information given

below is for normal circumstances. Visit the website for updated visitor information on each individual attraction.

Arlington

Arlington National Cemetery, on the former Custis-Lee estate in Arlington, VA, was first used as a burial site during the Civil War. It is the final resting place of Pres. William Howard Taft and Pres. John F. Kennedy and his wife, Jacqueline Bouvier Kennedy Onassis. More than 400,000 U.S. military personnel from every major war are buried at Arlington. The **Tomb of the Unknown Soldier**, dedicated in 1921, is guarded by soldiers 24 hrs. a day. Unknowns from World War I, World War II, and Korea are interred in the plaza. (Vietnam Unknown was exhumed in 1998 and identified through DNA testing.)

A number of monuments and memorials are located throughout the 639-acre cemetery. They include the **Military Women's Memorial** (dedicated 1997), which honors the more than 3 mil women who have served or currently serve in the U.S. military.

Open daily 8 AM-5 PM (8 AM-7 PM, Apr.-Sept.). Arlington, VA; (877) 907-8585. **Website:** www.arlingtoncemetery.mil

The **U.S. Marine Corps War Memorial** stands north of Arlington National Cemetery. A bronze statue depicts the raising of the U.S. flag on Mt. Suribachi, Feb. 23, 1945, during the WWII battle of Iwo Jima. The memorial grounds are open daily 6 AM-midnight; (703) 235-1530.

Website: www.nps.gov/gwmp/planyourvisit/usmc_memorial.htm

Bureau of Engraving and Printing

The Bureau of Engraving and Printing of the U.S. Treasury Dept. is the headquarters for the making of U.S. paper money. Free public tours are offered Mon.-Fri., 9 AM-6 PM (same-day tickets required Mar.-early Sept.). 14th and C Sts. SW; (866) 874-2330. **Website:** www.moneyfactory.gov

The Capitol

The United States Capitol was originally designed by Dr. William Thornton, an amateur architect, whose submission in 1793 won him

\$500 and a city lot. Three other architects designed or supervised construction of the Capitol before its completion.

The present cast-iron dome at its greatest exterior height measures 135 ft, 5 in. and is topped by the bronze Statue of Freedom, which stands 19 ½ ft and weighs 15,000 lbs. On its base are the words *E Pluribus Unum* (out of many, one).

The Capitol Visitor Center is open to the public Mon.-Fri., 9 AM-3 PM. Free guided tours are available by advance reservations. The Senate and House galleries are not part of the tour. To enter either gallery or to observe Congress in session, those living in the U.S. may obtain tickets from their U.S. representative or senators. Visitors from other countries may inquire at the House and Senate appointment desks. Between Constitution and Independence Aves., bounded by First St.; (202) 226-8000. **Website:** www.visitthecapitol.gov

Federal Bureau of Investigation

The Federal Bureau of Investigation discontinued tours of its headquarters following the Sept. 11, 2001, terrorist attacks. A self-guided tour called the FBI Experience opened in 2017. Open 9 AM-4:30 PM Mon.-Fri.; visits must be arranged at least four weeks in advance through the office of one's congressional delegate. J. Edgar Hoover Bldg., Pennsylvania Ave., between 9th and 10th Sts. NW; (202) 324-3000. **Website:** www.fbi.gov

Folger Shakespeare Library

The Folger Shakespeare Library, on Capitol Hill, is a research institution with the world's largest collection of Shakespearean materials and other rare books and manuscripts of the Renaissance period. The building closed to the public in 2020 for renovations, with completion expected in 2023. 201 E. Capitol St. SE; (202) 544-4600. **Website:** www.folger.edu

Holocaust Memorial Museum

The U.S. Holocaust Memorial Museum (opened 1993) documents the Holocaust through artifacts and interactive videos

and educates the public on other genocides. The permanent exhibition is recommended for visitors age 11 and up.

The museum is open daily, 10 AM-5:30 PM. Entry into the permanent exhibition is timed, Mar. through Aug. Timed passes are available at the door each day on a first-come, first-served basis; advance passes can be ordered online for a fee. 100 Raoul Wallenberg Pl. SW; (202) 488-0400. **Website:** www.ushmm.org

Jefferson Memorial

Dedicated Apr. 13, 1943, the Thomas Jefferson Memorial stands on the south shore of the Tidal Basin in West Potomac Park. The circular stone structure combines architectural elements of the dome of the Pantheon in Rome and the rotunda designed by Jefferson for the Univ. of Virginia.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. Ohio and E. Basin Drs. SW; (202) 426-6841. **Website:** www.nps.gov/thje/

Kennedy Center

The John F. Kennedy Center for the Performing Arts opened in 1971. Designed by Edward Durell Stone, it includes an opera house, concert hall, theaters, restaurants, and a library. Free tours available Mon.-Fri., 10 AM-5 PM, and Sat.-Sun., 10 AM-1 PM. 2700 F St. NW; (800) 444-1324. **Website:** www.kennedy-center.org

Martin Luther King Jr. Memorial

The MLK, Jr. Memorial (dedicated 2011) features a 30-ft figure of Dr. King, sculpted by artist Lei Yixin, emerging from a block of granite. The memorial is located on the Tidal Basin, between the Lincoln and Jefferson Memorials.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. Independence Ave. SW and West Basin Dr. SW; (202) 426-6841. **Website:** www.nps.gov/mlkm/

Korean War Veterans Memorial

The Korean War Veterans Memorial, dedicated 1995 at the Mall's west end, features a multiservice formation of 19 combat-ready

soldiers in ponchos. A granite wall, with images of service members, juts into the Pool of Remembrance.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. Independence Ave. SW and French Dr. SW; (202) 426-6841.

Website: www.nps.gov/kowa/

Library of Congress

Established by and for Congress in 1800, the Library of Congress extends its services to other government agencies and libraries, scholars, and the public. It contains more than 173 mil items in 470 languages, making it the world's largest library collection.

The Thomas Jefferson Building (Main Reading Room and exhibition galleries) is open Mon.-Sat., 8:30 AM-4:30 PM. The James Madison Memorial and John Adams Buildings have longer hours. First St. SE between Independence Ave. SE and East Capitol St.; (202) 707-8000. **Website:** www.loc.gov

Lincoln Memorial

Designed by Henry Bacon and dedicated in 1922, the Lincoln Memorial in West Potomac Park is a large marble hall enclosing a statue, designed by Daniel Chester French, of Abraham Lincoln seated in an armchair. The text of the Gettysburg Address is engraved in the south chamber, that of Lincoln's second inaugural speech in the north chamber.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. Independence Ave. and French Dr. SW; (202) 426-6841. **Website:** www.nps.gov/linc/

Mount Vernon

Mount Vernon, George Washington's estate, is about 15 mi from Washington, DC, in northern Virginia. A one-and-a-half story house was first built on the site by Washington's father, Augustine Washington, in 1734. In 1754, George Washington began running and expanding the estate, named after Adm. Edward Vernon by Washington's half-brother Lawrence. The estate has been restored

to its 18th-cent. appearance. Washington and his wife, Martha, are buried on the grounds.

Open all year; hours vary seasonally. Mount Vernon, VA; (703) 780-2000. Admission: adults \$28, youth (6-11) \$15, ages 5 and under free. **Website:** www.mountvernon.org

National Archives and Records

Original copies of the Declaration of Independence, the Constitution, and the Bill of Rights are on display at the National Archives Museum. The National Archives also holds other U.S. government records, historic maps, photographs, and manuscripts.

The museum is open daily 10 AM-5:30 PM. Constitution Ave. bet. 7th and 9th Sts. NW; (202) 357-5061. **Website:** www.archives.gov

National Gallery of Art

The National Gallery of Art, established by Congress, opened in 1941. The original West Building was designed by John Russell Pope. The East Building, opened in 1978, was designed by I. M. Pei. Galleries are open 10 AM-5 PM. Constitution Ave NW between 3rd and 9th Sts.; (202) 737-4215. **Website:** www.nga.gov

National World War II Memorial

The National WWII Memorial, opened in 2004, is dedicated to the approx. 16 mil veterans who served and the more than 400,000 who died in the war. The 8.25-acre site is at the east end of the Lincoln Memorial Reflecting Pool.

The 43-ft archways at the north and south entrances represent the Atlantic and Pacific theaters. A wall of 4,048 gold stars, each representing 100 American deaths, stands in an oval plaza surrounded by 56 pillars standing for the states, territories, and the Dist. of Columbia.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. 17th St. and Independence Ave. SW; (202) 426-6841. **Website:** www.nps.gov/wwii/

The Pentagon

The Pentagon, headquarters of the Dept. of Defense, is the largest low-rise office building in the U.S. It houses some 26,000 employees in offices occupying 3,705,793 sq ft. The building was severely damaged when struck by a plane on Sept. 11, 2001.

Tours are free and available to U.S. citizens on Tuesdays and Thursdays at 10 AM and 1 PM. Reservations must be made at least two weeks in advance. The approximately one-hour tour covers about 1 ½ miles. Arlington, VA; (703) 697-1776. **Website:** www.defense.gov/Pentagon-Tours/Request-A-Tour/

Franklin Delano Roosevelt Memorial

Opened in 1997, the FDR Memorial features four spaces with bronze statues and panels depicting FDR through his four terms in office. The 8.14-acre memorial is on the Tidal Basin.

Open daily with staff on grounds 9:30 AM-10 PM. Ohio and W. Basin Drs. SW; (202) 426-6841. **Website:** www.nps.gov/frde/

Smithsonian Institution

The Smithsonian Institution, established in 1846, is the world's largest museum and research complex. It holds some 157.1 mil artifacts and specimens in its trust. Seventeen of its 19 museums and the **National Zoo** are in the DC area. The **Smithsonian Institution Building** (or The Castle) houses the Smithsonian Visitor Center. Also on the National Mall are the **National Museum of African American History and Culture**, the **National Museum of African Art**, the **National Air and Space Museum**, **National Museum of American History**, the **National Museum of the American Indian**, the **Arts and Industries Building** (a special-events space), the **Freer Gallery of Art**, the **Hirshhorn Museum and Sculpture Garden**, the **National Museum of Natural History**, and the **Arthur M. Sackler Gallery**. Located nearby are the **National Postal Museum**, the **Smithsonian American Art Museum**, the **National Portrait Gallery**, and the **Renwick Gallery**. The **Anacostia Community Museum** is in SE DC. The Air and Space Museum's **Udvar-Hazy Center** is near Dulles Airport in Virginia.

Most museums are open daily, 10 AM-5:30 PM (later in summer); (202) 633-1000. **Website:** www.si.edu

Vietnam Veterans Memorial

Originally dedicated in 1982, the Vietnam Veterans Memorial recognizes those who served in the Vietnam War. The names of more than 58,000 Americans who lost their lives or remain missing are inscribed on polished black-granite walls arranged to form a V, designed by Maya Ying Lin.

Two additions have been made to Lin's design, the Frederick Hart sculpture *Three Servicemen* (1984), and the Vietnam Women's Memorial (1993), sculpted by Glenna Goodacre, honoring the approx. 11,000 women who served in Vietnam.

The memorial is open 24 hrs. a day and staffed 9:30 AM-10 PM. Constitution Ave. and Bacon Dr. NW; (202) 426-6841. **Website:** www.nps.gov/vive/

Washington Monument

The Washington Monument (dedicated 1885) is a tapering shaft, or obelisk, of white marble, 555 ft, 5 1/8 in. in height and 55 ft, 1 1/2 in. square at the base. Eight small windows, two on each side, are located on the observation deck at the 500-ft level.

The monument is open daily 9 AM-5 PM. 15th St. and Constitution Ave. NW; (202) 426-6841. **Website:** www.nps.gov/wamo/

White House

The White House, the president's residence, stands on 18 acres on the south side of Pennsylvania Ave., between the Treasury and the old Executive Office Building. The sandstone walls, quarried at Aquia Creek, VA, were first made white with lime-based whitewash in 1798, though the name did not become official until 1901.

Free tours of the residence's public areas are available Fri. and Sat., 8 AM-12:30 PM. Tour requests must be made at least 21 but not more than 90 days in advance through one's member of Congress. Foreign visitors may make requests through their embassy. Tours

are scheduled on a first-come, first-served basis. 1600 Pennsylvania Ave. NW; (202) 456-7041. **Website:** www.whitehouse.gov

The White House Visitor Center at 1450 Pennsylvania Ave. NW is open Tues.-Sat., 7:30 AM-4 PM; (202) 208-1631. **Website:** www.nps.gov/whho/

[Click here](#) to return to the Table of Contents.

U.S. HISTORY: CHRONOLOGY OF EVENTS

1492 Christopher Columbus and crew sighted land Oct. 12 in what is now the Bahamas.

1513 Juan Ponce de León explored Florida coast.

1524 Giovanni da Verrazzano led French expedition along coast from Carolina north to Nova Scotia; entered New York Harbor.

1526 San Miguel de Guadalupe, **first European settlement** in what became U.S. territory, was established in the summer off South Carolina coast; abandoned in Oct.

1539 Hernando de Soto landed in Florida May 28; crossed Mississippi River, 1541.

1540 Francisco Vásquez de Coronado explored Southwest north of Rio Grande. **Hernando de Alarcón** reached Colorado River; **García López de Cárdenas** reached Grand Canyon. Others explored California coast.

1562 First French colony in what became U.S. territory founded on Parris Island off South Carolina coast; abandoned, 1564.

1565 St. Augustine, FL, oldest continuously occupied European settlement in U.S., founded Sept. 8 by Pedro Menéndez de Avilés. Spain ceded settlement to U.S. in 1821.

1579 Sir Francis Drake entered San Francisco Bay and claimed region for Britain.

1585 First English colony in America, sponsored by Sir Walter Raleigh, founded on **Roanoke Island**, off North Carolina coast; colony failed.

1587 Second colony attempted on Roanoke Island. Virginia Dare of colony became **first English infant born** in the New World. Settlers of second colony found to have vanished, 1590.

1607 Capt. **John Smith** and 105 cavaliers in three ships landed on Virginia coast and started Jamestown, **first permanent English settlement** in New World.

1609 **Henry Hudson**, English explorer of Northwest Passage, employed by Dutch, sailed into New York Harbor in Sept. and up Hudson to Albany. **Samuel de Champlain** explored Lake Champlain, to the north. Spaniards settled **Santa Fe, NM**.

1619 House of Burgesses, **first representative assembly** in New World, elected July 30 at Jamestown, VA. **Introduction of slavery**: first Black laborers in English North American colonies, brought to Jamestown in Aug. Chattel slavery laws passed in Massachusetts, 1641, and Virginia, 1661.

1620 **Pilgrims**, Puritan separatists, left Plymouth, England, Sept. 16 on *Mayflower*; reached Cape Cod Nov. 19; 103 passengers landed at Plymouth, Dec. 26. **Mayflower Compact**, signed Nov. 11, was agreement to form a self-government. Half of colony died during harsh winter.

1624 Dutch settled in Albany and along Hudson River, establishing the colony of **New Netherland** in May.

1626 Peter Minuit bought **Manhattan** for Dutch West India Co. from Manahatta Indians during summer for goods valued at \$24; named island **New Amsterdam**.

1626: Dutch colonial governor Peter Minuit acquires the island of Manhattan from Native Americans.

1630 Settlement of **Boston** established by Massachusetts colonists led by John Winthrop; Winthrop began *The History of New England*. **William Bradford**, a governor of Plymouth Colony,

began his chronicle *History of Plymouth Plantation (1620-1647)*, first published in entirety in 1856.

1634 Maryland founded as Catholic colony under charter to Lord Baltimore. Act of Toleration passed 1649 provided for religious tolerance.

1635 Boston Latin School, **oldest public school** in continuous existence in U.S., founded Apr. 23.

1636 Roger Williams founded **Providence, RI**, in June, as a democratically ruled colony with separation of church and state. Charter granted, 1644. **Harvard College** founded; oldest institution of higher learning in U.S.

1640 First book printed in America, the so-called *Bay Psalm Book*.

1647 Liberal constitution drafted in Rhode Island. First law in America providing for **free compulsory basic education** enacted in Massachusetts.

1660 British Parliament passed first **Navigation Act** Dec. 1, regulating colonial commerce to suit English needs.

1661 Missionary John Eliot's translation of the New Testament into Algonquian became the **first Bible printed** in North America.

1664 British troops Sept. 8 seized New Netherland from Dutch. Charles II granted New Netherland and city of New Amsterdam to brother, Duke of York; both renamed **New York**. Dutch recaptured colony 1673 but ceded it to Britain Nov. 10, 1674.

1670 Charles Town, SC, founded by English colonists in Apr.

1673 Regular mail service on horseback instituted Jan. 1 between New York and Boston. **Jacques Marquette** and **Louis Jolliet** reached the upper Mississippi and traveled down it.

1674 Future **Salem witch trial** judge Samuel Sewall began renowned diary covering events through 1729.

1676 Bloody **Indian war** in New England ended Aug. 12. King Philip, Wampanoag chief, and Narragansett Indians killed. **Nathaniel Bacon** led planters against autocratic British Gov. Sir William Berkeley, burned Jamestown, VA, Sept. 19. Rebellion collapsed when Bacon died; 23 followers executed.

1678 A book of poetry by **Anne Bradstreet** (first published in Britain) revised and expanded for posthumous publication in Massachusetts. Considered first female poet in American colonies.

1679 Fire destroyed 150 houses in Boston. City imported **first fire engines** from England.

1681 John Bunyan's ***The Pilgrim's Progress*** published in America; became best seller.

1682 René-Robert Cavelier, Sieur de La Salle, claimed lower Mississippi River country for France and called it Louisiana Apr. 9. Had French outposts built in Illinois and Texas, 1684. Killed during mutiny, 1687. Spanish colonists became the **first Europeans to settle Texas**, at site of present-day El Paso.

1683 William Penn signed treaty with Delaware Indians Apr. 23 and made payment for **Pennsylvania** lands. The **first German colonists** in America settled near Philadelphia.

1689 New York's English colonial governor, **Sir Edmund Andros**, resigned after armed uprising in Boston on Apr. 18.

1690 First colonial newspaper, *Publick Occurrences*, published by Benjamin Harris but shut down after one issue for lack of official permission. Harris also published *New England Primer* for use as elementary school textbook. Large-scale **whaling** operations began in Nantucket, MA.

1692 Hysteria over **witchcraft** began in Salem Village (now Danvers), MA; 14 women and 6 men were executed by special court.

1697 *The Essays* of **Sir Francis Bacon**, first published in England in 1597, was published in America; it became a best seller.

1699 Former privateer Capt. **William Kidd** arrested and sent to England; hanged for piracy, 1701. French settlements made in Mississippi, Louisiana.

1702 Legislation enacted making **Church of England** the established church in Maryland.

1704 Indians and French allies attacked **Deerfield**, MA, Feb. 29; killed 40, captured and marched off 100. *Boston News Letter*,

first regular newspaper, started by postmaster John Campbell.

1710 British-colonial troops captured French fort, Port Royal, Nova Scotia, in **Queen Anne's War**, 1702-13. France yielded Nova Scotia by treaty, 1713.

1712 Enslaved Black laborers rebelled against white colonists in New York City Apr. 6 and 9 whites were killed; 40 rebels put on trial and around 20 executed, with 6 committing suicide.

1716 First theater in colonies opened in Williamsburg, VA.

1726 Great Awakening, general revival of evangelical religion, began in colonies.

1731 America's **first subscription library** (paying members could freely borrow books) cofounded in Philadelphia by Benjamin Franklin.

1732 Benjamin Franklin published the **first *Poor Richard's Almanack***; published annually until 1757. Georgia, last of 13 colonies, chartered.

1733 Influenza epidemic swept through New York City and Philadelphia.

1735 Editor **John Peter Zenger** was acquitted of libel Aug. 5 in New York City after criticizing the British governor's conduct in office.

1739 A series of **slave uprisings** put down in South Carolina.

1741 Famous sermon "Sinners in the Hands of an Angry God," delivered July 8 at Enfield, MA, by Jonathan Edwards, one of the most important preachers in the **Great Awakening** religious revival. Danish navigator **Vitus Bering**, commanding Russian expedition, reached Alaska.

1744 King George's War pitted British and colonials versus French. Colonials captured Louisbourg, Cape Breton Isl., Nova Scotia, June 17, 1745. Returned to France 1748 by Treaty of Aix-la-Chapelle.

1752 According to legend, **Benjamin Franklin**, flying kite in thunderstorm, proved lightning is electricity, June 15; invented lightning rod. **Liberty Bell**, cast in England, was delivered to Pennsylvania.

1754 French and Indian War began with Ft. Necessity campaign in Pennsylvania. Skirmish May 28, battle at fort July 3-4. British moved Acadian French from Nova Scotia to Louisiana Oct. 8, 1755. British captured Québec Sept. 18, 1759, in battles in which French Gen. Joseph de Montcalm and British Gen. James Wolfe were killed. Peace pact signed Feb. 10, 1763. French lost Canada and Midwest. Delegates from seven colonies to New York for **Albany Congress**, July 19, approved plan of union by Benjamin Franklin; plan rejected by the colonies.

1757 First streetlights appeared in Philadelphia.

1764 Sugar Act, Apr. 5, placed duties on lumber, foodstuffs in colonies. First law passed by Parliament to specifically raise revenue from colonies, alleviate French and Indian War debts. British enforced this act, unlike with **Molasses Act** of 1733.

1765 Stamp Act, enacted by Parliament Mar. 22, required revenue stamps to help fund royal troops. Nine colonies, at Stamp Act Congress in New York Oct. 7-25, adopted Declaration of Rights. Stamp Act repealed Mar. 17, 1766. **Quartering Act**, requiring colonists to house British troops, went into effect Mar. 24.

1767 Townshend Acts levied taxes on glass, lead, paper, paint, and tea. In 1770 all duties except on tea were repealed.

1770 British troops fired Mar. 5 into Boston mob, killed five including **Crispus Attucks**, a Black man, reportedly leader of group; later called **Boston Massacre**.

1773 East India Co. tea ships turned back at Boston, New York, and Philadelphia in May. Cargo ship burned at Annapolis, Oct. 14; cargo thrown overboard at **Boston Tea Party**, Dec. 16, to protest the tea tax. **First museum** in the colonies was officially established in Charleston, SC; later named the Charleston Museum.

1774 “Intolerable Acts” of Parliament curtailed Massachusetts self-rule; barred use of Boston Harbor until dumped tea was paid for. **First Continental Congress** held in Philadelphia Sept. 5-Oct. 26; called for civil disobedience against British. Rhode Island **abolished slavery**.

1775 Patrick Henry addressed Virginia convention, Mar. 23, said, "Give me liberty, or give me death!" **Paul Revere**, **William Dawes**, and Dr. **Samuel Prescott**, Apr. 18, rode to alert patriots that British were on their way to Concord, MA, to destroy arms. At **Lexington**, MA, Apr. 19, Minutemen lost eight. On return from **Concord**, British suffered 273 casualties. Col. Ethan Allen (joined by Col. Benedict Arnold) captured **Ft. Ticonderoga** in New York, May 10, also Crown Point. Colonials headed for **Bunker Hill** and fortified nearby Breed's Hill, Charlestown, MA. Repulsed British under Gen. William Howe twice before retreating, June 17. Continental Congress June 15 named **George Washington** commander in chief; established a postal system, July 26. Benjamin Franklin became the **first postmaster general**.

1776 Thomas Paine's *Common Sense*, famous pro-independence pamphlet, published Jan. 10; quickly sold some 100,000 copies. France and Spain agreed May 2 to provide arms to U.S. In Continental Congress June 7, Richard Henry Lee (VA) moved "that these United Colonies are, and of right ought to be, free and independent states." Resolution adopted July 2. **Declaration of Independence** approved July 4, signed Aug. 2. Col. William Moultrie's batteries at **Charleston, SC**, repulsed British sea attack June 28. Washington lost **Battle of Long Island** Aug. 27; evacuated New York. **Nathan Hale** executed as spy by British Sept. 22. Brig. Gen. Arnold's Lake Champlain fleet was defeated in **Battle of Valcour Island** Oct. 11, but British returned to Canada. Howe failed to destroy Washington's army at White Plains, NY, Oct. 28. Hessians captured Ft. Washington, Manhattan, and 3,000 men, Nov. 16; captured Ft. Lee, NJ, Nov. 20. Washington, in Pennsylvania, recrossed **Delaware River** Dec. 25-26, defeated Hessians at **Battle of Trenton**, NJ, Dec. 26.

1776: Thomas Jefferson's final draft of the Declaration of Independence eliminated a phrase in an early draft that called slavery an "execrable commerce."

1777 Washington defeated Lord Charles Cornwallis at **Princeton**, NJ, Jan. 3. Continental Congress, June 14, authorized an **American flag**, the Stars and Stripes. Maj. Gen. John Burgoyne's force of 8,000 from Canada captured **Ft. Ticonderoga**, NY, July 6. Americans beat back Burgoyne at Bemis Heights, Oct. 7, cut off British escape route. Burgoyne surrendered 5,000 men at Saratoga, NY, Oct. 17. **Articles of Confederation** adopted by Continental Congress, Nov. 15; took effect Mar. 1, 1781.

1778 France signed treaty of aid with U.S. Feb. 6; sent fleet. British evacuated Philadelphia, June 18.

1779 George Rogers Clark took Ft. Vincennes in what is now Indiana in Feb. **John Paul Jones** on the *Bonhomme Richard* defeated *Serapis* in British North Sea waters, Sept. 23.

1780 Charleston, SC, fell to the British May 12, but Loyalists were defeated in battle of **Kings Mountain**, NC, Oct. 7 in what Thomas Jefferson called "the turn of the tide of success." **Benedict Arnold** found to be a traitor Sept. 23. Arnold escaped, made brigadier general in British army.

1781 Bank of North America, **first commercial bank**, incorporated May 26. Cornwallis retired to **Yorktown, VA**. French fleet under Adm. François-Joseph-Paul, count de Grasse gained control of harbor; Washington's troops and French force led by

Jean Baptiste de Rochambeau arrived near Yorktown, Sept. 28. After long siege, **Cornwallis surrendered** Oct. 19.

1782 New British cabinet agreed in Mar. to **recognize U.S. independence**. Preliminary agreement signed in Paris, Nov. 30. Use of **scarlet letter A**, sewn on clothing or branded on skin of adulterers, discontinued in New England.

1783 Massachusetts Supreme Court decision in final Quock Walker trial **declared slavery illegal**. Newspapers typically published weekly; **first regular daily newspaper**, *Pennsylvania Evening Post*, went on sale in Philadelphia, May 30. Britain, U.S. signed **Paris peace treaty**, Sept. 3, recognizing American independence; Congress ratified it Jan. 14, 1784. Washington ordered army disbanded Nov. 3, bade farewell to his officers at Fraunces Tavern, New York City, Dec. 4.

1784 Thomas Jefferson's proposal to **ban slavery in new territories** after 1802 was narrowly defeated, Mar. 1.

1785 Regular **stagecoach routes** established between Albany, NY; New York City; and Philadelphia.

1786 Delegates from five states at Annapolis, MD, Sept. 11-14 asked Congress to call a **constitutional convention**.

1787 Shays's Rebellion of debt-ridden farmers in Massachusetts failed, Jan. 25. **Constitutional convention** opened in Philadelphia, May 25, with Washington presiding. Constitution accepted by delegates, Sept. 17. Delaware was first state to ratify it, Dec. 7; Pennsylvania and New Jersey followed. **Northwest Ordinance** adopted July 13 by Continental Congress for Northwest Territory, north of Ohio River, west of New York; made rules for statehood and guaranteed freedom of religion, support for schools, no slavery. **Federalist Papers** first appeared in *NY Independent Journal*.

1788 A large fire in **New Orleans**, then a Spanish territory, destroyed much of the city, Mar. 21. **Constitution adopted** June 21 after being ratified by the requisite ninth state (New Hampshire); also ratified by Georgia, Connecticut, Massachusetts, Maryland, South Carolina, Virginia, and New York

throughout the year. **First U.S. senators elected** Sept. 30, from Pennsylvania.

1789 George Washington chosen president by all electors voting (73 eligible, 69 voting, 4 absent); **John Adams**, vice president, got 34 votes. **First Congress** met at Federal Hall, New York City, and declared Constitution in effect, Mar. 4; Washington inaugurated there Apr. 30; **first inaugural ball** held May 7. U.S. **State Dept.** established by Congress July 27. (Thomas Jefferson installed as first secretary of state Feb. 1790.) **War Dept.** created Aug. 7, with Henry Knox as secretary; **Treasury Dept.** created Sept. 2, with Alexander Hamilton to be secretary. **Supreme Court** created by Federal Judiciary Act, Sept. 24; **John Jay** confirmed by Congress as first Supreme Court chief justice, Sept. 26.

1790 First Supreme Court session held Feb. 2 in New York City. Congress, Mar. 1, authorized decennial **U.S. census**. Collection of data took 18 months. **Naturalization Act** (two-year residency) passed Mar. 26. John Carroll consecrated as **first American Catholic bishop**, Aug. 15. Congress met in **Philadelphia**, new temporary capital, Dec. 6.

1791 Bill of Rights, submitted to states, Sept. 25, 1789, went into effect Dec. 15. First Bank of the United States, **first bank chartered by federal government**, established in Philadelphia.

1792 Coinage Act established **U.S. Mint** in Philadelphia, Apr. 2. Gen. “**Mad**” **Anthony Wayne** made commander in Ohio-Indiana area, trained American Legion, established string of forts. Routed Indians at Fallen Timbers on Maumee River, Aug. 20, 1794; checked British at Fort Miami, OH, same year. **White House** cornerstone laid Oct. 13.

1793 Washington inaugurated for second term, Mar. 4, having received 132 electoral votes; **John Adams** again became vice president, having received second highest total, 77. Washington declared **U.S. neutrality**, Apr. 22, in war between Britain and France. Eli Whitney invented **cotton gin** (patented 1794), reviving Southern slavery.

1794 Whiskey Rebellion, western Pennsylvania farmers protesting liquor tax of 1791, suppressed by federal militia in Sept.

Jay's Treaty, controversial treaty with Britain negotiated by John Jay, signed Nov. 19, ratified June 24, 1795. This treaty intended to settle long-standing differences between U.S. and Britain.

1795 U.S. bought peace from **Algerian pirates** by paying \$1 mil ransom for 115 seamen Sept. 5, followed by annual tributes. Gen. Wayne signed **Treaty of Greenville** with Indians, opening Northwest Territory to settlers. Univ. of North Carolina became **first operating state university**.

1796 Washington's farewell address as president delivered Sept. 17. Warned against permanent alliances with foreign powers, big public debt, large military establishment, and devices of "small, artful, enterprising minority."

1797 John Adams inaugurated as second president Mar. 4, having received 71 electoral votes; **Thomas Jefferson** became vice president, having received 68. U.S. frigate *United States* launched at Philadelphia, May 10; **Constellation** at Baltimore, Sept. 7; **Constitution** (Old Ironsides) at Boston, Oct. 21.

1798 Alien and Sedition Acts passed by Federalists June-July; intended to silence political opposition. **War with France threatened** over French raids on U.S. shipping and rejection of U.S. diplomats. Navy (45 ships) and 365 privateers captured 84 French ships. USS *Constellation* took French warship *Insurgente*, 1799. Napoleon stopped French raids after becoming first consul.

1800 Federal government moved to **Washington, DC**.

1801 John Marshall named Supreme Court chief justice, Jan. 20. **Thomas Jefferson**, who had received same number of electoral votes as Aaron Burr in 1800 election, won out over Burr in House vote Feb. 17; Burr named vice president. **Tripoli declared war** June 10 against U.S., which refused added tribute to commerce-raiding Arab corsairs. Land and naval campaigns forced Tripoli to negotiate peace, June 4, 1805. **Oldest U.S. art institution**, Pennsylvania Academy of Fine Arts, founded in Philadelphia.

1802 Congress established U.S. Military Academy at **West Point, NY**.

1803 Supreme Court, in ***Marbury v. Madison***, overturned U.S. law for first time, Feb. 24. Napoleon sold all of Louisiana, stretching to Canadian border, to U.S. for \$11.25 mil in bonds, plus \$3.75 mil indemnities to American citizens with claims against France. U.S. took title Dec. 20. **Louisiana Purchase** doubled U.S. area.

1804 Meriwether Lewis and **William Clark** expedition ordered by Pres. Thomas Jefferson to explore what is now Northwest U.S. Started from St. Louis May 14; ended Sept. 23, 1806, back in St. Louis. Vice Pres. **Aaron Burr** shot Alexander Hamilton in duel July 11 in Weehawken, NJ; Hamilton died next day.

1804-06: Meriwether Lewis, William Clark, and the Corps of Discovery—including indispensable guide Sacagawea—explored the Missouri and Columbia Rivers from St. Louis to the Pacific Ocean and back.

1805 U.S. Marines aided by Arab mercenaries, Apr. 27, captured Tripolitan port of Derna. Major victory in war against **Barbary pirates**; inspiration for “to the shores of Tripoli” in Marines Corps hymn.

1807 Robert Fulton made **first practical steamboat trip**; left New York City Aug. 17 and reached Albany, NY, 150 mi away, in 32 hr. **Embargo Act** banned all trade with foreign countries, forbidding ships to set sail for foreign ports Dec. 22.

1808 Legislation **outlawing slave imports** goes into effect. Some 250,000 people were illegally imported as slaves, 1808-60.

1810 Third U.S. Census found population of 7,239,881. The enslaved population was put at 1,191,364 and the population of all other non-white free persons at 186,446.

1811 Indiana Territory governor William Henry Harrison defeated Indians led by Tenskwatawa, called the Prophet, in **Battle of Tippecanoe**, Nov. 7. Construction began on **Cumberland Road** in Cumberland, MD; road became important route to West. About 400 **slaves revolted** in Louisiana and marched on New Orleans. The insurrection was suppressed; two whites, some 75 slaves killed.

1812 War of 1812 had three main causes: Britain seized U.S. ships trading with France; Britain had seized 4,000 naturalized U.S. sailors by 1810; Britain armed Indians, who raided Western border. U.S. stopped trade with Europe 1807 and 1809. Trade with Britain only was stopped 1810. Unaware that Britain had raised blockade against France two days before, **Congress declared war** June 18. British took **Detroit** Aug. 16.

1813 Oliver H. Perry defeated British fleet at **Battle of Lake Erie**, Sept. 10. U.S. won **Battle of the Thames**, Ontario, Oct. 5, but failed in Canadian invasion attempts. York (Toronto) and Buffalo, NY, were burned.

1814 Troops under Andrew Jackson defeated Creek Indians led by Chief Weatherford at Battle of Horseshoe Bend in Alabama, Mar. 29, ending **Creek Indian War**, begun a year earlier. British landed in Maryland in Aug., defeated U.S. force Aug. 24, **burned Capitol and White House**. Maryland militia stopped British advance, Sept. 12. British bombardment of Ft. McHenry, Baltimore, for 25 hr., Sept. 13-14, failed, inspiring **Francis Scott Key** to write the words to "**The Star-Spangled Banner**." U.S. won naval **Battle of Lake Champlain** Sept. 11.

Peace treaty with Great Britain signed at Ghent, Belgium, Dec. 24.

1815 Some 5,300 British, unaware of peace treaty, attacked U.S. entrenchments near **New Orleans**, Jan. 8. British had more than 2,000 casualties; Americans lost 71. U.S. flotilla finally ended attacks by **pirates** from Ottoman states of Algiers, Tunis, Tripoli.

1816 Second Bank of the U.S. chartered Apr. 10. The **American Colonization Society**, which sought to address slavery issue by encouraging Black people to migrate to Africa, formed in Washington, DC, Dec. 1816-Jan. 1817.

1817 Thomas Hopkins Gallaudet established the **first free public school for the deaf** in Hartford, CT.

1818 Connecticut expanded **suffrage** among white male voters. Massachusetts followed suit in 1820, and New York in 1821, reducing or eliminating property qualifications.

1819 Spain ceded **Florida** to U.S. Feb. 22. American steamship *Savannah* made first part-steam-powered, part-sail-powered **crossing of Atlantic**, traveling from Savannah, GA, to Liverpool, England, in 29 days. **Washington Irving's** *Sketch Book* became best seller.

1820 First organized immigration of Black people from **U.S. to Africa** began with a group of 86 sailing to Sierra Leone in Feb. Henry Clay's **Missouri Compromise** bill passed by Congress, Mar. 3. Slavery was allowed in Missouri but not west of the Mississippi River, north of 36° 30' (the southern line of Missouri). Compromise repealed 1854.

1821 Emma Willard founded Troy Female Seminary, **first U.S. women's college**. Stephen Austin established **first American community in Texas**, San Felipe de Austin. **James Fenimore Cooper's** *The Spy*, novel set during American Revolution, published and became a best seller.

1822 Tension between sports and academics surfaced when Yale College Pres. Timothy Dwight banned a **primitive form of football**, setting fines for violators.

1823 Monroe Doctrine, opposing European intervention in the Americas, enunciated by Pres. James Monroe Dec. 2. The

Hudson River School, painters who focused on the beauties of nature, began to receive public attention.

1824 Pawtucket, RI, **weavers strike** is first organized factory strike in U.S. and one of earliest known involving women workers.

Slavery abolished in state of Illinois Aug. 2.

1825 After a deadlocked election, **John Quincy Adams** was elected president by the House, Feb. 9. **Erie Canal** opened; first boat left Buffalo, NY, Oct. 26, reached New York City Nov. 4. John Stevens, of Hoboken, NJ, built and operated **first experimental steam locomotive** in U.S.

1826 **Thomas Jefferson** and **John Adams** both died July 4. **James Fenimore Cooper's** *The Last of the Mohicans* published.

1827 Massachusetts became first state to pass a law providing for tax-supported **public high schools**.

1828 Baltimore & Ohio, the **first U.S. passenger railroad**, began operations July 4. South Carolina Dec. 19 declared right of **state nullification of federal laws**, opposing the "Tariff of Abominations." **Noah Webster** published his *American Dictionary of the English Language*.

1829 **Andrew Jackson** inaugurated as president, Mar. 4.

1830 Famous **debate** culminating Jan. 27 between Sen. **Daniel Webster** (MA) and Robert Hayne (SC), on state right to nullify federal law. **Mormon church** organized by Joseph Smith in Fayette, NY, Apr. 6. Pres. Jackson, May 28, signed **Indian Removal Act**, granting president authority to negotiate treaties whereby Indians living east of Mississippi R. give up lands in exchange for lands in West.

1831 William Lloyd Garrison began **abolitionist newspaper** *The Liberator* Jan. 1. **Nat Turner**, an enslaved man in Virginia, led local rebellion, starting Aug. 21; 57 whites killed. Troops called in, 100 rebellion participants killed. Turner captured, tried, and hanged Nov. 11.

1832 **Black Hawk War** in Illinois and Wisconsin Apr.-Sept. pushed Sauk and Fox Indians west across Mississippi.

1833 **American Anti-Slavery Society** founded in Philadelphia, Dec. 4. **Oberlin College** became first to adopt

coeducation in U.S.

1835 According to tradition, the **Liberty Bell** cracked July 8 while tolling death of Chief Justice John Marshall. **Seminole Indians** in Florida under Osceola began attacks Nov. 1, protesting forced removal. The unpopular war ended Aug. 14, 1842; most of the Indians sent to Oklahoma. **Texas** proclaimed right to secede from Mexico; **Sam Houston** put in command of Texas army, Nov. 2-4. **Gold** discovered on Cherokee land in Georgia. Indians forced to cede lands, Dec. 20, and to cross Mississippi.

1836 Texans besieged at **Alamo** in San Antonio by Mexicans under Antonio López de Santa Anna, Feb. 23-Mar. 6; entire garrison killed. Texas independence had been declared, Mar. 2. At San Jacinto Apr. 21, Sam Houston and Texans defeated Mexicans. Ralph Waldo Emerson published his first work, *Nature*, espousing his philosophy of **transcendentalism**. Marcus Whitman, H. H. Spaulding, and wives reached Fort Walla Walla on Columbia River, OR, **first white women to cross the Continental Divide**, in the Rocky Mountains.

1838 Cherokee Indians forced to walk “**Trail of Tears**” from southeast U.S. to area in present-day Oklahoma. At least 4,000—nearly one-fifth of Cherokee population—are estimated to have died.

1838: Cherokee population is marched from their home in southeast U.S. to present-day Oklahoma on the “Trail of Tears.”

1841 First emigrant wagon train bound for California, 47 people, left Independence, MO, May 1; reached California Nov. 4.

Edgar Allan Poe published one of the **first American detective stories**, *The Murders in the Rue Morgue*.

1842 Webster-Ashburton Treaty signed Aug. 9, fixing U.S.-Canada border in Maine and Minnesota. **First use of anesthetic** (sulfuric ether gas) in an operation performed by Georgia doctor Crawford Long.

1843 More than 1,000 settlers left Independence, MO, for Oregon May 22, arriving in Oct. via **Oregon Trail**.

1844 First message over first telegraph line sent May 24 by inventor Samuel F. B. Morse from Washington to Baltimore: "What hath God wrought?"

1845 Congress **overrode a presidential veto for the first time**, Mar. 3, after Pres. John Tyler vetoed a tariff bill. Congress of **Texas** voted for annexation by U.S., July 4; Texas admitted to Union, Dec. 29. **Edgar Allan Poe's** poem "The Raven" published.

1846 Mexican War began after Pres. James K. Polk ordered Gen. Zachary Taylor to seize disputed Texan land settled by Mexicans. After border clash, U.S. declared war May 13; Mexico declared war May 23. About 12,000 U.S. troops took Vera Cruz Mar. 27, 1847, and Mexico City Sept. 14, 1847. Treaty signed Feb. 2, 1848, ended war, and Mexico ceded claims to Texas, California, and other territory. Bear flag of **Republic of California** raised by American settlers at Sonoma, June 14. Treaty with Britain June 15 set **Oregon territory** boundary at 49th parallel (extension of existing line). Expansionists had used slogan "54°40' or fight." The term "**manifest destiny**," coined by journalist in 1845, also came into play. **Mormons**, after violent clashes with settlers over polygamy, left Nauvoo, IL, for West under Brigham Young. They settled July 1847 at Salt Lake City, UT. Elias Howe invented **sewing machine**.

1847 First adhesive U.S. postage stamps—Benjamin Franklin 5¢, Washington 10¢—sold July 1. **Henry Wads-worth Longfellow's** *Evangeline* published.

1848 Gold discovered Jan. 24 in California; 80,000 prospectors emigrated in 1849. Lucretia Mott and Elizabeth Cady

Stanton led Seneca Falls, NY, **Women's Rights Convention** July 19-20.

1850 Sen. Henry Clay's **Compromise of 1850** admitted California as 31st state Sept. 9, with slavery forbidden; made Utah and New Mexico territories; made **Fugitive Slave Law** harsher; and ended District of Columbia slave trade. **Nathaniel Hawthorne's** *The Scarlet Letter* published.

1851 **Herman Melville's** *Moby-Dick* published.

1852 **Harriet Beecher Stowe's** *Uncle Tom's Cabin* published.

1853 Japan receives Comm. Matthew C. Perry, July 14. He negotiated treaty to **open Japan** to U.S. ships. New York City hosted **first World's Fair** in the U.S., beginning July 14. **Stephen Foster** published "My Old Kentucky Home."

1854 **Republican Party** formed at Ripon, WI, Feb. 28. Opposed Kansas-Nebraska Act, which left issue of slavery to vote of settlers. Act became law May 30. Treaty ratified with Mexico Apr. 25, providing for **Gadsden Purchase** of a strip of land. **Henry David Thoreau's** *Walden* published.

1855 **First railroad train crossed Mississippi River** on river's first bridge, between Rock Island, IL, and Davenport, IA, Apr. 21. **Walt Whitman's** *Leaves of Grass* published.

1856 Proslavery group sacked **Lawrence, KS**, May 21; abolitionist John Brown led antislavery contingent against Missourians at Osawatomie, KS, Aug. 30. Antislavery Republican Party's **first presidential nominee**, John C. Frémont, defeated by James Buchanan. Abraham Lincoln made 50 speeches for Frémont. **First U.S. kindergarten** opened in Watertown, WI.

1857 In **Dred Scott** case, which involved determination of constitutionality of already-repealed Missouri Compromise, Supreme Court decided Mar. 6 that enslaved individuals did not become free in a free state, and Black persons were not and could not be citizens. **Currier & Ives**, firm of American lithographers, issued their first print.

1858 **First Atlantic cable** completed by Cyrus W. Field Aug. 5. **Lincoln-Douglas debates** in Illinois, Aug. 21-Oct. 15.

1859 Edwin L. Drake drilled the **first commercially productive oil well** near Titusville, PA, Aug. 27. Abolitionist John Brown, with 21 men, seized U.S. armory at **Harpers Ferry**, WV, Oct. 16. U.S. Marines captured raiders, killing several. Brown was hanged for treason Dec. 2.

1860 Shoeworkers in Lynn, MA, went on strike Feb. 22. Within a week, strike spread to include 20,000 shoeworkers throughout New England in country's **largest strike to date**. **First Pony Express** between Sacramento, CA, and St. Joseph, MO, started Apr. 3. Republican **Abraham Lincoln** elected president Nov. 6 in four-way race.

1861 Seven southern states set up **Confederate States of America** Feb. 8, with **Jefferson Davis** as president. **Civil War** began as Confederates fired on **Ft. Sumter** in Charleston, SC, Apr. 12; they captured it Apr. 14. Pres. Lincoln called for 75,000 volunteers Apr. 15. Lincoln blockaded Southern ports Apr. 19, cutting off vital exports and aid. By May, 11 states had seceded. Confederates repelled Union forces at first **Battle of Bull Run**, July 21. **First transcontinental telegraph line** put in operation.

1862 Union forces were victorious in Western campaigns, took New Orleans May 1. Battles in East were largely inconclusive despite heavy casualties. The **Battle of Antietam**, in western Maryland Sept. 17, was bloodiest one-day battle of war; each side lost more than 2,000 men. **Homestead Act**, which granted free farms to settlers, approved May 20. **Land Grant Act**, which provided for public land sale to benefit agricultural education, approved July 7. It eventually led to establishment of state university systems.

1863 Pres. Lincoln issued **Emancipation Proclamation** Jan. 1, freeing "all slaves in areas still in rebellion." Union forces won major victory at Gettysburg, PA, July 1-3. Confederate forces under siege surrendered **Vicksburg, MS**, to Union forces under Gen. Ulysses S. Grant, July 4; control of Mississippi River in Union hands. About 1,000 were killed or wounded in **draft riots** in New York City; white mobs attacked and hanged Black individuals

July 13-16. Pres. Lincoln gave his **Gettysburg Address** Nov. 19. Lincoln declared **Thanksgiving** a national holiday.

1863: President Abraham Lincoln's Emancipation Proclamation frees the enslaved population in seceding states

1864 Gen. **William Tecumseh Sherman** marched through Georgia, taking Atlanta Sept. 1 and Savannah Dec. 22. **Sand Creek massacre** of Cheyenne and Arapaho Indians Nov. 29. Soldiers drove Indians out of village; about 150 killed.

1865 Gen. **Robert E. Lee surrendered** 27,800 Confederate troops to Gen. Grant at Appomattox Court House in VA, Apr. 9. J. E. Johnston surrendered 31,200 to Sherman at Durham Station, NC, Apr. 18. Last rebel troops surrendered May 26. Pres. Lincoln shot Apr. 14 by **John Wilkes Booth** in Ford's Theater, Washington, DC; died the following morning. Vice Pres. **Andrew Johnson** was sworn in as president. Booth was tracked down and fatally wounded, perhaps by his own hand, Apr. 26. Four co-conspirators were hanged July 7. **13th Amendment**, abolishing slavery except as a punishment for crime, ratified Dec. 6.

1866 Congress took control of Southern **Reconstruction**, backed freedmen's rights in legislation vetoed by Pres. Andrew Johnson; veto overridden by Congress, Apr. 9. **Ku Klux Klan** formed secretly in South to terrorize Black residents who voted. Disbanded 1869-71.

1867 **Alaska** sold to U.S. by Russia for \$7.2 mil Mar. 30, through efforts of Sec. of State William H. Seward. Fraternal society the **Grange** was organized Dec. 4 to protect farmer interests. **Horatio Alger's** *Ragged Dick* published.

1868 Pres. Andrew Johnson dismissed Sec. of War Edwin M. Stanton without Senate approval. **Johnson impeached** by the House Feb. 24 for violation of Tenure of Office Act, though charges were actually made in response to his opposition to congressional Reconstruction. He was acquitted by the Senate Mar.-May. **14th Amendment**, providing for citizenship of all persons born or naturalized in U.S. and subject to the jurisdiction thereof, ratified July 9. **Louisa May Alcott's** *Little Women* published. **The World Almanac**, a publication of the *New York World* newspaper, appeared for first time.

1869 First **Transcontinental railroad** completed; golden spike driven at Promontory Summit, UT, May 10, marking junction of Central Pacific and Union Pacific lines. Attempt to "corner" gold led to financial "**Black Friday**" in New York Sept. 24. **Woman suffrage law** passed in Wyoming Territory Dec. 10. **Knights of Labor** labor union formed in Philadelphia. By 1886, it had 700,000 members nationally.

1870 15th Amendment, making race no bar to voting rights, ratified Feb. 8. **First U.S. boardwalk** completed, in Atlantic City, NJ. **U.S. Weather Bureau** founded.

1871 Great Chicago fire destroyed city Oct. 8-11. **National Rifle Association (NRA)** founded.

1872 Amnesty Act May 22 restored civil rights to citizens of the South, except for 500 Confederate leaders. Congress established Yellowstone, **first national park**. James McNeill Whistler painted famous portrait known informally as "**Whistler's Mother**."

1873 First U.S. postal card issued May 1. **Jesse James** and his gang robbed their first passenger train July 21. Banks failed, panic began in Sept. **Depression** lasted five years. "**Boss**" **William Tweed** of New York City was convicted Nov. 19 of stealing public funds; he died in jail in 1878. New York's Bellevue Hospital started **first nursing school**.

Trump, following allegations he had pressured Ukrainian Pres. **Volodymyr Zelenskyy** to investigate dealings of political rival **Joe Biden** and Biden's son Hunter, after temporarily withholding \$400 mil in aid to Ukraine.

U.S. unemployment rate for Sept. fell to 3.5%, lowest since 1969. White House, Oct. 6, announced withdrawal of some U.S. troops from **Syria** in the face of an imminent Turkish assault against **Kurdish** forces allied with the U.S. against ISIS. **ISIS** leader **Abu Bakr al-Baghdadi** was reported killed during U.S. military raid in Syria, Oct. 26. A **Saudi Arabian** military officer in flight training fatally shot three trainees Dec. 7 at U.S. naval base in **Pensacola**, FL; he was killed in gun battle.

On Nov. 15, Trump political adviser **Roger Stone** was convicted on charges stemming from the election-interference probe; Trump later commuted his sentence. A Justice Dept. **watchdog report**, released Dec. 6, found procedural errors in the probe but no evidence of bias against Trump. House Judiciary Committee, Dec. 13, approved articles of **impeachment** against Pres. Trump for **abuse of power** and for **obstruction of Congress**. On Dec. 18 the full House, with no Republican support, passed the first article, 230-197, and the second, 229-198.

Dow closed the year up 22.3%. CDC reported 1,282 cases of **measles** for 2019, largest number since 1992.

2020 U.S. drone strike in Iraq, Jan. 3, killed Iranian Islamic Revolutionary Guard Corps Major Gen. **Qassem Soleimani**; another drone attack, in **Yemen**, disclosed Feb. 6, killed **Qasim al-Raymi**, leader of al-Qaeda in the Arabian Peninsula.

CDC, Jan. 21, announced **first confirmed COVID-19 case** in the U.S., in traveler from China; starting Feb. 2, Trump administration barred U.S. entry for most non-Americans recently in China. Former NBA star **Kobe Bryant** and his daughter Gianna were among nine people killed in helicopter crash in Calabasas, CA, Jan. 26.

After **impeachment trial**, senators on Feb. 5 voted, 52-48, to convict Pres. Trump for abuse of power, and 53-47 for obstruction of Congress, falling short of the needed two-thirds majority.

A federal judge Feb. 11 approved **T-Mobile's** \$26.5 bil deal to acquire rival **Sprint**. **Morgan Stanley** agreed Feb. 20 to purchase **E-Trade** for \$13 bil. **Wells Fargo**, Feb. 21, agreed to pay \$3 bil to end probe into unauthorized accounts under customers' names. **Boy Scouts**, facing sex-abuse suits and waning membership, filed for bankruptcy Feb. 18.

The fatal shooting of unarmed Black jogger **Ahmaud Arbery** (by white pursuers, Feb. 23 in Brunswick, GA; later convicted of murder) and Black woman **Breonna Taylor** (by police in botched raid on her apartment, Mar. 13, in Louisville, KY) fueled widespread protests in support of **Black Lives Matter** movement.

First U.S. **COVID-19 fatality** reported, Feb. 29; the administration declared a national emergency Mar. 13, banned most travel from Europe by non-Americans, and, Mar. 20, began invoking a legal provision to allow immediate expulsion of asylum-seeking migrants as threats to public health. About 186,000 U.S. coronavirus cases were recorded by Mar. 31, with the Northeast, especially New York City, hardest hit; health resources were sharply strained.

U.S. and **Taliban** militants approved pact Feb. 29 calling for all U.S. and coalition forces to leave **Afghanistan** within 14 months, with some 5,000 Taliban prisoners to be freed and a Taliban pledge to end attacks and engage in intra-Afghan talks; Taliban subsequently grew in strength.

Dow fell 2,352 points Mar. 12, a day after World Health Org. declared the coronavirus a **global pandemic**, and 2,997 points Mar. 16, despite action by the Fed cutting its benchmark interest rate. Trump, Mar. 27, signed \$2-tril economic aid and stimulus bill. Dow ended Apr. up 11.1%, but unemployment hit 14.7%, highest since the Great Depression. J. Crew, Neiman Marcus, J. C. Penney, and Hertz declared **bankruptcy** in May.

2020: Demand on food banks and other relief organizations surges amid the coronavirus pandemic and related economic hardships.

Idaho, Mar. 29, became the first state to bar **transgender** girls and women from participating in female sports.

CDC, Apr. 3, urged Americans to wear **face masks**. Trump May 15 announced **Operation Warp Speed**, aimed at facilitating development, manufacture, and distribution of **COVID vaccines**. U.S., May 27-28, became the first country to exceed 100,000 COVID deaths.

On May 25 **Derek Chauvin**, a white **Minneapolis** police officer, knelt on the neck of a prone Black man in custody, **George Floyd**, who died. Demonstrations followed, with instances of arson, looting, and vandalism; Chauvin later convicted of murder. The incident fueled widespread protests in support of **Black Lives Matter**.

2020: Spurred by the death of George Floyd and other Black men and women in dealings with police, protests call for an end to systemic racism.

The shooting of **Jacob Blake**, a Black man, in struggle with police in **Kenosha**, WI, Aug. 23, set off demonstrations in which two protesters were fatally shot by a vigilante claiming self-defense; he was acquitted. Amid clashes between Trump supporters and activists in **Portland**, OR, one man was fatally shot Aug. 29. Unrest erupted in **Philadelphia** Oct. 26-27 following fatal shooting of a Black man by police; over 50 police injured.

SpaceX, May 30, became first private company to launch humans into orbit. **Bayer**, which acquired agricultural giant **Monsanto** in 2018, announced June 24 it would pay over \$10 bil to resolve lawsuits over cancers allegedly caused by the **herbicide Roundup**.

Supreme Court ruled June 15, 6-3, that employers could not discriminate against workers for being **gay or transgender**. Ruling 7-2, July 8, the Court held that private employers could opt out of Affordable Care Act mandate requiring coverage of **contraceptives**, if on religious or moral grounds. On July 6, the Court ruled, 9-0, that states could compel **presidential electors** to vote for candidates they had pledged to support.

Executions of death row inmates for federal crimes resumed July 14, ending informal moratorium begun in 2003. Trump, in Aug.-Sept., announced agreements between **Israel** and **UAE** and **Bahrain** to normalize relations. Supreme Court Justice **Ruth**

Bader Ginsburg died Sept. 18; **Amy Coney Barrett** was confirmed, Oct. 26, to replace her.

More than 3.9 mil acres burnt Aug.-Sept. in California's **wildfire** season; over 30 people died. **GDP** rose an estimated 33.4% in third quarter 2020, having fallen 31.4% in the second quarter.

Federal officials Oct. 8 announced indictment of six people over failed right-wing extremist plot to kidnap Michigan Gov. **Gretchen Whitmer** (D). Justice Dept., Oct. 21 announced **OxyContin** maker **Purdue Pharma** would pay \$8.3 bil to settle charges of illegal marketing and kickbacks to doctors.

Vote counting continued after **Election Day**, Nov. 3, with news organizations, Nov. 7, projecting **Biden** as winner of the presidential election. Republicans filed over 50 lawsuits challenging results or balloting procedures, to little effect. The Biden-Harris ticket won in Electoral College, 306-232, and came out ahead by 7 mil in popular vote. Trump refused to concede, claiming without evidence to have lost due to fraud.

The U.S., Nov. 4, formally withdrew from the 2015 **Paris climate agreement**. Massive **cyberattack** on U.S. government sites and other targets confirmed by U.S., Dec. 13; attributed to Russia. Congress easily passed a second **economic aid and stimulus** bill, signed Dec. 27 by Trump.

FDA approved **COVID-19 vaccines** from Pfizer, Dec. 11, and Moderna, Dec. 18, on emergency basis; first vaccine in the U.S. administered Dec. 14. By year's end, U.S. recorded some **20 mil COVID-19 cases**, with 350,000 deaths, according to Johns Hopkins Univ.'s Coronavirus Resource Center.

2021 On Jan. 6, after Pres. Trump told rally to "fight like hell" against accepting 2020 presidential results, a **mob** of supporters, some armed, broke into the **Capitol**, temporarily preventing Congress from certifying the election outcome. One woman was fatally shot by police, of whom over 100 were injured. By year's end more than 700 people had been charged.

By a 232-197 vote, House voted to **impeach Trump** Jan. 13 for a second time, this time for "incitement of insurrection." On

Feb. 13, 7 Republican senators joined all 50 Democrats in a vote to convict, which fell short of the needed two-thirds majority.

Joe Biden was sworn in as president Jan. 20, at the Capitol. Beginning Jan. 20 he signed a series of **executive orders**, many aimed at revoking or modifying Trump policies relating to immigration or the COVID-19 pandemic. **CDC** issued order Jan. 29 requiring masks on public transportation.

Senate confirmed cabinet nominations of **Janet Yellen** as treasury sec. (Jan. 25), **Antony Blinken** as sec. of state (Jan. 26), and **Merrick Garland** as attorney general (Mar. 10). Biden announced, Feb. 4, that the U.S. would end its support for Saudi-led offensive against Iran-backed Houthi in devastating **Yemen civil war**. On Feb. 11 Biden halted diversion of Pentagon funding for construction of a **border wall**.

NASA's *Perseverance* rover landed on **Mars**, Feb. 18. U.S. officially reentered the **Paris climate accord** Feb. 19. Pres. Biden Mar. 11 signed a \$1.9-tril **COVID relief package** approved by Congress, which included direct payments to nearly all households.

A gunman Mar. 16 killed eight people, including six Asian women, at **Atlanta**-area spas. Another shooter killed 10 people Mar. 22 at supermarket in **Boulder**, CO. Eight workers at a FedEx facility in **Indianapolis**, IN, were shot and killed Apr. 15 by a former employee, who died by suicide.

Georgia became the first of several states to impose controversial **voting restrictions**, under measure signed Mar. 25 by Gov. **Brian Kemp** (R).

After brief struggle during a traffic stop, a police officer, mistakenly firing her handgun instead of her Taser, killed **Daunte Wright**, a young Black man, in a Minneapolis suburb Apr. 11; she was convicted of manslaughter.

A **pipeline** supplying East Coast gasoline temporarily shut down May 7 due to a **cyberattack** attributed to a Russian-based hacking group. GOP House members May 12 voted to remove Rep. **Liz Cheney** (R, WY), a Trump critic, as chair of the House Republican Conference.

Biden administration June 1 suspended oil and gas leases in Alaska's **Arctic National Wildlife Refuge**. Pres. Biden announced plan June 3 to donate **COVID vaccines** to global sharing program and, June 10, to purchase 500 mil vaccines for lower-income countries.

2021: Coronavirus vaccines are widely available by midyear, but virus variants and vaccine reluctance continue to pose challenges

Large portions of a structurally damaged 13-story condominium in **Surfside**, FL, collapsed June 24, killing 98 people. On July 1 the Supreme Court reinstated two **Arizona election laws** declared discriminatory by a lower court. **Boy Scouts** of America July 1 agreed to pay \$850 mil to settle sexual abuse claims.

In Afghanistan, the U.S., July 2, handed over control of its largest military base, **Bagram Airfield**, to Afghan forces; Taliban continued expanding territorial control.

A wildfire ignited July 13 in **California** burned nearly 1 mil acres. On July 20, **Jeff Bezos** launched Blue Origin's reusable and pilotless *New Shepard* rocket, with Bezos and three others aboard. U.S. won 39 gold and 113 total medals at postponed XXXII Summer **Olympic Games**, held July 23-Aug. 8 in Tokyo.

Taliban forces captured 26 provincial capitals and, Aug. 15, retook **Kabul**, while Afghan forces surrendered Bagram Airfield. Under a fixed Aug. 31 deadline, U.S. forces scrambled to evacuate Americans and Afghans who aided them, with many of the latter left behind. An **airport bombing**, Aug. 26, killed 13 U.S.

soldiers and at least 169 Afghan civilians; U.S. retaliated with drone strikes, one of which mistakenly killed a family of 10.

New York Gov. **Andrew Cuomo** (D) resigned, effective Aug. 23, following state probe that reported instances of sexual harassment. **Hurricane Ida** made landfall Aug. 29 in Louisiana, amid heat wave; close to 100 U.S. deaths reported.

A **Texas** law generally prohibiting **abortions** after a detectable fetal heartbeat took effect Sept. 1. Pres. Biden, Sept. 9, announced a COVID **vaccine mandate** for companies with over 100 employees (mandate later struck down by U.S. Supreme Court).

In a Sept. 14 **recall election**, Californians voted 62%-38% to retain **Gavin Newsom** (D) as governor. Four passengers aboard **SpaceX's Dragon** capsule, launched Sept. 15, became the first all-civilian, nonprofessional crew to orbit Earth. A whistleblower testifying Oct. 5 before a Senate subcommittee said **Facebook** leadership had failed to address harms caused by the service. **Supply chain disruptions** persisted, with some 100 **container ships** awaiting processing outside Los Angeles and Long Beach, CA, ports as of Oct.

Federal regulators, Nov. 2, recommended the Pfizer vaccine for children aged 5-11 and, Nov. 19, authorized **booster shots** of Pfizer and Moderna vaccines for all adults. Biden, Nov. 15, signed \$1.5-tril **infrastructure** package.

Six people were run over and killed at **Waukesha**, WI, Christmas parade, Nov. 21; suspect charged. Four students were shot and killed, Nov. 30, at an **Oxford, MI, high school**; besides the alleged shooter his parents were charged, for allowing him access to the weapon. Five people shot dead, Dec. 27, in and around **Denver** and **Lakewood**, CO; shooter was killed by police.

With Russian troops massed near Russia's Ukraine border, Pres. Biden, meeting by video with Pres. Vladimir **Putin**, Dec. 7, threatened heavy sanctions if Russia were to invade.

Tornadoes across the Southeast and lower Midwest, Dec. 10-11, killed at least 90 people. U.S. Dec. 14 recorded a cumulative total of **800,000 COVID-19** deaths. NASA's **Parker Solar Probe**

became the first spacecraft to reach the Sun's upper atmosphere, as reported Dec. 14.

U.S. **unemployment rate** for Dec. was down to 3.9%. **Consumer Price Index** climbed 7% in 2021, biggest 12-month increase in 40 years.

U.S. HISTORY: DOCUMENTS, SPEECHES, AND SYMBOLS

Patrick Henry's Speech to the Virginia Convention

The following is an excerpt from Patrick Henry's speech to the Virginia Convention, which met at St. John's Church in Richmond, on Mar. 23, 1775, to react to British oppression.

Gentlemen may cry, Peace, Peace—but there is no peace. The war is actually begun! The next gale that sweeps from the north will bring to our ears the clash of resounding arms! Our brethren are already in the field! Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me liberty, or give me death!

Adoption of the Declaration of Independence

On June 7, 1776, Richard Henry Lee, who had issued the first call for a congress of the colonies, introduced in the Continental Congress at Philadelphia a resolution declaring “that these United Colonies are, and of right ought to be, free and independent states, that they are absolved from all allegiance to the British Crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved.”

The resolution, seconded by John Adams on behalf of the Massachusetts delegation, came up again June 11 when a committee of five chaired by Thomas Jefferson (VA) was appointed to express the purpose of the resolution in a declaration of independence. The other four were John Adams, Benjamin Franklin (PA), Robert R. Livingston (NY), and Roger Sherman (CT).

Drafting the Declaration was assigned to Jefferson, who worked on a portable desk of his own construction in a room at Market and 7th St. The committee reported the result on June 28, 1776. The members of the Congress suggested a number of changes, which Jefferson called “deplorable.” They did not approve Jefferson’s arraignment of the British people and King George III for encouraging and fostering the slave trade, which Jefferson called “an execrable commerce.” They eliminated 630 words and added 146, leaving 1,322 words in the final draft. In its final form, capitalization was erratic. Jefferson had written that men were endowed with “inalienable” rights; in the final copy it came out as “unalienable.”

The Lee-Adams resolution of independence was adopted by 12 yeas on July 2—the actual date of the act of independence. The Declaration, which explains the act, was adopted July 4.

After the Declaration was adopted, July 4, 1776, it was turned over to printer John Dunlap to be printed on broadsides. The original copy was lost and one of his broadsides was attached to a page in the journal of the Congress. It was read aloud July 8 in Philadelphia; Easton, PA; and Trenton, NJ. On July 9, it was read by order of Gen. George Washington to the troops assembled on the Common in New York City (now City Hall Park).

The Continental Congress of July 19, 1776, adopted the following resolution:

“Resolved, That the Declaration passed on the 4th, be fairly engrossed on parchment with the title and stile of ‘The Unanimous Declaration of the thirteen United States of America’ and that the same, when engrossed, be signed by every member of Congress.” (Engrossing meant clearly writing out an official document.)

Not all delegates who signed the engrossed Declaration had been present on July 4. Among them were Robert Morris (PA), William Williams (CT), and Samuel Chase (MD), who signed on Aug. 2. Oliver Wolcott (CT), George Wythe (VA), Richard Henry Lee (VA), and Elbridge Gerry (MA) signed in Aug. and Sept.; Matthew Thornton (NH) joined the Congress Nov. 4 and signed later. Thomas McKean (DE) rejoined Washington’s army before signing and said later that he signed in 1781.

Charles Carroll of Carrollton was appointed a delegate by Maryland on July 4, 1776, presented his credentials July 18, and signed the engrossed Declaration on Aug. 2. Born Sept. 19, 1737, he was 95 years old and the last surviving signer when he died Nov. 14, 1832.

Two Pennsylvania delegates who did not support the Declaration July 4, 1776, were replaced. The four New York delegates did not have authority from their state to vote on July 4. On July 9, the New York state convention authorized its delegates to approve the Declaration, and the Congress was so notified on July 15, 1776. The four signed the Declaration on Aug. 2.

Declaration of Independence

The Declaration of Independence was adopted by the Continental Congress in Philadelphia on July 4, 1776. John Hancock was president of the Congress, and Charles Thomson was secretary. A copy of the Declaration, engrossed (i.e., written in a clear hand) on parchment, was signed by members of Congress on and after Aug. 2, 1776. On Jan. 18, 1777, Congress ordered that "an authenticated copy, with the names of the members of Congress subscribing the same, be sent to each of the United States, and that they be desired to have the same put on record." Authenticated copies were printed in broadside form in Baltimore, where the Continental Congress was then in session. The following text is that of the original printed by John Dunlap in Philadelphia for the Continental Congress. The original is on display at the National Archives in Washington, DC.

In CONGRESS, July 4, 1776.

**A DECLARATION By the REPRESENTATIVES of the
UNITED STATES OF AMERICA, In GENERAL
CONGRESS assembled.**

When in the Course of human Events, it becomes necessary for one People to dissolve the Political Bands which have connected them with another, and to assume among the Powers of the Earth, the separate and equal Station to which the Laws of Nature and of

Nature's God entitle them, a decent Respect to the Opinions of Mankind requires that they should declare the causes which impel them to the Separation.

We hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the Pursuit of Happiness—That to secure these Rights, Governments are instituted among Men, deriving their just Powers from the Consent of the Governed, that whenever any Form of Government becomes destructive of these Ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its Foundation on such Principles, and organizing its Powers in such Form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient Causes; and accordingly all Experience hath shewn, that Mankind are more disposed to suffer, while Evils are sufferable, than to right themselves by abolishing the Forms to which they are accustomed. But when a long Train of Abuses and Usurpations, pursuing invariably the same Object, evinces a Design to reduce them under absolute Despotism, it is their Right, it is their Duty, to throw off such Government, and to provide new Guards for their future Security. Such has been the patient Sufferance of these Colonies; and such is now the Necessity which constrains them to alter their former Systems of Government. The History of the present King of Great-Britain is a History of repeated Injuries and Usurpations, all having in direct Object the Establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid World.

He has refused his Assent to Laws, the most wholesome and necessary for the public Good.

He has forbidden his Governors to pass Laws of immediate and pressing Importance, unless suspended in their Operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the Accommodation of large Districts of People, unless those People would relinquish the

Right of Representation in the Legislature, a Right inestimable to them, and formidable to Tyrants only.

He has called together Legislative Bodies at Places unusual, uncomfortable, and distant from the Depository of their Public Records, for the sole Purpose of fatiguing them into Compliance with his Measures.

He has dissolved Representative Houses repeatedly, for opposing with manly Firmness his Invasions on the Rights of the People.

He has refused for a long Time, after such Dissolutions, to cause others to be elected; whereby the Legislative Powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the Dangers of Invasion from without, and Convulsions within.

He has endeavoured to prevent the Population of these States; for that Purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their Migrations hither, and raising the Conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers.

He has made Judges dependent on his Will alone, for the Tenure of their Offices, and the Amount and Payment of their Salaries.

He has erected a Multitude of new Offices, and sent hither Swarms of Officers to harrass our People, and eat out their Substance.

He has kept among us, in Times of Peace, Standing Armies, without the consent of our Legislatures.

He has affected to render the Military independent of and superior to the Civil Power.

He has combined with others to subject us to a Jurisdiction foreign to our Constitution, and unacknowledged by our Laws; giving his Assent to their Acts of pretended Legislation:

For quartering large Bodies of Armed Troops among us:

For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all Parts of the World:
For imposing Taxes on us without our Consent:
For depriving us, in many Cases, of the Benefits of Trial by Jury:
For transporting us beyond Seas to be tried for pretended Offences:

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an arbitrary Government, and enlarging its Boundaries, so as to render it at once an Example and fit Instrument for introducing the same absolute Rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all Cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our Seas, ravaged our Coasts, burnt our Towns, and destroyed the Lives of our People.

He is, at this Time, transporting large Armies of foreign Mercenaries to compleat the Works of Death, Desolation, and Tyranny, already begun with circumstances of Cruelty and Perfidy, scarcely paralleled in the most barbarous Ages, and totally unworthy the Head of a civilized Nation.

IN CONGRESS, JULY 4, 1776.

The unanimous Declaration of the thirteen united States of America.

[illegible]

(Faint handwritten notes and signatures)

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the Executioners of their Friends and Brethren, or to fall themselves by their Hands.

He has excited domestic Insurrections amongst us, and has endeavoured to bring on the Inhabitants of our Frontiers, the merciless Indian Savages, whose known Rule of Warfare, is an undistinguished Destruction, of all Ages, Sexes and Conditions.

In every stage of these Oppressions we have Petitioned for Redress in the most humble Terms: Our repeated Petitions have been answered only by repeated Injury. A Prince, whose Character is thus marked by every act which may define a Tyrant, is unfit to be the Ruler of a free People.

Nor have we been wanting in Attentions to our British Brethren. We have warned them from Time to Time of Attempts by their Legislature to extend an unwarrantable Jurisdiction over us. We have reminded them of the Circumstances of our Emigration and Settlement here. We have appealed to their native Justice and Magnanimity, and we have conjured them by the Ties of our common Kindred to disavow these Usurpations, which, would inevitably interrupt our Connections and Correspondence. They too have been deaf to the Voice of Justice and of Consanguinity. We must, therefore, acquiesce in the Necessity, which denounces our Separation, and hold them, as we hold the rest of Mankind, Enemies in War, in Peace, Friends.

We, therefore, the Representatives of the UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the World for the Rectitude of our Intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly Publish and Declare, That these United Colonies are, and of Right ought to be, Free and Independent States; that they are absolved from all Allegiance to the British Crown, and that all political Connection between them and the State of Great-Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm Reliance on the Protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

JOHN HANCOCK, President.

Attest.

CHARLES THOMSON, Secretary.

Signers of the Declaration of Independence

Delegate (state)	Occupation	Birthplace	Born	Died
Adams, John (MA)	Lawyer	Braintree (Quincy), MA	Oct. 30, 1735	July 4, 1826

Wythe, George (VA)	Lawyer	Elizabeth City County, VA	c. 1726	June 8, 1806

Origin of the Constitution

The War of Independence was conducted by delegates from the original 13 states, who composed the Congress of the United States of America, known as the Continental Congress. In 1777 the

Congress submitted to the legislatures of the states the Articles of Confederation and Perpetual Union, which were ratified by New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, Georgia, and finally, in 1781, Maryland.

The first article read: "The stile of this confederacy shall be the United States of America." This did not signify a sovereign nation, because the states delegated only those powers they could not handle individually, such as to wage war, make treaties, and contract debts for general expenses (e.g., paying the army). Taxes for payment of such debts were levied by the individual states. The president signed himself "President of the United States in Congress assembled," but here the United States were considered in the plural, a cooperating group.

When the war was over, it became evident that a stronger federal union was needed. The Congress left the initiative to the legislatures. Virginia in Jan. 1786 appointed commissioners to meet with representatives of other states; delegates from Virginia, Delaware, New York, New Jersey, and Pennsylvania met at Annapolis. Alexander Hamilton prepared their call asking delegates from all states to meet in Philadelphia in May 1787 "to render the Constitution of the federal government adequate to the exigencies of the union." Congress endorsed the plan on Feb. 21, 1787. Delegates were appointed by all states except Rhode Island.

The convention was called for May 14, 1787, but a quorum was not present until May 25. George Washington was chosen president (presiding officer). The states certified 65 delegates, but 10 did not attend. The work was done by 55, not all of whom were present at all sessions. Of the 55 attending delegates, 39 signed Sept. 17, 1787, some with reservations, and 16 failed to sign. Some historians have said 74 delegates (nine more than the 65 actually certified) were named, and 19 failed to attend. These additional persons refused the appointment, were never delegates, and were never counted as absentees. Washington sent the Constitution to Congress, and that body, Sept. 28, 1787, ordered it sent to the legislatures, "in order to be submitted to a convention of delegates chosen in each state by the people thereof."

The Constitution was ratified by the votes of each state's convention as follows: Delaware, Dec. 7, 1787, unanimous; Pennsylvania, Dec. 12, 1787, 46 to 23; New Jersey, Dec. 18, 1787, unanimous; Georgia, Jan. 2, 1788, unanimous; Connecticut, Jan. 9, 1788, 128 to 40; Massachusetts, Feb. 6, 1788, 187 to 168; Maryland, Apr. 28, 1788, 63 to 11; South Carolina, May 23, 1788, 149 to 73; New Hampshire, June 21, 1788, 57 to 46; Virginia, June 25, 1788, 89 to 79; New York, July 26, 1788, 30 to 27. Nine states were needed to establish the operation of the Constitution "between the states so ratifying the same," and New Hampshire was the ninth state. The government did not declare the Constitution in effect until the first Wednesday in Mar. 1789, which was Mar. 4. After that, North Carolina ratified it on Nov. 21, 1789, 194 to 77; and Rhode Island, May 29, 1790, 34 to 32. Vermont in convention ratified it on Jan. 10, 1791, and by act of Congress approved on Feb. 18, 1791, was admitted into the Union as the 14th state, Mar. 4, 1791.

Constitution of the United States

The text of the Constitution given here is from the centennial edition of *The Constitution of the United States of America: Analysis and Interpretation*, prepared by the Library of Congress and issued by the U.S. Government Printing Office. Aug. 26, 2017. Text in brackets indicates that an item has been superseded or amended, or provides background information. **Boldface text preceding** an article, section, or amendment is a brief summary, added by *The World Almanac*.

The Original Seven Articles

PREAMBLE

We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I.

Section 1—Legislative powers, in whom vested.

All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2—House of Representatives, how and by whom chosen. Qualifications of a Representative. Representatives and direct taxes, how apportioned and enumerated. Vacancies to be filled. Choosing of officers and power of impeachment.

The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

[Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.] *[The part of the previous sentence regarding apportionment of representatives among the states was changed by Amendment XIV, section 2, and apportionment of taxes by Amendment XVI.]* The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section 3—Senators, how and by whom chosen. How assembled. Qualifications of a Senator. President of the Senate. President pro tempore and other officers of the Senate, how chosen. Power to try impeachments. Judgment in cases of impeachment.

The Senate of the United States shall be composed of two Senators from each State, [chosen by the Legislature] *[The preceding words were superseded by Amendment XVII.]* thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third may be chosen every second Year; [and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.] *[The words in brackets were superseded by Amendment XVII.]*

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section 4—Times, places, manner of elections. Time of assembly.

The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be [on the first Monday in December], *[The words in brackets were superseded by Amendment XX, section 2.]* unless they shall by Law appoint a different Day.

Section 5—Membership, quorums, adjournments. Rules of proceedings. Journal of proceedings. Time of adjournments.

Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section 6—Compensation, privileges. Incompatible offices.

The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been encreased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section 7—House to originate revenue bills. Legislative process; bill presented to the President before becoming law. Passing of bill over objections of President, veto.

All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by Yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall

have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section 8—Powers of Congress.

The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and post Roads;

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

To provide and maintain a Navy;

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

To provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress;

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9—Powers denied to Congress: Importation of slaves. Habeas corpus. Bills of attainder. Taxes, how apportioned. Export duty. Preference to ports. Money, how drawn from Treasury. Titles of nobility.

The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to

be taken.

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10—States prohibited from the exercise of certain powers.

No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing it's inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

ARTICLE II.

Section 1—President, powers and term of office. Electors, number and how appointed. Electors to vote for President. Qualifications of President. On whom duties devolve in case of removal, death, etc., of President. President's compensation. Oath of office.

The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

[The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the

greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.] *[This clause was superseded by Amendment XII.]*

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States. *[For qualification of the Vice President, see Amendment XII.]*

[In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.] *[This clause was superseded by Amendment XXV.]*

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be encreased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—

“I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States.”

Section 2—President to be Commander in Chief. Power to make treaties; nominations for, appointments to certain offices. Power to fill vacancies during Senate recess.

The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to Grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3—President shall communicate to, may convene and adjourn Congress; shall receive ambassadors, execute laws, and commission officers.

He shall from time to time give to the Congress Information on the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4—All civil offices forfeited for certain crimes.

The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and

Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE III.

Section 1—Judicial powers, tenure, compensation.

The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office.

Section 2—Judicial power, cases to which it extends.

Jurisdiction of Supreme Court. Trial by jury; where held.

The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—[between a State and Citizens of another State;]—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, [and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.] *[This section was modified by Amendment XI.]*

In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3—Treason defined. Punishment of.

Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

ARTICLE IV.

Section 1—Each State to give credit to the public acts, etc., of every other State.

Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section 2—Privileges of citizens of each State. Fugitives from justice to be delivered up. Fugitives from service or labor, to be delivered up.

The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

[No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.] *[This clause was superseded by Amendment XIII.]*

Section 3—Admission of new States. Power of Congress over territory and other property.

New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4—Republican form of government guaranteed; each State to be protected.

The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE V.

Constitution, how amended; proviso.

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE VI.

**Certain debts and engagements shall be valid.
Constitution, laws and treaties made, shall be supreme law**

of the United States. Oath to support Constitution, by whom taken; no religious test shall be required.

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE VII.

Ratification to establish the Constitution.

The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independance of the United States of America the Twelfth. In witness whereof We have hereunto subscribed our Names,

G^o. Washington, Presid^t. and deputy from Virginia

New Hampshire—John Langdon, Nicholas Gilman

Massachusetts—Nathaniel Gorham, Rufus King

Connecticut—W^m. Sam^l. Johnson, Roger Sherman

New York—Alexander Hamilton

New Jersey—Wil: Livingston, David Brearley, W^m. Paterson, Jona: Dayton

Pennsylvania—B Franklin, Thomas Mifflin, Rob^t. Morris, Geo. Clymer, Tho^s. FitzSimons, Jared Ingersoll, James Wilson, Gouv

Morris

Delaware—Geo: Read, Gunning Bedford jun, John Dickinson,
Richard Bassett, Jacob: Broom

Maryland—James McHenry, Dan of St Tho^s. Jenifer, Dan^l Carroll

Virginia—John Blair, James Madison Jr.

North Carolina—W^m. Blount, Rich^d. Dobbs Spaight, Hu
Williamson

South Carolina—J. Rutledge, Charles Cotesworth Pinckney,
Charles Pinckney, Pierce Butler

Georgia—William Few, Abr Baldwin

[George Washington was first to sign the Constitution on Sept. 17, 1787, followed by state delegates in order of geography, from north to south. In total, 38 delegates signed the Constitution, although Delaware delegate George Reed signed for absent delegate John Dickinson, bringing the total signatures to 39. Three delegates abstained from signing in protest of the absent Bill of Rights.]

Origin of the Bill of Rights

Congress, at its first session in New York, NY, submitted to the states 12 amendments Sept. 25, 1789, to clarify certain individual and state rights not named in the Constitution. They are generally called the Bill of Rights.

Influential in framing these amendments was the Declaration of Rights of Virginia, written by George Mason (1725-92) in 1776. Mason, a Virginia delegate to the Constitutional Convention, did not sign the Constitution and opposed its ratification on the ground that it did not sufficiently oppose slavery or safeguard individual rights.

In the preamble to the resolution offering the proposed amendments, Congress said: "The Conventions of a number of the States, having at the time of their adopting the Constitution, expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added: And as extending the ground of public confidence in the Government, will best insure the beneficent ends of its institution."

Ten of these amendments, originally three to 12 inclusive, were ratified by the states as follows: New Jersey, Nov. 20, 1789; Maryland, Dec. 19, 1789; North Carolina, Dec. 22, 1789; South Carolina, Jan. 19, 1790; New Hampshire, Jan. 25, 1790; Delaware, Jan. 28, 1790; New York, Feb. 27, 1790; Pennsylvania, Mar. 10, 1790; Rhode Island, June 7, 1790; Vermont, Nov. 3, 1791; Virginia, Dec. 15, 1791; Massachusetts, Mar. 2, 1939; Georgia, Mar. 18, 1939; Connecticut, Apr. 19, 1939. These original 10 ratified amendments follow as Amendments I to X inclusive.

Of the two original proposed amendments that were not ratified promptly by the necessary number of states, the first related to apportionment of Representatives; the second, relating to compensation of members of Congress, was ratified in 1992 and became Amendment XXVII.

The Bill of Rights

In force Dec. 15, 1791

AMENDMENT I.

Religious establishment prohibited. Freedom of speech and of press; right to assemble and to petition.

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

AMENDMENT II.

Right to keep and bear arms.

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms shall not be infringed.

AMENDMENT III.

Conditions for quartering of soldiers.

No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

AMENDMENT IV.

Protection from unreasonable search and seizure.

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

AMENDMENT V.

Provisions concerning prosecution and due process of law.

Compensation of private property taken for public use.

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

AMENDMENT VI.

Rights of accused in criminal prosecutions.

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defense.

AMENDMENT VII.

Right of trial by jury in civil cases.

In Suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise reexamined in any Court of the United States, than according to the rules of the common law.

AMENDMENT VIII.

Excessive bail or fines; cruel and unusual punishment.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

AMENDMENT IX.

Unenumerated rights.

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

AMENDMENT X.

Rights reserved to States.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Amendments Since the Bill of Rights

AMENDMENT XI.

Judicial powers construed.

[Proposed by Congress Mar. 4, 1794. Ratification complete Feb. 7, 1795, though official announcement of ratification not made until Jan. 8, 1798.]

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

AMENDMENT XII.

Election of President and Vice-President.

[Proposed by Congress Dec. 9, 1803; ratified June 15, 1804.]

The Electors shall meet in their respective states and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the

presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. [And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.] *[The words in brackets were superseded by Amendment XX, section 3.]* The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

THE RECONSTRUCTION AMENDMENTS

[Amendments XIII, XIV, and XV are commonly known as the Reconstruction Amendments inasmuch as they followed the Civil War and were drafted by Republicans who wanted to impose their own policy of reconstruction on the South. Southern postbellum legislatures in states including Mississippi, South Carolina, and Georgia had set up laws that effectively perpetuated slavery under other names.]

AMENDMENT XIII. Slavery abolished.

[Proposed by Congress Jan. 31, 1865; ratified Dec. 6, 1865.]

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XIV.

Citizenship rights not to be abridged.

[Proposed by Congress June 13, 1866, ratified July 9, 1868, and declared to have been ratified in a proclamation by the Secretary of State, July 28, 1868.]

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being [twenty-one] *[The words in brackets were changed by Amendment XXVI.]* years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State,

who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

AMENDMENT XV.

Race no bar to voting rights.

[Proposed by Congress Feb. 26, 1869; ratified Feb. 3, 1870.]

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XVI.

Taxes on income.

[Proposed by Congress July 12, 1909; ratified Feb. 3, 1913.]

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

AMENDMENT XVII.

Popular election of Senators.

[Proposed by Congress May 13, 1912; ratified Apr. 8, 1913.]

The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, That the legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

AMENDMENT XVIII.

Liquor prohibition amendment.

[Proposed by Congress Dec. 18, 1917; ratified Jan. 16, 1919. Repealed by Amendment XXI, effective Dec. 5, 1933.]

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

AMENDMENT XIX.

Nationwide suffrage to women.

[Proposed by Congress June 4, 1919; ratified Aug. 18, 1920.]

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XX.

Commencement of terms of office.

[Proposed by Congress Mar. 2, 1932; ratified Jan. 23, 1933.]

Section 1. The terms of the President and Vice President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures

of three-fourths of the several States within seven years from the date of its submission.

AMENDMENT XXI.

Repeal of Amendment XVIII.

[Proposed by Congress Feb. 20, 1933; ratified Dec. 5, 1933.]

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

AMENDMENT XXII.

Limit on presidential terms of office.

[Proposed by Congress Mar. 24, 1947; ratified Feb. 27, 1951.]

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of the President more than once. But this Article shall not apply to any person holding the office of President when this Article was proposed by Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This Article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress.

AMENDMENT XXIII.

Presidential vote for District of Columbia.

[Proposed by Congress June 16, 1960; ratified Mar. 29, 1961.]

Section 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXIV.

Poll tax barred in federal elections.

[Proposed by Congress Sept. 14, 1962; ratified Jan. 23, 1964.]

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXV.

Presidential vacancy, inability, and succession.

[Proposed by Congress July 6, 1965; ratified Feb. 10, 1967.]

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2. Whenever there is a vacancy in the office of the Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both Houses of Congress.

Section 3. Whenever the President transmits to the President pro tempore of the Senate and the Speaker of the House of

Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President as Acting President.

Section 4. Whenever the Vice President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as Acting President.

Thereafter, when the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive department or of such other body as Congress may by law provide, transmit within four days to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both Houses that the President is unable to discharge the powers and duties of his office, the Vice President shall continue to discharge the same as Acting President; otherwise, the President shall resume the powers and duties of his office.

AMENDMENT XXVI.

Voting age lowered to 18 years.

[Proposed by Congress Mar. 23, 1971; ratified July 1, 1971.]

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any State on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXVII.

Congressional pay.

[Proposed by Congress Sept. 25, 1789; ratified May 7, 1992.]

No law, varying the compensation for the services of the Senators and Representatives, shall take effect, until an election of Representatives shall have intervened.

How a Bill Becomes a Law

A senator or representative introduces a bill in Congress by sending it to the clerk of the Senate or the House, who assigns it a number and title. This procedure is termed the first reading. The clerk then refers the bill to the appropriate committee of the Senate or House.

If the committee does not wish to consider the bill, it will table it. Otherwise, the committee holds hearings to gather information, such as by inviting experts and other members of the public to testify. The committee then debates the bill and may offer amendments. A vote is taken, and if favorable, the bill is sent back to the clerk of the Senate or House.

The clerk reads the bill to the house—the second reading. Members may then debate the bill and suggest amendments.

After debate and any amendments, the bill is given a third reading, simply of the title, and put to a voice or roll-call vote.

It should be noted that the Senate has additional rules that can further complicate the process of making laws. Most significantly, the Senate tradition of unlimited debate has allowed for the use of the filibuster, a tactic to prolong debate and thus delay or prevent a vote on measures, even as they may actually have majority support. In an early effort to limit the use of filibusters, the Senate in 1917 provided for “cloture,” or a vote to end debate. Originally cloture required a two-thirds supermajority to succeed; in 1975 the Senate reduced the required supermajority to three-fifths of all senators duly chosen and sworn. If the bill passes, it goes to the other house, where it may be

defeated or passed, with or without amendments. If defeated, the bill dies. If passed with amendments, a conference committee made up of members of both houses works out the differences between the two bills and arrives at a compromise.

After passage of the final version by both houses, the bill is sent to the president. If the president signs it, the bill becomes a law. The president may instead veto the bill by refusing to sign it and sending it back to the house where it originated, with reasons for the veto.

The president's objections are then read and debated, and a roll-call vote is taken. If the bill receives less than a two-thirds majority, it is defeated. If it receives at least two-thirds, it is sent to the other house. If that house also passes it by at least a two-thirds majority, the president's veto is overridden, and the bill becomes a law.

If the president neither signs nor vetoes the bill within 10 days—not including Sundays—it automatically becomes a law even without the president's signature. However, if Congress adjourns within those 10 days, the bill is automatically killed; this indirect rejection is termed a pocket veto.

Under the Line Item Veto Act, effective Jan. 1, 1997, the president was authorized, under certain circumstances, to veto a bill in part. The legislation was found unconstitutional by the Supreme Court, June 25, 1998.

Presidential Oath of Office

The Constitution (Article II, Section 1) directs that the president-elect shall take the following oath to be inaugurated: "I do solemnly swear [affirm] that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

Custom decrees the addition of the words "So help me God" at the end of the oath when taken by the president-elect, with the left hand on the Bible for the duration of the oath, and the right hand slightly raised. However, the use of a Bible, or any other religious book, is not required.

Presidential Succession

If, by reason of death, resignation, removal from office, inability, or failure to qualify, there is neither a president nor vice president to discharge the powers and duties of the office of president, then the speaker of the House of Representatives shall, upon his resignation as speaker and as representative, act as president. The same rule shall apply in the case of the death, resignation, removal from office, or inability of an individual acting as president.

If, at the time when a speaker is to begin the discharge of the powers and duties of the office of president, there is no speaker, or the speaker fails to qualify as acting president, then the president pro tempore of the Senate, upon his resignation as president pro tempore and as senator, shall act as president.

An individual acting as president shall continue to act until the expiration of the then current presidential term, except that (1) if his discharge of the powers and duties of the office is founded in whole or in part in the failure of both the president-elect and the vice president-elect to qualify, then he shall act only until a president or vice president qualifies, and (2) if his discharge of the powers and duties of the office is founded in whole or in part on the inability of the president or vice president, then he shall act only until the removal of the disability of one of such individuals.

If, by reason of death, resignation, removal from office, or failure to qualify, there is no president pro tempore to act as president, then the officer of the United States who is highest on the following list, and who is not under any disability to discharge the powers and duties of president shall act as president: the secretaries of state, treasury, and defense; the attorney general; the secretaries of interior, agriculture, commerce, labor, health and human services, housing and urban development, transportation, energy, education, veterans affairs, and homeland security.

Legislation approved July 18, 1947; amended Sept. 9, 1965, Oct. 15, 1966, Aug. 4, 1977, Sept. 27, 1979, and Mar. 9, 2006. See also Constitutional Amendment XXV.

Confederate States: Secession and Government

The American Civil War (1861-65) grew out of sectional disputes over the continued existence of slavery in the South. Southern legislators contended that the states retained the right to enslave Black people and the right to secede.

The war was not fought by state against state but by one federal regime against another. A Confederate government in Richmond, VA, assumed control over the economic, political, and military life of the seceding states, under protest from Georgia and South Carolina.

South Carolina voted unanimously in convention to secede from the Union, repealing its 1788 ratification of the U.S. Constitution on Dec. 20, 1860, to take effect on Dec. 24. Other states seceded in 1861. Their votes in conventions were Mississippi, Jan. 9, 84-15; Florida, Jan. 10, 62-7; Alabama, Jan. 11, 61-39; Georgia, Jan. 19, 208-89; Louisiana, Jan. 26, 113-17; Texas, Feb. 1, 166-7, ratified by popular vote (34,794 to 11,325) Feb. 23; Virginia, Apr. 17, 88-55, ratified by popular vote (128,884 to 32,134) May 23; Arkansas, May 6, 69-1; Tennessee, May 7, ratified by popular vote (104,019 to 47,238) June 8; and North Carolina, unanimous, May 20.

Missouri Unionists stopped secession in conventions Feb. 28 and Mar. 9, 1861. Under the protection of Confederate troops, secessionist members of the legislature adopted a resolution of secession at Neosho, Oct. 31. The Confederate Congress seated the secessionists' representatives.

Kentucky did not secede, and its government remained Unionist. In a part of the state occupied by Confederate troops, Kentuckians approved secession, and the Confederate Congress admitted their representatives.

The Maryland legislature voted against secession Apr. 27, 1861, 53-13. Delaware did not secede. Pro-Union residents of western Virginia held conventions at Wheeling and, on June 17, 1861, formed the Restored Government of Virginia. It was admitted to the Union as West Virginia on June 20, 1863. Its constitution provided for gradual abolition of slavery.

Forty-two delegates from South Carolina, Georgia, Alabama, Mississippi, Louisiana, and Florida met in convention in Montgomery, AL, on Feb. 4, 1861. They adopted a provisional constitution of the Confederate States of America and elected Jefferson Davis (MS) as provisional president and Alexander H. Stephens (GA) as provisional vice president.

A permanent constitution was adopted Mar. 11. It banned the African slave trade but did not bar interstate commerce in slaves. On July 20 the Congress moved to Richmond. Davis was elected president in Nov. 1861 and was inaugurated Feb. 22, 1862.

The Confederate Congress adopted a flag ("The Stars and Bars") consisting of one white stripe and two red stripes and a blue canton with a circle of white stars. The Confederate battle flag, carried by the Army of Northern Virginia, was more popularly known. It has blue diagonal crossbars with 13 white stars, for the 11 states in the Confederacy plus Kentucky and Missouri, against a red field.

The Gettysburg Address

Delivered by Pres. Abraham Lincoln at the dedication of the Soldiers' National Cemetery in Gettysburg, PA, on Nov. 19, 1863. Five handwritten copies of the Gettysburg Address as made by Lincoln are known to exist. The text differs slightly between copies. The Bliss copy, made for Alexander Bliss, is shown here. The copy is kept on display in the White House.

Four score and seven years ago our fathers brought forth on this continent, a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field, as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But, in a larger sense, we can not dedicate—we can not consecrate—we can not hallow—this ground. The brave men, living

and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here.

It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.

Origin of the United States National Motto

In God We Trust, designated as the U.S. National Motto by Congress in 1956, originated during the Civil War as an inscription for U.S. coins. On Nov. 13, 1861, the Rev. M. R. Watkinson, of Ridleyville, PA, wrote to Treasury Sec. Salmon P. Chase requesting “recognition of the Almighty God in some form on our coins.” Chase ordered designs prepared with the inscription *In God We Trust* and backed coinage legislation that authorized use of this slogan. The motto first appeared on some U.S. coins in 1864 and sporadically thereafter until 1938, after which all U.S. coins bear the inscription. A joint resolution passed by the 84th Congress and signed by Pres. Dwight D. Eisenhower July 30, 1956, declared *In God We Trust* the national motto of the United States.

Great Seal of the U.S.

On July 4, 1776, the Continental Congress appointed a committee consisting of Benjamin Franklin, John Adams, and Thomas Jefferson “to bring in a device for a seal of the United States of America.” The designs submitted by this and a subsequent committee were considered unacceptable. After many delays, a third committee, appointed early in 1782, presented a design prepared by lawyer William Barton. Charles Thomson, the secretary of Congress, suggested certain changes, and Congress finally approved the design on June 20, 1782. The obverse of the seal shows a bald eagle. In the eagle’s mouth is a ribbon bearing the motto *E Pluribus Unum* (out of many, one). In the eagle’s talons are 13 arrows of war and an olive branch of peace. The reverse shows an unfinished pyramid with an eye (Eye of Providence) above it.

The Flag of the U.S.—The Stars and Stripes

The 50-star flag of the United States was raised for the first time officially at 12:01 AM on July 4, 1960, at Ft. McHenry National Monument in Baltimore, MD. The 50th star had been added for Hawaii; just a year earlier, the 49th star was added for Alaska.

There are so many myths and legends surrounding the history of the Stars and Stripes that the facts are difficult, and in some cases impossible, to establish. For example, it is not certain who designed the Stars and Stripes, who made the first such flag, or even whether it ever flew during any battle of the American Revolution.

Historians agree, however, that the Stars and Stripes originated as the result of a resolution offered by the Marine Committee of the Second Continental Congress at Philadelphia and adopted on June 14, 1777. It read:

“Resolved: that the flag of the United States be thirteen stripes, alternate red and white; that the union be thirteen stars, white in a blue field, representing a new constellation.”

Congress gave no hint as to the designer of the flag, no instructions as to the arrangement of the stars, and no information on its appropriate uses.

The resolution establishing the flag was not published until Sept. 2, 1777. Despite repeated requests, George Washington did not get the flags until 1783, after the war was over. And there is no certainty that they were the Stars and Stripes.

Early Flags

Many historians consider the first flag of the U.S. to have been the Grand Union (sometimes called Great Union) flag, although the Continental Congress never officially adopted it. This flag was a modification of the British Meteor flag, which had the red cross of St. George and the white cross of St. Andrew combined in the blue canton. For the Grand Union flag, six horizontal stripes were imposed on the red field, dividing it into 13 alternating red and white stripes. On Jan. 1, 1776, when the Continental Army came into formal existence, this flag was unfurled on Prospect Hill, Somerville, MA. Washington wrote that "we hoisted the Union Flag in compliment to the United Colonies."

One of several flags about which controversy has raged is in Easton, PA. Containing the devices of the national flag in reversed order, this flag has been in the public library in Easton for more than 150 years. Some contend that this flag was actually the first Stars and Stripes, first displayed on July 8, 1776. This flag has 13 red and white stripes in the canton and 13 white stars centered in a blue field.

A flag was hastily improvised from garments by the defenders of Ft. Schuyler at Rome, NY, Aug. 3-22, 1777. Historians believe it was the Grand Union Flag.

The Sons of Liberty had a flag of nine red and white stripes, to signify nine colonies, when they met in New York in 1765 to oppose the Stamp Tax. By 1775, the flag had grown to 13 red and white stripes, with a rattlesnake on it.

At Concord, MA, Apr. 19, 1775, the minutemen from Bedford, MA, are said to have carried a flag having a silver arm with sword on a red field. At Cambridge, MA, the Sons of Liberty used a plain red flag with a green pine tree on it.

In June 1775, Washington went from Philadelphia to Boston to take command of the army. He was escorted to New York by the Philadelphia Light Horse Troop, which carried a yellow flag that had an elaborate coat of arms—the shield charged with 13 knots, the motto “For These We Strive”—and a canton of 13 blue and silver stripes.

In Feb. 1776, Col. Christopher Gadsden, a member of the Continental Congress, gave the South Carolina Provincial Congress a flag “such as is to be used by the commander-in-chief of the American Navy.” It had a yellow field, with a rattlesnake about to strike and the words “Don’t Tread on Me.”

At the Battle of Bennington, Aug. 16, 1777, patriots used a flag of seven white and six red stripes with a blue canton extending down nine stripes. Eleven white stars arch over the figure 76 in the canton; a star appears in each of the canton’s upper corners. The stars are seven-pointed. This flag is preserved in a museum in Bennington, VT.

At the Battle of Cowpens, Jan. 17, 1781, the 3rd Maryland Regiment is said to have carried a flag of 13 red and white stripes, with a blue canton containing 12 stars in a circle around one star.

Who Designed the Flag? No one knows for certain. Francis Hopkinson, designer of a naval flag, declared he had designed the flag and in 1781 asked Congress to reimburse him for his services. Congress did not do so.

Who Called the Flag “Old Glory”? The flag is said to have been named Old Glory by William Driver, a sea captain of Salem, MA. One legend has it that he did so when he raised the flag on his brig in 1824. But his daughter said he named it at his 21st birthday celebration on Mar. 17, 1824, when his mother presented the homemade flag to him.

The Betsy Ross Legend. The widely publicized legend that Betsy Ross made the first Stars and Stripes in June 1776, at the request of a committee composed of George Washington, Robert Morris, and George Ross, an uncle, was first made public in 1870, by a grandson of Ross. Historians have been unable to find a historical record of such a meeting or committee.

Adding New Stars

On the admission of Vermont and Kentucky to the Union, Congress designated that after May 1, 1795, the flag should have 15 stripes, alternating red and white, and 15 white stars on a blue field.

When more new states were admitted, it became evident that the flag would become burdened with stripes. Congress ordered that after July 4, 1818, the flag should have 13 stripes, symbolizing 13 original states; that the union have 20 stars; and that whenever a new state was admitted a new star should be added on the July 4 following admission.

No law designates the permanent arrangement of the stars. However, since 1912, when a new state has been admitted, the new design has been announced by executive order. No star is specifically identified with any state.

Pledge of Allegiance to the Flag

I pledge allegiance to the flag of the United States of America, and to the republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

This, the current official version of the Pledge of Allegiance, developed from a pledge first published in the Sept. 8, 1892, issue of *Youth's Companion*, a weekly magazine. The original pledge contained the phrase "my flag," which was changed more than 30 years later to "flag of the United States of America." A 1954 act of Congress added the words "under God." (In 2002, the 9th Circuit U.S. Court of Appeals ruled that recitation of the pledge in public schools could not include that phrase. In 2004, however, the U.S. Supreme Court voted to decline to decide the case on a technicality. The lower court's decision was thus overturned.)

The authorship of the pledge was in dispute for many years. *Youth's Companion* stated in 1917 that the original draft was written by James B. Upham, an executive of the magazine who died in 1910. A leaflet circulated by the magazine later named Upham as the originator of the first draft.

Francis Bellamy, a former member of the *Youth's Companion* editorial staff, publicly claimed authorship of the pledge in 1923. In 1939, the United States Flag Association, acting on the advice of a committee named to study the controversy, upheld the claim by Bellamy, who had died eight years earlier. In 1957 the Library of Congress issued a report attributing the authorship to Bellamy.

According to the federal Flag Code, the pledge should be given while standing at attention facing the flag with the right hand over the heart. Those not in military uniform should remove any non-religious head coverings with their right hand and hold it at the left shoulder, the hand being over the heart. Those in uniform should remain silent, face the flag, and render a military salute. Members and veterans of the Armed Forces not in uniform may also render the military salute in the manner provided for persons in uniform.

History of the U.S. National Anthem

"The Star-Spangled Banner" was formally designated the national anthem by Act of Congress, Mar. 3, 1931. The words were written by Francis Scott Key, of Georgetown, in DC, marking the bombardment of Ft. McHenry in Baltimore, MD, Sept. 13-14, 1814. Key was a lawyer, a graduate of St. John's College in Annapolis, MD, and a volunteer in a light artillery company. When a friend, Dr. William Beanes, a Maryland physician, was arrested by the British for interfering with British deserters and straggling ground troops, Key and U.S. Col. John Skinner, with permission from Pres. Madison, went to the fleet under a flag of truce to ask for Beanes's release. The British consented, but as the fleet was about to sail up the Patapsco River to bombard Ft. McHenry, Key was detained for the duration of the battle.

The bombardment of Ft. McHenry began at 7 AM, Sept. 13, and lasted 25 hours. The British fired more than 1,500 shells. They were unable to approach closely because the U.S. had sunk 22 vessels to form a barrier. Only four Americans were killed and 24 wounded. A British bomb ship was disabled.

The morning after the shelling, Sept. 14, inspired by the flag still flying above the garrison, Key began to draft the poem. Released from British custody in Baltimore Sept. 16, Key revised the poem and gave it to his brother-in-law, Joseph Nicholson, who encouraged its printing on handbills. The first versions were titled "The Defence of Fort McHenry" and included a note suggesting use of the tune "Anacreon in Heaven" (attributed to British composer John Stafford Smith). The poem appeared in several newspapers within days and spread quickly.

The garrison flag that Key saw the morning after the bombardment is preserved at the Smithsonian Institution's National Museum of American History in Washington, DC. Major George Armistead, the commander of the militia unit stationed at Fort McHenry, had ordered a flag "so large that the British will have no difficulty seeing it from a distance." A government contract paid Baltimore flagmaker Mary Pickersgill \$405.90 in 1813 for the garrison flag and \$168.54 for a smaller storm flag (which was flown during the battle itself). The garrison flag originally measured 30 by 42 ft and had 15 alternating red and white stripes and 15 stars, for the original 13 states plus Kentucky and Vermont. The preserved flag measures 30 by 34 ft and is missing one star. Before the flag was placed in a museum, the family holding the flag would give clippings of it away as souvenirs.

The Star-Spangled Banner

I

Oh, say can you see by the dawn's early light
What so proudly we hailed at the twilight's last gleaming?
Whose broad stripes and bright stars through the perilous
fight,

O'er the ramparts we watched were so gallantly
streaming?

And the rockets' red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there.
Oh, say does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

II

On the shore, dimly seen through the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected now shines in the stream:
'Tis the star-spangled banner! Oh long may it wave
O'er the land of the free and the home of the brave!

III

And where is that band who so vauntingly swore
That the havoc of war and the battle's confusion,
A home and a country should leave us no more!
Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave!

IV

Oh! thus be it ever, when freemen shall stand
Between their loved home and the war's desolation!
Blest with victory and peace, may the heav'n rescued land
Praise the Power that hath made and preserved us a
nation.

Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust."
And the star-spangled banner in triumph shall wave

O'er the land of the free and the home of the brave!

Statue of Liberty National Monument

Since 1886, the Statue of Liberty, formally known as “Liberty Enlightening the World,” has stood as a symbol of freedom in New York Harbor. A gift from the people of France to the people of the U.S., it initially was conceived by legal philosopher Édouard de Laboulaye and intended to celebrate the U.S. centennial and commemorate the abolition of slavery. It was designed by French sculptor Frédéric Auguste Bartholdi (1834-1904).

On Feb. 22, 1877, Congress approved the use of a site on Bedloe’s Island suggested by Bartholdi. This island of 12 acres had been owned in the 17th cent. by a colonist named Isaac Bedloe. (On Aug. 3, 1956, Pres. Dwight Eisenhower approved a measure changing the name to Liberty Island.)

The statue was finished on May 21, 1884, and presented to the U.S. minister to France, Levi Parsons Morton, July 4, 1884, by French diplomat Ferdinand de Lesseps.

On Aug. 5, 1884, the cornerstone for the granite pedestal—designed by architect Richard Morris Hunt—was laid on the foundations of Fort Wood, erected by the government in 1811. The American Committee for the Statue of Liberty had raised an inadequate \$125,000, and *New York World* newspaper owner Joseph Pulitzer appealed Mar. 16, 1885, for general donations. By Aug. 11, 1885, he had raised \$100,000. The statue itself arrived dismantled, in 214 packing cases, from Rouen, France, in June 1885. The last rivet of the statue was driven on Oct. 28, 1886, when Pres. Grover Cleveland dedicated the monument.

The Statue of Liberty National Monument was designated as such in 1924. It is administered by the National Park Service. A \$2.5-mil building housing the American Museum of Immigration was opened by Pres. Richard Nixon on Sept. 26, 1972, at the base of the statue. It houses a permanent exhibition tracing the history of American immigration.

Four years of restoration work funded and led by the Statue of Liberty-Ellis Island Foundation were completed before the statue's 1986 centennial. The \$87-mil project included the replacement of the 1,600 wrought iron bands that hold the statue's copper skin to its frame, replacement of the torch, and installation of an elevator. A four-day extravaganza of concerts, tall ships, cultural and heritage festivals, and fireworks, July 3-6, 1986, celebrated the 100th anniversary. U.S. Supreme Court Chief Justice Warren E. Burger swore in 5,000 new citizens on Ellis Island, while 20,000 others across the country were sworn in through a satellite telecast. Other ceremonies followed on Oct. 28, 1986, the statue's exact 100th birthday.

After the Sept. 11, 2001, terrorist attacks, Liberty Island was closed to visitors. The secretary of the interior reopened the island in Dec. 2001 after installing security screening facilities at passenger embarkation areas at Battery Park in Manhattan and Liberty State Park in New Jersey.

The federal government increased security throughout the park before reopening the statue. In addition to federally funded security upgrades, significant building safety improvements were made. Public access to the statue pedestal was restored in Aug. 2004, and the crown reopened July 4, 2009.

Following the 125th anniversary celebration Oct. 28, 2011, the statue was closed. A \$30-mil renovation brought the statue up to contemporary safety standards and allowed for increased visitor access. The statue interior reopened Oct. 28, 2012, but damages caused by Hurricane Sandy forced all of Liberty Island to close again within days. The island and the statue officially reopened to visitors July 4, 2013. A new, 26,000-sq-ft Statue of Liberty Museum opened in May 2019.

Ferry service to Liberty Island and to Ellis Island, from Battery Park in New York City and from Liberty State Park in New Jersey was suspended Mar. 16, 2020, in response to the COVID-19 outbreak, but resumed in July 2021, available only by specific time of departure. As of mid-2022 there was public access to the Statue of Liberty Museum and theater, as well as (with reservations) to the

statue pedestal. The Statue of Liberty crown remained closed. Reservations were recommended; they can be made at www.statuecruises.com or by calling 1-877-LADY-TIX. Before visiting, check www.nps.gov/stli for latest information on openings and fees and on guidelines, including age and height restrictions. Park rangers conduct English-language tours throughout the day. Standard self-guided audio tours and a family-friendly audio tour (aimed at children ages 6-10) are available in a number of languages.

Statue Statistics

The statue weighs 450,000 lbs, or 225 tons. The copper sheeting weighs 200,000 lbs. There are 377 steps from the main lobby to the crown platform. There are 146 steps from the top of the pedestal (the statue's feet) to the crown platform.

Statue feature	Measurement	
	Ft	In.
Height from base to torch tip	151	1
Foundation of pedestal to torch tip	305	1

Right arm, length	42	0
Right arm, max. thickness	12	0
Waist, thickness	35	0
Mouth, width	3	0
Tablet, length	23	7
Tablet, width	13	7

Ellis Island

Ellis Island was the gateway to America for over 12 mil immigrants between 1892 and 1954. In the late 18th cent., Samuel Ellis, a New York City merchant, purchased the island. From Ellis, it passed to New York state before the U.S. government bought it in 1890. On Jan. 1, 1892, the government opened the first federal immigration center in the U.S. there. The 27.5-acre site eventually supported over 35 buildings, including the Main Building with its Great Hall, designed to process 5,000 people a day. In Ellis Island's peak year, 1907, it received 1,004,756 immigrants; on its peak day (Apr. 17, 1907), 11,747 immigrants were processed.

Closed as an immigration station in 1954, Ellis Island was proclaimed part of the Statue of Liberty National Monument in 1965 by Pres. Lyndon B. Johnson. After a six-year, \$170-mil restoration project funded by the Statue of Liberty-Ellis Island Foundation, Ellis Island was reopened as a museum in 1990, now called the Ellis Island National Museum of Immigration. Artifacts, historic photographs and documents, oral histories, and ethnic music depicting 400 years of American immigration are housed in the museum.

In 1998, the U.S. Supreme Court ruled that nearly 90% of the island (the 24.2 acres that are landfill) lies in New Jersey, while the original 3.3 acres, on which the museum is located, are in New York. (The decision settled the issue of jurisdiction over potential development.)

The American Family Immigration History Center opened in Apr. 2001. Visitors can access arrival records on over 51 mil individuals who entered through the Port of New York and Ellis Island from 1892 to 1957. The searchable digitized archives include ships' images and manifests and passenger information such as age, ethnicity, and port of departure. **Website:** www.libertyellisfoundation.org

Damage caused by storm surges from Hurricane Sandy in late Oct. 2012 forced Ellis Island to close for repairs. It reopened Oct. 28, 2013, and new galleries focusing on post-Ellis Island-era immigration opened May 20, 2015.

Ellis Island was closed Mar. 16, 2020, in response to the COVID-19 outbreak, but reopened in summer 2020, with limited capacity.

(1) Resigned Dec. 28, 1832, having been elected to the Senate to fill a vacancy. (2) Richard M. Johnson was the only vice president to be chosen by the Senate because of a tied vote in the Electoral College. (3) Democrat Andrew Johnson was nominated vice president by Republicans and elected with Lincoln on the National Union ticket. (4) Grandfather of Democratic candidate for president in 1952 and 1956. (5) Resigned Oct. 10, 1973, after pleading no contest to a charge of tax evasion. (6) First nonelected vice president, chosen under 25th Amendment procedure. (7) Second nonelected vice president, chosen under 25th Amendment.

Biographies of the Presidents

George Washington (1789-97), first president, Federalist, was born on Feb. 22, 1732, in Wakefield on Pope's Creek, Westmoreland Co., VA, the son of Augustine and Mary Ball Washington. He spent his early childhood on a farm near Fredericksburg. His father died when Washington was 11. He studied mathematics and surveying, and at 16, he went to live with his elder half brother, Lawrence, who built and named Mount Vernon in Virginia. Washington surveyed the lands of Thomas Fairfax in the Shenandoah Valley. He accompanied Lawrence to Barbados, West Indies, where he contracted smallpox and was deeply scarred. Lawrence died in 1752, and Washington inherited his property. He valued land, and when he died, he was a slaveholder who owned 70,000 acres in Virginia and 40,000 acres in what is now West Virginia.

Washington's military service began in 1753, when Lt. Gov. Robert Dinwiddie of Virginia sent him on missions deep into Ohio country. He clashed with the French and had to surrender Fort Necessity on July 3, 1754. He was an aide to the British general Edward Braddock and was at his side when the army was ambushed and defeated (July 9, 1755) on a march to Fort Duquesne. He helped take Fort Duquesne from the French in 1758.

After Washington's marriage to Martha Dandridge Custis, a widow, in 1759, he managed his family estate at Mount Vernon. Although not in favor of independence initially, he opposed the repressive measures of the British crown and took charge of the Virginia troops before war broke out. He was made commander of the newly created Continental Army by the Continental Congress on June 15, 1775.

The American victory was due largely to Washington's leadership. He was resourceful, a disciplinarian, and a dependable force for unity. Washington favored a federal government. He became chairman of the Constitutional Convention of 1787 and helped get the Constitution ratified. Unanimously elected president by the Electoral College, he was inaugurated Apr. 30, 1789, on the balcony of New York's Federal Hall. He was reelected in 1792. Washington made an effort to avoid partisan politics as president.

Refusing to consider a third term, Washington retired to Mount Vernon in Mar. 1797. A ride in snow and rain around his estate led to what present-day doctors believe to have been an attack of acute epiglottitis. Doctors were unsuccessful in treating the inflammation in his throat, and Washington died Dec. 14, 1799.

John Adams (1797-1801), second president, Federalist, was born on Oct. 30, 1735, in Braintree (now Quincy), MA, the son of John and Susanna Boylston Adams. He was a great-grandson of Henry Adams, who came from England in 1636. He graduated from Harvard in 1755, then taught school and studied law. He married Abigail Smith in 1764. In 1770, he successfully defended in court the British soldiers who fired on civilians in the Boston Massacre. He was a delegate to the Continental Congress and a signer of the Declaration of Independence. In 1778, Congress sent Adams and John Jay to join Benjamin Franklin as diplomatic representatives in Europe. Because he ran second to Washington in Electoral College balloting in Feb. 1789, Adams became the nation's first vice president, a post he characterized as highly insignificant; he was reelected in 1792.

In 1796 Adams was chosen president by the electors. His administration was marked by growing conflict with fellow Federalist Alexander Hamilton and with those in his cabinet who shared Hamilton's anti-French position. Adams avoided a declared war with France but became unpopular, especially after securing passage of the Alien and Sedition Acts, which restricted speech critical of the government, in 1798. His foreign policy contributed significantly to the election of Thomas Jefferson in 1800.

Adams lived for a quarter century after he left office, during which time he wrote extensively. He died July 4, 1826, on the same day as his rival Thomas Jefferson (the 50th anniversary of the Declaration of Independence).

Thomas Jefferson (1801-09), third president, Democratic-Republican, was born on Apr. 13, 1743, in Shadwell in Goochland (now Albemarle) Co., VA, the son of Peter and Jane Randolph Jefferson. His father died when Jefferson was 14, leaving him 2,750 acres and his slaves. Jefferson attended (1760-62) the College of William and Mary, read Greek and Latin classics, and played the violin. In 1769 he was elected to the Virginia House of Burgesses. In 1770 he began building his home, Monticello, and in 1772 he married Martha Wayles Skelton, a wealthy widow. Jefferson helped establish the Virginia Committee of Correspondence. As a member of the Second Continental Congress he drafted the Declaration of Independence. He also was a member of the Virginia House of Delegates (1776-79) and was elected governor of Virginia in 1779. He resigned in 1781, after British troops invaded Virginia. During his term he wrote the Virginia Statute of Religious Freedom. After his wife's death in 1782, Jefferson again became a delegate to the Congress, and in 1784 he drafted the report that was the basis for the Ordinances of 1784, 1785, and 1787. He was minister to France from 1785 to 1789, when George Washington appointed him secretary of state.

Jefferson's strong faith in the consent of the governed conflicted with the emphasis on executive control, favored by Sec. of the Treasury Alexander Hamilton, and Jefferson resigned as secretary of state on Dec. 31, 1793. In the 1796 election Jefferson was the Democratic-Republican candidate for president; John Adams won the election, and Jefferson became vice president. In 1800, Jefferson and Aaron Burr received equal numbers of Electoral College votes; the House of Representatives elected Jefferson president. Jefferson was a strong advocate of westward expansion; major events of his first term were the Louisiana Purchase (1803) and the Lewis and Clark expedition. His second term saw the passage of the Embargo Act, barring U.S. ships from setting sail to foreign ports and forbidding foreign ships from loading cargo in U.S. ports. Jefferson established the Univ. of Virginia and designed its buildings. He died July 4, 1826, on the same day as John Adams (the 50th anniversary of the Declaration of Independence).

Jefferson called slavery a "moral depravity" and violation of natural rights, but he profited from it as a slaveholder. He advocated gradual emancipation through voting, in conjunction with deportation. Based partly on DNA taken from descendants of Jefferson and of Sally Hemings, an enslaved woman who lived at Monticello from a young age, many historians conclude that Jefferson fathered one or more of her six children.

James Madison (1809-17), fourth president, Democratic-Republican, was born on Mar. 16, 1751, in Port Conway, King George Co., VA, the son of James and Eleanor Rose Conway Madison. Madison graduated from the College of New Jersey in 1771. He served in the Virginia Constitutional Convention (1776), and, in 1780, became a delegate to the Second Continental Congress. He was chief recorder at the Constitutional Convention in 1787 and supported ratification in the *Federalist Papers*, written with Alexander Hamilton and John Jay. In 1789, Madison was elected to the House of Representatives, where he helped frame the Bill of Rights and fought against passage of the Alien and Sedition Acts. In the 1790s, he helped found the Democratic-Republican Party, which ultimately became the Democratic Party. He became Jefferson's secretary of state in 1801.

Madison was elected president in 1808. His first term was marked by tensions with Great Britain, and his conduct of foreign policy was criticized by the Federalists and by his own party. Nevertheless, he was reelected in 1812, the year war was declared on Great Britain. The war that many considered a second American revolution ended with a treaty that did not settle any of the issues.

Madison's most important action after the war was demilitarizing the U.S.-Canadian border.

In 1817, Madison retired to his Virginia plantation, Montpelier, which made use of slave labor. He edited his famous papers on the Constitutional Convention and helped found the Univ. of Virginia, of which he became rector in 1826. He died June 28, 1836.

James Monroe (1817-25), fifth president, Democratic-Republican, was born on Apr. 28, 1758, in Westmoreland Co., VA, the son of Spence and Elizabeth Jones Monroe. He entered the College of William and Mary in 1774 but left to serve in the Third Virginia Regiment during the American Revolution. After the war, he studied law with Thomas Jefferson. In 1782 he was elected to the Virginia House of Delegates, and he served (1783-86) as a delegate to the Continental Congress. He opposed ratification of the Constitution because it lacked a bill of rights. Monroe was elected to the U.S. Senate in 1790. In 1794, Pres. Washington appointed Monroe minister to France. He was again minister to France (1803) under Pres. Jefferson as well as minister to Great Britain (1803-07). He served twice as governor of Virginia (1799-1802, 1811).

In 1816 Monroe was elected president; he was reelected in 1820 with all but one Electoral College vote. His administration became known as the Era of Good Feeling. He obtained Florida from Spain, settled boundary disputes with Britain over Canada, and eliminated border forts. Though a slaveholder himself, he supported the anti-slavery position that led to the Missouri Compromise. His most significant contribution was the Monroe Doctrine, which opposed European intervention in the Western Hemisphere and became a cornerstone of U.S. foreign policy.

Although Monroe retired to Oak Hill, VA, financial problems forced him to sell his property and move to New York City. He died there on July 4, 1831.

John Quincy Adams (1825-29), sixth president, independent Federalist, later Democratic-Republican, was born on July 11, 1767, in Braintree (now Quincy), MA, the son of John and Abigail Adams. His father was the second president. He studied abroad and at Harvard College, from which he graduated in 1787. In 1803, he was elected to the U.S. Senate. President Monroe chose him as his secretary of state in 1817. In this capacity he negotiated the cession

of Florida from Spain, supported exclusion of slavery in the Missouri Compromise, and helped formulate the Monroe Doctrine.

After no candidate won an Electoral College majority in 1824, the presidential election was decided by the House of Representatives. Adams won with support from rival Henry Clay, whom he named secretary of state, fueling accusations of a “corrupt bargain.” His expansion of executive powers was strongly opposed, and in the 1828 election he lost to Andrew Jackson. In 1831 he entered the House of Representatives and served 17 years. He opposed slavery, the annexation of Texas, and the Mexican War. He helped establish the Smithsonian Institution.

Adams suffered a stroke in the House and died in the Speaker’s Room on Feb. 23, 1848.

Andrew Jackson (1829-37), seventh president, Democratic-Republican, later a Democrat, was born on Mar. 15, 1767, in the Waxhaw district, on the border of North and South Carolina, the son of Andrew and Elizabeth Hutchinson Jackson. At the age of 13, he joined the militia to fight in the American Revolution and was captured. Orphaned at age 14, Jackson was raised by an uncle. By age 20, he was practicing law, and he later served as prosecuting

attorney in Nashville, TN. In 1796 he helped draft the constitution of Tennessee, and for a year he occupied its one seat in the House of Representatives. The next year he served in the U.S. Senate.

In the War of 1812, Jackson crushed the Creek Indians at Horseshoe Bend, AL (1814), and, with a greatly outnumbered army consisting chiefly of militia members, privateers, Choctaw Indians, and other volunteer fighters, defeated Gen. Edward Pakenham's British troops at the Battle of New Orleans (1815). Nicknamed "Old Hickory" for his toughness, he emerged a national hero.

In 1818 Jackson briefly invaded Spanish Florida to quell Seminoles and outlaws who harassed frontier settlements. He ran for president against John Quincy Adams in 1824, but did not achieve a majority despite winning the most popular and electoral votes. The House of Representatives decided the election and chose Adams. In the 1828 election, however, Jackson, a slaveholder, defeated Adams by carrying the West and the South.

As president, Jackson introduced what became known as the spoils system—rewarding party members with government posts. A self-professed champion of the common man, he also viewed the Second Bank of the U.S. as a bastion of privilege and made it a major issue in the election of 1832, the first where candidates were chosen at national conventions rather than in congressional caucuses. Defeating Henry Clay, Jackson increasingly diverted funds from the national bank into so-called pet banks run by members of his own party. When South Carolina refused to collect imports under a federal tariff, which it declared null and void, Jackson won passage of legislation confirming his right to use military force to obtain compliance; eventually the tariff rate was reduced and the nullifiers backed down. After leaving office in 1837, he retired to the Hermitage, his estate outside Nashville, where he died on June 8, 1845.

Martin Van Buren (1837-41), eighth president, Democrat, was born on Dec. 5, 1782, in Kinderhook, NY, the son of Abraham and Maria Hoes Van Buren. After attending local schools, he studied law and became a lawyer at the age of 20. A consummate politician, Van Buren began his career in the New York state senate and then served as state attorney general (1816-19). He was elected to the U.S. Senate in 1821. He helped swing Eastern support to Andrew Jackson in the 1828 election and served as Jackson's secretary of state from 1829 to 1831. In 1832 he was elected vice president. Known as the "Little Magician," Van Buren was extremely influential in Jackson's administration.

In 1836, Van Buren defeated William Henry Harrison for president and took office as the financial panic of 1837 initiated a nationwide depression. Although he instituted the independent treasury system, his refusal to spend land revenues led to his defeat by William Henry Harrison in 1840. In 1844 he lost the Democratic nomination to James K. Polk. In 1848 he again ran for president on the Free Soil ticket but lost. He died in Kinderhook on July 24, 1862.

William Henry Harrison (1841), ninth president, Whig, who served only 31 days, was born on Feb. 9, 1773, in Berkeley, Charles City Co., VA, the son of Benjamin Harrison—a signer of the Declaration of Independence—and of Elizabeth Bassett Harrison. He attended Hampden-Sydney College. Harrison served as secretary of the Northwest Territory in 1798 and was its delegate to the House of Representatives in 1799. He was the first governor of Indiana Territory and served as superintendent of Indian affairs. Leading some 950 troops, he repelled an attack by Shawnee Indians at Tippecanoe, IN, on Nov. 7, 1811. A generation later, in 1840, he waged a rousing presidential campaign using the slogan “Tippecanoe and Tyler Too.” The Tyler of the slogan was his running mate, John Tyler.

Although born to one of the wealthiest, most prestigious, and most influential families in Virginia, Harrison also campaigned with the slogan “Log Cabin and Hard Cider.” He died Apr. 4, 1841, after only one month in office, of what doctors now believe was typhoid fever.

John Tyler (1841-45), 10th president, independent Whig, was born on Mar. 29, 1790, in Greenway, Charles City Co., VA, the son of John and Mary Armistead Tyler. His father was governor of Virginia (1808-11). Tyler graduated from the College of William and Mary in 1807 and in 1811 was elected to the Virginia legislature. In 1816 he was chosen for the U.S. House of Representatives. He served in the Virginia legislature again from 1823 to 1825, when he was elected governor of Virginia. After a stint in the U.S. Senate (1827-36), he was elected vice president (1840).

When William Henry Harrison died only a month after taking office, Tyler succeeded him. Because he was the first person to occupy the presidency without having been elected to that office, he was referred to as "His Accidency." He gained passage of the Preemption Act of 1841, which gave squatters on government land the right to buy 160 acres at the minimum auction price. His last act as president was to sign a resolution annexing Texas. Tyler accepted renomination in 1844 from some Democrats but withdrew in favor of the official party candidate, James K. Polk. A slaveholder who consistently supported the expansion of slavery, he served briefly in

the Confederate House of Representatives before he died in Richmond, VA, on Jan. 18, 1862.

James Knox Polk (1845-49), 11th president, Democrat, was born on Nov. 2, 1795, in Mecklenburg Co., NC, the son of Samuel and Jane Knox Polk. He graduated from the Univ. of North Carolina in 1818 and served in the Tennessee state legislature from 1823 to 1825. He served in the U.S. House of Representatives from 1825 to 1839, the last four years as Speaker. He was governor of Tennessee from 1839 to 1841. In 1844, after the Democratic National Convention became deadlocked, it nominated Polk, who became the first “dark horse” candidate for president. He was nominated primarily because he favored annexation of Texas and tolerated slavery.

As president, Polk reestablished the independent treasury system originated by Van Buren. He was so intent on acquiring California from Mexico that he sent troops to the Mexican border and declared a state of war after Mexicans attacked. The Mexican War ended with the annexation of California and much of the Southwest as part of America’s “manifest destiny.” Polk compromised on the Oregon boundary (“54-40 or fight!”) by accepting the 49th parallel

and yielding Vancouver Island to the British. Polk died in Nashville, TN, on June 15, 1849, a few months after leaving office.

Zachary Taylor (1849-50), 12th president, Whig, who served only 16 months, was born on Nov. 24, 1784, in Orange Co., VA, the son of Richard and Sarah Strother Taylor. He grew up on his father's plantation near Louisville, KY, where the work was done by enslaved persons and he was educated by private tutors. In 1808 Taylor joined the regular army and was commissioned first lieutenant. He fought in the War of 1812, the Black Hawk War (1832), and the second Seminole War (beginning in 1837). He was called "Old Rough and Ready" for his military prowess. In 1846 Pres. Polk sent him with an army to the Rio Grande. When the Mexicans attacked him, Polk declared war. Outnumbered four to one, Taylor defeated Antonio López de Santa Anna at Buena Vista (1847).

A national hero, Taylor received the Whig nomination in 1848 and was elected president, even though he had never bothered to vote. He resumed the spoils system and, though a slaveholder, worked to admit California as a free state. He fell ill, likely from a case of acute gastroenteritis, and died in office on July 9, 1850.

Millard Fillmore (1850-53), 13th president, Whig, was born on Jan. 7, 1800, in Cayuga Co., NY, the son of Nathaniel and Phoebe Millard Fillmore. Although he had little schooling, he became a law clerk at the age of 22 and was admitted to the bar a year later. He was elected to the New York state assembly in 1828 and served until 1831. From 1833 until 1835 and again from 1837 to 1843, he represented his district in the U.S. House of Representatives. He opposed the entrance of Texas as a slave state and voted for a protective tariff. In 1844 he was defeated for governor of New York.

In 1848, he was elected vice president; he became president after Taylor's death. Fillmore favored the Compromise of 1850 and signed the Fugitive Slave Law. His policies pleased neither expansionists nor slaveholders, and he was not renominated in 1852. In 1856 he was nominated by the American (Know-Nothing) Party, but despite the support of the Whigs, he was defeated by James Buchanan. He died in Buffalo, NY, on Mar. 8, 1874.

Franklin Pierce (1853-57), 14th president, Democrat, was born on Nov. 23, 1804, in Hillsboro, NH, the son of Benjamin Pierce, Revolutionary War general and governor of New Hampshire, and Anna Kendrick. He graduated from Bowdoin College in 1824 and was admitted to the bar in 1827. He was elected to the New Hampshire state legislature in 1829 and was chosen Speaker in 1831. He went to the U.S. House in 1833 and was elected a U.S. senator in 1837. He enlisted in the Mexican War and became brigadier general under Gen. Winfield Scott.

In 1852 Pierce was nominated as the Democratic presidential candidate on the 49th ballot. He decisively defeated Gen. Scott, his Whig opponent, in the election. Although he was against slavery, Pierce was influenced by proslavery Southerners. He supported the controversial Kansas-Nebraska Act, which left the question of slavery in the new territories of Kansas and Nebraska to popular vote. Pierce signed a reciprocity treaty with Canada and approved the Gadsden Purchase, from Mexico, of a border area on a proposed railroad route. Denied renomination, he spent most of his remaining years in Concord, NH, where he died on Oct. 8, 1869.

James Buchanan (1857-61), 15th president, Federalist, later Democrat, was born on Apr. 23, 1791, near Mercersburg, PA, the son of James and Elizabeth Speer Buchanan. He graduated from Dickinson College in 1809 and was admitted to the bar in 1812. He fought in the War of 1812 as a volunteer. He was twice elected to the Pennsylvania general assembly, and in 1821 he entered the U.S. House of Representatives. After briefly serving (1832-33) as minister to Russia, he was elected U.S. senator from Pennsylvania. As Polk's secretary of state (1845-49), he ended the Oregon dispute with Britain and supported the Mexican War and annexation of Texas. As minister to Great Britain, he signed the Ostend Manifesto (1854), declaring a U.S. right to take Cuba by force should efforts to purchase it fail.

Nominated by Democrats, Buchanan was elected president in 1856. On slavery he favored popular sovereignty and choice by state constitutions but did not consistently uphold this position. He denied the right of states to secede but opposed coercion and attempted to keep peace by not provoking secessionists. Buchanan left office having failed to deal decisively with the situation. He died at Wheatland, his estate, near Lancaster, PA, on June 1, 1868.

Abraham Lincoln (1861-65), 16th president, Whig, then Republican, was born on Feb. 12, 1809, in a log cabin on a farm in Hardin (now Larue) Co., KY, the son of Thomas and Nancy Hanks Lincoln. The Lincolns moved to Spencer Co., IN, near Gentryville, when Lincoln was 7. After Lincoln's mother died, his father married Mrs. Sarah Bush Johnston in 1819. In 1830 the family moved to Macon Co., IL.

Defeated in 1832 in a race for the state legislature, Lincoln was elected on the Whig ticket two years later and served in the lower house from 1834 to 1842. In 1837 Lincoln was admitted to the bar and became partner in a Springfield, IL, law office. In 1846, he was elected to Congress, where he attracted attention during a single term for his opposition to the Mexican War and his position on slavery. In 1856 he campaigned for the newly founded Republican Party, and in 1858 he became its senatorial candidate against Stephen A. Douglas. Although he lost the election, Lincoln gained national recognition from his debates with Douglas.

In 1860, Lincoln was nominated for president by the Republican Party on a platform of restricting slavery. He ran against Douglas, a northern Democrat; John C. Breckinridge, a Southern proslavery

Democrat; and John Bell, of the Constitutional Union Party. In response to Lincoln's victory, South Carolina seceded from the Union on Dec. 20, 1860, soon followed by six other Southern states.

The Civil War erupted when South Carolina's Fort Sumter, which Lincoln decided to resupply, was attacked by Confederate forces on Apr. 12, 1861. Lincoln called for recruits from the North, and four more Southern states seceded. Hundreds of thousands of Union and Confederate soldiers were killed or wounded in four years of battle that followed. On Sept. 22, 1862, five days after the Battle of Antietam, Lincoln announced that those who were enslaved in territory then in rebellion would be free Jan. 1, 1863, under his Emancipation Proclamation. His speeches, including his Gettysburg and inaugural addresses, are remembered for their eloquence.

Lincoln was reelected, in 1864, over Gen. George B. McClellan, a Democrat. Confederate Gen. Robert E. Lee surrendered on Apr. 9, 1865. On Apr. 14, Lincoln was shot by actor John Wilkes Booth in Ford's Theatre, in Washington, DC. He died the next day.

Andrew Johnson (1865-69), 17th president, Democrat, was born on Dec. 29, 1808, in Raleigh, NC, the son of Jacob and Mary McDonough Johnson. He was apprenticed to a tailor as a youth but

ran away after two years and eventually settled in Greeneville, TN, where he was elected councilman and later mayor. In 1835 he was sent to the state general assembly. In 1843 he was elected to the U.S. House of Representatives, where he served for 10 years. Johnson was also governor of Tennessee from 1853 to 1857, when he was elected to the U.S. Senate.

Although Johnson had himself exploited enslaved labor, he opposed secession and tried to prevent Tennessee from seceding. In Mar. 1862, Lincoln appointed him military governor of occupied Tennessee.

In 1864, in order to balance Lincoln's ticket with a Southern Democrat, the Republicans nominated Johnson for vice president. He was elected vice president with Lincoln and succeeded to the presidency upon Lincoln's death. Soon afterward, in conflict with Congress over the president's power over the South, he proclaimed an amnesty to all Confederates, except certain leaders, if they would ratify the 13th Amendment abolishing slavery. States doing so added anti-Negro provisions that enraged Congress, which restored military control over the South. When Johnson removed Sec. of War Edwin M. Stanton without notifying the Senate, the House impeached him in Feb. 1868 on the charge of violating the Tenure of Office Act. In reality, the House was responding to his opposition to harsh congressional Reconstruction, expressed in repeated vetoes. He was acquitted in the Senate by one-vote margins on each of two counts.

Johnson was denied renomination but remained politically active. He was reelected to the Senate in 1874. Johnson died July 31, 1875, at Carter Station, TN.

Ulysses S. Grant (1869-77), 18th president, Republican, was born on Apr. 27, 1822, in Point Pleasant, OH, the son of Jesse R. and Hannah Simpson Grant. The next year the family moved to Georgetown, OH. Grant was named Hiram Ulysses. Upon entering West Point in 1839, he found his name had been put down as Ulysses S. Grant, with his middle name first and his mother's maiden name as his middle name. He eventually adopted it as his true name but maintained the "S" did not stand for anything. Grant graduated in 1843.

During the Mexican War, Grant served under both Gen. Zachary Taylor and Gen. Winfield Scott. In 1854, he resigned his commission because of loneliness and drinking problems, and in the following years he engaged in generally unsuccessful farming and business ventures. With the start of the Civil War, he was named colonel and then brigadier general of the Illinois Volunteers. He took Forts Henry and Donelson and fought at Shiloh. His brilliant campaign against Vicksburg and his victory at Chattanooga made him so prominent that Lincoln placed him in command of all Union armies. Grant accepted Confederate Gen. Robert E. Lee's surrender at Appomattox Court House on Apr. 9, 1865.

Grant was nominated for president by the Republicans in 1868 and elected over Democrat Horatio Seymour. The 15th Amendment, the amnesty bill, and peaceful settlement of disputes with Great Britain were events of his administration. The Liberal Republicans and Democrats opposed him with Horace Greeley in the 1872 election, but Grant was reelected. His second administration was marked by scandals, including the Crédit Mobilier affair, the Whiskey Ring, in which high-ranked officials conspired to defraud the government of taxes, and the impeachment of his secretary of war. An attempt by the Stalwarts (Old Guard Republicans) to nominate him in 1880 failed. Left penniless by the 1884 collapse of an investment firm in which he was a partner, he wrote his well-regarded memoirs while suffering from cancer to provide income for his family. He died at Mt. McGregor, NY, on July 23, 1885.

Rutherford Birchard Hayes (1877-81), 19th president, Republican, was born on Oct. 4, 1822, in Delaware, OH, the son of Rutherford and Sophia Birchard Hayes. He was reared by his uncle, Sardis Birchard. Hayes graduated from Kenyon College in 1842 and from Harvard Law School in 1845. He practiced law in Lower Sandusky (now Fremont), OH, and was city solicitor of Cincinnati.

from 1858 to 1861. During the Civil War, he was major of the 23rd Ohio Volunteers. He was wounded several times, and by the end of the war he had risen to the rank of brevet major general. While serving (1865-67) in the U.S. House of Representatives, Hayes supported Reconstruction and Johnson's impeachment. He was twice elected governor of Ohio (1867, 1869). After losing a race for the U.S. House in 1872, he was reelected governor of Ohio in 1875.

In 1876, Hayes was nominated for president. He believed he had lost the election to Democrat Samuel J. Tilden. But a few Southern states submitted two sets of electoral votes, and the result was in dispute. An electoral commission, consisting of 8 Republicans and 7 Democrats, awarded all disputed votes to Hayes, allowing him to become president by one electoral vote. Hayes, keeping a promise to Southerners, withdrew troops from areas still occupied in the South, ending the era of Reconstruction. He proposed civil service reforms, alienating those favoring the spoils system, and advocated repeal of the Tenure of Office Act restricting presidential power to dismiss officials. He supported sound money and specie payments.

Hayes died in Fremont, OH, on Jan. 17, 1893.

James Abram Garfield (1881), 20th president, Republican, was born on Nov. 19, 1831, in Orange, Cuyahoga Co., OH, the son of Abram and Eliza Ballou Garfield. His father died in 1833, and he was reared in poverty by his mother. He worked as a canal bargeman, a farmer, and a carpenter. He attended Western Reserve Eclectic Institute and graduated from Williams College in 1856. He returned to Western Reserve to teach and in 1857, at age 25, he became the school's president. In 1859 he was elected to the Ohio legislature. Anti-slavery and anti-secession, he volunteered for military service in the Civil War, becoming colonel of the 42nd Ohio Infantry and brigadier in 1862. He fought at Shiloh, TN, was chief of staff for Gen. William Starke Rosecrans, and was made major general for gallantry at Chickamauga, GA. He entered Congress as a radical Republican in 1863, calling for execution or exile of Confederate leaders, but he moderated his views after the Civil War. On the electoral commission in 1877 he voted for Hayes against Tilden on strict party lines.

Garfield was a senator-elect in 1880 when he became the Republican nominee for president. He was chosen as a compromise over Gen. Grant, James G. Blaine, and John Sherman, and won election despite some bitterness among Grant's supporters. For much of his brief tenure as president, Garfield was concerned with a fight with New York Sen. Roscoe Conkling, who opposed two major appointments made by Garfield. On July 2, 1881, Garfield was shot and seriously wounded by a mentally disturbed office seeker, Charles J. Guiteau, while entering a railroad station in Washington, DC. He died on Sept. 19, 1881, in Elberon, NJ.

Chester Alan Arthur (1881-85), 21st president, Republican, was born on Oct. 5, 1829, in Fairfield, VT, to William and Malvina Stone Arthur. He graduated from Union College in 1848, taught school in Vermont, then studied law and practiced in New York City. In 1853, he argued that fugitives from enslaved labor transported through New York State were thereby freed. In 1871, he was appointed collector of the Port of New York. Pres. Hayes, an opponent of the spoils system, forced him to resign in 1878. This made the New York machine enemies of Hayes. Arthur and the Stalwarts (Old Guard Republicans) tried to nominate Grant for a third term as president in 1880. When Garfield was nominated, Arthur was nominated for vice president in the interests of harmony.

Upon Garfield's assassination, Arthur became president. Despite his past connections, he signed major civil service reform legislation. Arthur tried to dissuade Congress from enacting the high protective tariff of 1883. He was defeated for renomination in 1884 by James G. Blaine. He died in New York City on Nov. 18, 1886.

(Stephen) Grover Cleveland (1885-89; 1893-97) (*According to a State Dept. ruling, Grover Cleveland should be counted as both the 22nd and the 24th president because his two terms were not consecutive*), Democrat, was born Stephen Grover Cleveland on Mar. 18, 1837, in Caldwell, NJ, the son of Richard F. and Ann Neal Cleveland. When he was a small boy, his family moved to New York. Prevented by his father's death from attending college, he studied on his own and was admitted to the bar in Buffalo, NY, in 1859. In succession he became assistant district attorney (1863), sheriff (1871), mayor (1881), and governor of New York (1882). He was an independent, honest administrator who hated corruption. Cleveland was nominated for president over opposition from New York City's Democratic party machine Tammany Hall in 1884 and defeated Republican James G. Blaine.

As president, he enlarged the civil service and vetoed many pension raids on the Treasury. In the 1888 election he was defeated by Benjamin Harrison, although his popular vote was larger. Reelected over Harrison in 1892, he faced a money crisis brought about by a lowered gold reserve, circulation of paper, and exorbitant silver purchases under the Sherman Silver Purchase Act. He

obtained a repeal of the Sherman Act but was unable to secure effective tariff reform. A severe economic depression and labor troubles racked his administration, but he refused to interfere in business matters and rejected business owner Jacob Coxey's demand for unemployment relief. In 1894, he broke the Pullman railroad workers' strike. Cleveland was not renominated in 1896. He died in Princeton, NJ, on June 24, 1908.

Benjamin Harrison (1889-93), 23rd president, Republican, was born on Aug. 20, 1833, in North Bend, OH, the son of John Scott and Elizabeth Irwin Harrison. His great-grandfather, Benjamin Harrison, was a signer of the Declaration of Independence; his grandfather, William Henry Harrison, was the ninth president; his father was a member of Congress. He attended school on his father's farm and graduated from Miami Univ. in Oxford, OH, in 1852. He was admitted to the bar in 1854 and practiced in Indianapolis, IN. During the Civil War, he rose to the rank of brevet brigadier general and fought at Kennesaw Mountain, Peachtree Creek, Nashville, and in the Atlanta campaign. He lost the 1876 gubernatorial election in Indiana but succeeded in becoming a U.S. senator in 1881.

In 1888 he defeated Cleveland for president despite receiving fewer popular votes. As president, he expanded the pension list and signed the McKinley high tariff bill, the Sherman Antitrust Act, and the Sherman Silver Purchase Act. During his administration, six states were admitted to the Union. He was defeated for reelection in 1892. He died in Indianapolis, IN, on Mar. 13, 1901.

William McKinley (1897-1901), 25th president, Republican, was born on Jan. 29, 1843, in Niles, OH, the son of William and Nancy Allison McKinley. McKinley briefly attended Allegheny College in Pennsylvania. When the Civil War broke out in 1861, he enlisted and served for the duration. He rose to captain and in 1865 was made brevet major. After studying law in Albany, NY, he opened a law office in Canton, OH (1867). He served twice in the U.S. House (1877-83; 1885-91) and led the fight there for the McKinley Tariff, passed in 1890; he was not reelected to the House as a result. He served two terms (1892-96) as governor of Ohio.

In 1896 he was elected president as a proponent of a protective tariff and sound money (gold standard) over William Jennings Bryan, the Democrat and a proponent of free silver. McKinley was reluctant to intervene in Cuba, but the loss of the battleship *Maine* at Havana,

blamed on Spain, crystallized opinion. He demanded Spain's withdrawal from Cuba; Spain made some concessions, but Congress announced a state of war as of Apr. 21, 1898. He was reelected in the 1900 campaign, defeating Bryan's anti-imperialist arguments with the promise of a "full dinner pail." He was known for a conservative stance on business issues. On Sept. 6, 1901, at the Pan-American Exposition, in Buffalo, NY, he was shot by Leon Czolgosz, an anarchist. He died Sept. 14.

Theodore Roosevelt (1901-09), 26th president, Republican, was born on Oct. 27, 1858, in New York City, the son of Theodore and Martha Bulloch Roosevelt. He was a fifth cousin of Franklin D. Roosevelt and an uncle of Eleanor Roosevelt. Roosevelt graduated from Harvard Univ. in 1880. He attended Columbia Law School briefly but abandoned law to enter politics. He was elected to the New York State Assembly in 1881 and served until 1884. He spent the next two years ranching and hunting in the Dakota Territory. In 1886, he ran unsuccessfully for mayor of New York City. He was civil service commissioner in Washington, DC, from 1889 to 1895. From 1895 to 1897, he served as New York City's police commissioner. He was assistant secretary of the Navy under McKinley. The Spanish-

American War made him nationally known. He organized the First U.S. Volunteer Cavalry (Rough Riders) and, as lieutenant colonel, led the charge up Kettle Hill in San Juan, Cuba. Elected New York governor in 1898, he fought the spoils system and achieved taxation of corporation franchises.

Nominated for vice president in 1900, Roosevelt became the nation's youngest president at the age of 42 when McKinley was assassinated. He was reelected in 1904. As president he fought corruption of politics by big business, dissolved the Northern Securities Co. and others for violating antitrust laws, intervened in the 1902 coal strike on behalf of the public, obtained the Elkins Law (1903) forbidding rebates to favored corporations, and helped pass the Hepburn Railway Rate Act of 1906 (extending jurisdiction of the Interstate Commerce Commission). He helped obtain passage of the Pure Food and Drug Act (1906) and of employers' liability laws. Roosevelt vigorously organized conservation efforts. He mediated the peace between Japan and Russia in 1905, for which he won the Nobel Peace Prize. He abetted the 1903 revolution in Panama that led to U.S. acquisition of territory for the Panama Canal.

In 1908 Roosevelt obtained the nomination of William H. Taft, who was elected. Feeling that Taft had abandoned his policies, he unsuccessfully sought the nomination in 1912. He then ran on the Progressive "Bull Moose" ticket against Taft and Woodrow Wilson, splitting the Republicans and ensuring Wilson's election. During the campaign he was shot by a mentally deranged man but was not seriously wounded. In 1916, after unsuccessfully seeking the presidential nomination, he supported the Republican candidate, Charles E. Hughes. He strongly promoted U.S. intervention in World War I.

Roosevelt was a voracious reader and wrote some 40 books, including *The Winning of the West*. He died Jan. 6, 1919, at Sagamore Hill, his home in Oyster Bay, NY.

William Howard Taft (1909-13), 27th president, Republican, and 10th chief justice of the U.S., was born on Sept. 15, 1857, in Cincinnati, OH, the son of Alphonso and Louisa Maria Torrey Taft. His father was secretary of war and attorney general in Grant's cabinet and minister to Austria and Russia under Arthur. Taft graduated from Yale in 1878 and from Cincinnati Law School in 1880. After working as a law reporter for Cincinnati newspapers, he served as assistant prosecuting attorney (1881-82), assistant county solicitor (1885), superior court judge (1887), U.S. solicitor-general (1890), and federal circuit judge (1892). In 1900 he became head of the U.S. Philippines Commission and was the first civil governor of the Philippines (1901-04). In 1904 he served as secretary of war, and in 1906 he was sent to Cuba to help avert a threatened revolution.

Taft was groomed for the presidency by Theodore Roosevelt and elected over William Jennings Bryan in 1908. Taft vigorously continued Roosevelt's trust-busting, instituted the Dept. of Labor, and drafted amendments calling for direct election of senators and an income tax. However, his tariff and conservation policies angered progressives. Although renominated in 1912, he was opposed by

Roosevelt, who ran on the Progressive Party ticket; the result was Wilson's election.

Taft, with reservations, supported the League of Nations. He became a professor of constitutional law at Yale (1913-21) and was appointed by Pres. Harding to serve as chief justice of the U.S. (1921-30). Taft was the only person to have been both president and chief justice. He died in Washington, DC, on Mar. 8, 1930.

(Thomas) Woodrow Wilson (1913-21), 28th president, Democrat, was born on Dec. 28, 1856, in Staunton, VA, the son of Joseph Ruggles and Janet (Jessie) Woodrow Wilson. He grew up in Georgia and South Carolina. He attended Davidson College in North Carolina before graduating from Princeton Univ. in 1879. He studied law at the Univ. of Virginia and political science at Johns Hopkins Univ., where he received his PhD in 1886. He taught at Bryn Mawr (1885-88) and at Wesleyan (1888-90) before joining the faculty at Princeton. He was president of Princeton from 1902 until 1910, when he was elected governor of New Jersey. In 1912 he was nominated for president with the aid of William Jennings Bryan, who sought to block James "Champ" Clark and New York City's Democratic party machine Tammany Hall. Wilson won because Theodore Roosevelt,

running as a “Bull Moose” Progressive, siphoned votes away from Republican candidate Taft.

As president, Wilson protected American interests in revolutionary Mexico and fought for American rights on the high seas. He oversaw the creation of the Federal Reserve system, cut the tariff, and developed a reputation as a reformer. His sharp warnings to Germany led to the resignation of his secretary of state, Bryan, a pacifist. In 1916 he was reelected by a slim margin with the slogan “He kept us out of war,” although his attempts to mediate in the war failed. After several American ships were sunk by the Germans, he secured a declaration of war against Germany on Apr. 6, 1917.

Wilson outlined his peace program on Jan. 8, 1918, in the Fourteen Points, a state paper that enunciated a doctrine of self-determination for the settlement of territorial disputes. The Germans accepted his terms and an armistice on Nov. 11, 1918. Wilson went to Paris to help negotiate the peace treaty, the crux of which he considered the League of Nations. The Senate demanded reservations that would not make the U.S. subordinate to the votes of other nations in case of war. Wilson refused and toured the country to get support. After he suffered a severe stroke in Oct. 1919, his wife, Edith Wilson, concealed the extent of his infirmity, controlled access to him, and in effect largely acted in his place.

Wilson was awarded the 1919 Nobel Peace Prize, but the treaty embodying the League of Nations was ultimately rejected by the Senate in 1920. He left the White House in Mar. 1921. He died in Washington, DC, on Feb. 3, 1924.

Warren Gamaliel Harding (1921-23), 29th president, Republican, was born on Nov. 2, 1865, near Corsica (now Blooming Grove), OH, the son of George Tyron and Phoebe Elizabeth Dickerson Harding. He attended Ohio Central College, studied law, and became editor and publisher of a county newspaper. He entered the political arena as state senator (1901-04) and then served as lieutenant governor (1904-06). In 1910 he ran unsuccessfully for governor of Ohio; in 1914 he was elected to the U.S. Senate. In the Senate he voted for anti-strike legislation, women's suffrage, and the Volstead Prohibition Enforcement Act over Pres. Wilson's veto. He opposed the League of Nations.

In 1920 he was nominated for president and defeated James M. Cox in the election. The Republicans capitalized on war weariness and fear that Wilson's League of Nations would curtail U.S. sovereignty. Harding stressed a return to "normalcy" and worked for tariff revision and the repeal of excess profits law and high income taxes. In the so-called Teapot Dome scandal, his secretary of the interior, Albert B. Fall, resigned and was later convicted of accepting bribes in the leasing of government-owned oil reserves to private companies.

As rumors began to circulate about the corruption in his administration, Harding fell ill after a trip to Alaska, and he died suddenly of a likely heart attack in San Francisco on Aug. 2, 1923. Harding's letters to a longtime mistress were made public by the Library of Congress in 2014, and DNA evidence in 2015 confirmed another mistress's claim that he had fathered her daughter.

(John) Calvin Coolidge (1923-29), 30th president, Republican, was born on July 4, 1872, in Plymouth Notch, VT, the son of John Calvin and Victoria J. Moor Coolidge. Coolidge graduated from Amherst College in 1895. He entered Republican state politics and served as mayor of Northampton, MA, as state senator, as lieutenant governor, and, in 1919, as governor. In Sept. 1919, Coolidge attained national prominence by calling out the state guard in the Boston police strike. He declared, "There is no right to strike against the public safety by anybody, anywhere, anytime." This brought his name before the Republican convention of 1920, where he was nominated for vice president.

Coolidge succeeded to the presidency on Harding's death. As president, he opposed the League of Nations and the soldiers' bonus bill, which was passed over his veto. In 1924 he was elected to the

presidency by a huge majority. He substantially reduced the national debt. He twice vetoed legislation to aid financially hard-pressed farmers.

With Republicans eager to renominate him, Coolidge simply announced on Aug. 2, 1927, "I do not choose to run for president in 1928." He died in Northampton, MA, on Jan. 5, 1933.

Herbert Clark Hoover (1929-33), 31st president, Republican, was born on Aug. 10, 1874, in West Branch, IA, the son of Jesse Clark and Hulda Randall Minthorn Hoover. Hoover grew up in Indian Territory (now Oklahoma) and Oregon and graduated from Stanford Univ. with a degree in geology in 1895. He worked briefly with the U.S. Geological Survey and then managed mines in Australia, Asia, Europe, and Africa. While chief engineer of imperial mines in China, he directed food relief for victims of the Boxer Rebellion. He gained a reputation not only as an engineer but as a humanitarian as he directed the American Relief Committee, London (1914-15) and the U.S. Commission for Relief in Belgium (1915-19). He was U.S. Food Administrator (1917-19), American Relief Administrator (1918-23), and in charge of Russian Relief (1918-23). He served as secretary of commerce under both Harding and Coolidge.

In 1928 Hoover was elected president over Alfred E. Smith. In 1929 the stock market crashed, and the economy collapsed. During the Great Depression, Hoover inaugurated some government assistance programs, but he was opposed to administration of aid through a federal bureaucracy. As the effects of the Depression continued, he was defeated in the 1932 election by Franklin D. Roosevelt. Hoover remained active after leaving office. Pres. Truman named him coordinator of the European Food Program (1946) and chairman of the Commission on Organization of the Executive Branch (1947-49); he was later appointed by Pres. Eisenhower to serve in the same role (1953-55).

Hoover died in New York City on Oct. 20, 1964.

Franklin Delano Roosevelt (1933-45), 32nd president, Democrat, was born on Jan. 30, 1882, in Hyde Park, NY, the son of James and Sara Delano Roosevelt, and a fifth cousin of former Pres. Theodore Roosevelt. He graduated from Harvard Univ. in 1903. He attended Columbia University Law School without taking a degree and was admitted to the New York State bar in 1907. His political career began when he was elected to the New York State senate in

1910. In 1913 Pres. Wilson appointed him assistant secretary of the navy, a post he held during World War I.

In 1920 Roosevelt ran for vice president with James Cox and was defeated. From 1921 to 1928 he worked in his New York law office and was also vice president of a bank. In Aug. 1921, he was stricken with poliomyelitis, which left his legs paralyzed. As a result of therapy, he was able to stand and walk a few steps with the aid of leg braces.

Roosevelt served two terms as governor of New York (1929-33). In 1932, Democratic convention delegate W. G. McAdoo, pledged to nominee John N. Garner, threw his votes to Roosevelt, who was nominated for president. The Depression and the promise to repeal Prohibition ensured his election. He asked for emergency powers, proclaimed the New Deal, and put into effect a vast number of administrative changes. Foremost was the use of public funds for relief and public works, resulting in deficit financing. He greatly expanded the federal government's regulation of business and by an excess profits tax and progressive income taxes produced a redistribution of earnings on an unprecedented scale. He also promoted legislation establishing the Social Security system. He was the last president inaugurated on Mar. 4 (1933) and the first inaugurated on Jan. 20 (1937).

Roosevelt was the first president to use radio for "fireside chats." When the Supreme Court nullified some New Deal laws, he sought power to "pack" the Court with additional justices, but Congress refused to give him the authority. He was the first president to break the no-third-term tradition (1940) and was elected to a fourth term in 1944 despite failing health.

Roosevelt was openly hostile to fascist governments before World War II and launched a lend-lease program on behalf of the Allies. With British Prime Min. Winston Churchill he wrote a declaration of principles to be followed after Nazi defeat (the Atlantic Charter of Aug. 14, 1941) and urged the Four Freedoms (freedom of speech, of worship, from want, from fear) Jan. 6, 1941. After Japan attacked Pearl Harbor on Dec. 7, 1941, the U.S. entered the war. Roosevelt guided the nation through the war and conferred with

allied heads of state but did not live to see the end of the war. He died of a cerebral hemorrhage in Warm Springs, GA, on Apr. 12, 1945.

Harry S. Truman (1945-53), 33rd president, Democrat, was born on May 8, 1884, in Lamar, MO, the son of John Anderson and Martha Ellen Young Truman. Because of a family disagreement over what his middle name should be, he used only the initial S. After graduating from high school (1901) in Independence, MO, he worked in clerical jobs. He ran his family's farm from 1906 to 1917, then fought in France during World War I. Following the war he opened a haberdashery, served as a judge on the Jackson Co. Court (1922-24), and attended Kansas City School of Law (1923-25).

Truman was elected to the U.S. Senate in 1934 and reelected in 1940. Running with Roosevelt, he was elected vice president in 1944 and became president after Roosevelt's death in Apr. 1945. In 1948, in a famous upset, he defeated Republican Gov. Thomas E. Dewey (NY) to win a new term.

Truman authorized the first uses of the atomic bomb (Hiroshima and Nagasaki, Aug. 1945), bringing World War II to a rapid end. Under his leadership the U.S. provided postwar military and

economic aid to Greece and Turkey, threatened by Communist takeover (Truman Doctrine), financed economic recovery in Europe (Marshall Plan, 1948), and signed on to the NATO alliance against the Soviet Union in 1949. In 1948-49, he broke a Soviet blockade of West Berlin with a massive airlift. When Communist North Korea invaded South Korea (1950), he won UN approval to send in forces under Gen. Douglas MacArthur. When MacArthur opposed his policy of limited objectives, Truman removed him.

He died in Kansas City, MO, on Dec. 26, 1972.

Dwight David Eisenhower (1953-61), 34th president, Republican, was born on Oct. 14, 1890, in Denison, TX, the son of David Jacob and Ida Elizabeth Stover Eisenhower, as David Dwight Eisenhower. He grew up on a small farm in Abilene, KS, and graduated from West Point in 1915. He was on the staff of Gen. Douglas MacArthur in the Philippines from 1935 to 1939. In 1942, he was made commander of Allied forces landing in North Africa; the next year he became supreme Allied commander in Europe and led the Normandy invasion (June 6, 1944).

On May 7, 1945, Eisenhower received the surrender of Germany at Rheims, France. He returned to the U.S. to serve as chief of staff

(1945-48). His memoir, *Crusade in Europe* (1948), was a best-seller. In 1948 he became president of Columbia Univ.; in 1950 he became commander of NATO forces.

Eisenhower won the Republican nomination for president in 1952 and defeated Illinois Gov. Adlai E. Stevenson (D) in the 1952 and 1956 elections. As president he opposed wage and price controls, kept government out of labor disputes, reorganized the defense establishment, and promoted missile development. He helped negotiate a cease-fire truce in the Korean War, endorsed Taiwan and SE Asia defense treaties, advocated the “open skies” policy of mutual inspection with the USSR, and backed the UN in condemning the Anglo-French raid on Egypt, even as the CIA advanced regime change in Iran and Guatemala. He sent U.S. troops into Little Rock, AR, in Sept. 1957, to enforce school integration.

Eisenhower died on Mar. 28, 1969, in Washington, DC.

John Fitzgerald Kennedy (1961-63), 35th president, Democrat, was born on May 29, 1917, in Brookline, MA, the son of Rose Fitzgerald Kennedy and Joseph P. Kennedy, a wealthy businessman, investor, and onetime U.S. ambassador to Britain. After graduating from Harvard (1940), Kennedy served in the Navy

(1941-45), winning a medal for heroism as commander of a PT (patrol torpedo) boat in the Pacific. He served in the U.S. House, 1947-53, and was elected to the Senate in 1952 and 1958. In 1956, after spinal surgery, he published *Profiles in Courage*, which won a Pulitzer Prize.

In 1960, Kennedy narrowly defeated Vice Pres. Richard Nixon (R) for the presidency. He was the first Catholic and, at 43, the youngest person ever elected to that office. Despite his image of youth and vigor, Kennedy suffered from serious medical problems, including Addison's disease and severe back pain that required him to wear a back brace. The extent of these problems was concealed from the public, as were his frequent sexual liaisons.

In Apr. 1961, the new Kennedy administration was stung by the defeat of a CIA-directed invasion force of anti-Communist Cuban exiles, at Cuba's Bay of Pigs. But he successfully demanded, in Oct. 1962, that the Soviet Union dismantle its missile bases in Cuba. He also defied Soviet attempts to force the Allies out of Berlin. Kennedy established the Peace Corps and spurred on a program to land humans on the Moon, but Congress balked at some of his "New Frontier" initiatives, such as medical coverage for the aged. He eventually introduced major civil rights legislation but did not live to see it passed.

On Nov. 22, 1963, Kennedy was assassinated while riding in a motorcade in Dallas, TX. A commission chaired by Supreme Court Chief Justice Earl Warren concluded in Sept. 1964 that the sole assassin had been Lee Harvey Oswald, an ex-Marine and ardent Marxist. Oswald was captured shortly after the assassination but was shot dead by nightclub owner Jack Ruby while being moved to a county jail.

Lyndon Baines Johnson (1963-69), 36th president, Democrat, was born on Aug. 27, 1908, near Stonewall, TX, the son of Rebekah Baines Johnson and Sam Ealy Johnson, a state legislator. He graduated from Southwest Texas State Teachers College in 1930, with formative experience as a student teacher of underprivileged Mexican-American students in a segregated school, and briefly attended Georgetown Univ. Law School. He served as secretary to a congressman and in 1935 became director of the Texas branch of the New Deal National Youth Administration. In 1937 he won an election to fill a vacancy in Congress; he was subsequently elected to five full terms. During 1941-42 he also served in the Navy.

Johnson won a U.S. Senate seat after a close 1948 primary widely regarded as marred by fraud. After reelection in 1954, he served as a skillful Senate majority leader. Elected vice president in 1960 on the ticket headed by Sen. John Kennedy, he succeeded to the presidency when Kennedy was assassinated. He was elected to a full term in 1964, defeating Sen. Barry Goldwater (R, AZ) in a landslide.

As president Johnson won passage of landmark civil rights, anti-poverty, education (Head Start), and health care (Medicare,

Medicaid) legislation—the “Great Society” program. However, in the face of objections to his escalation of the Vietnam war, he declined to seek another term. Johnson died on Jan. 22, 1973, at his ranch in Stonewall, TX.

Richard Milhous Nixon (1969-74), 37th president, Republican, was born on Jan. 9, 1913, in Yorba Linda, CA, the son of Francis Anthony and Hannah Milhous Nixon. He graduated from Whittier College in 1934 and from Duke Univ. Law School in 1937. After practicing law and working in the Office of Price Administration he joined the Navy, serving in the Pacific. Elected to the U.S. House in 1946 and 1948, he played a central role in spearheading the prosecution of suspected Communist spy Alger Hiss. Nixon was elected to the Senate in 1950 and served as vice president under Dwight Eisenhower (1953-61). He first ran for president in 1960, narrowly losing to John F. Kennedy, and ran unsuccessfully for governor of California in 1962. In 1968 he was elected president, defeating Vice Pres. Hubert Humphrey (D).

As president, Nixon appointed four Supreme Court justices, including the chief justice, moving the court to the right. He sought to shift greater responsibility to state and local governments, while also supporting broad federal initiatives such as creation of the Office of Management and Budget and the Environmental Protection Agency. The economy suffered periods of high unemployment and inflation, and he imposed wage and price controls in 1971.

In foreign affairs, Nixon dramatically altered relations with China, which he visited in 1972—the first U.S. president to do so. With adviser Henry Kissinger, he pursued détente with the Soviet Union, signing major arms limitation treaties and increasing trade. While beginning a gradual withdrawal from Vietnam, he ordered an incursion into Cambodia (1970) and the bombing of Hanoi and mining of Haiphong Harbor (1972). Reelected by a large majority in Nov. 1972, he secured a Vietnam cease-fire in Jan. 1973.

Nixon's second term was cut short by scandal, after disclosures relating to a June 1972 burglary of Democratic Party headquarters in the Watergate office complex. The courts and Congress sought tapes of Nixon's office conversations; Nixon claimed executive privilege, but the Supreme Court ruled against him. In July 1974, the House Judiciary Committee recommended adoption of impeachment articles charging obstruction of justice, abuse of power, and contempt of Congress. On Aug. 5, he released transcripts of conversations that linked him to cover-up activities. Nixon resigned on Aug. 9, becoming the first president ever to do so.

In later years, Nixon emerged as an elder statesman. He died Apr. 22, 1994, in New York City.

Gerald Rudolph Ford (1974-77), 38th president, Republican, was born on July 14, 1913, in Omaha, NE, the son of Leslie and Dorothy Gardner King, and was named Leslie Lynch King Jr. His parents divorced in Dec. 1913, and in 1917 his mother married Grand Rapids, MI, businessman Gerald R. Ford, whose name the future president ultimately took. He graduated from Univ. of Michigan in 1935 and Yale Law School in 1941. In 1942, he joined the Navy, serving in the Pacific. He won election in 1948 to the U.S. House, where he served for 25 years, eight of them as Republican leader.

On Oct. 12, 1973, after Vice Pres. Spiro Agnew resigned in a corruption scandal, Pres. Nixon nominated Ford to replace him, in the first use of procedures set out in the 25th Amendment (ratified 1967). When Nixon resigned, in Aug. 1974, Ford succeeded him; he was the only president never elected either to the presidency or to the vice presidency.

Ford was widely credited with helping rebuild morale after the Nixon presidency, though his pardoning of Nixon for any federal crimes in office was controversial. He vetoed 48 bills in his first 21 months in office, mostly in the interest of fighting high inflation; he was less successful in curbing high unemployment. Ford was narrowly defeated in the 1976 election. He died Dec. 26, 2006, at home in Rancho Mirage, CA.

James Earl (Jimmy) Carter (1977-81), 39th president, Democrat, was the first president from the Deep South since before the Civil War. He was born on Oct. 1, 1924, in Plains, GA, the son of James and Lillian Gordy Carter. Carter graduated from the U.S. Naval Academy in 1946 and in 1952 entered the Navy's nuclear submarine program as an aide to Capt. (later Adm.) Hyman Rickover. Carter left the Navy to take over the family peanut farming businesses after his father's death in 1953. He served in the Georgia state senate (1963-67) and as governor of Georgia (1971-75). In 1976, he won the Democratic presidential nomination and defeated Pres. Gerald Ford to win the presidency.

On taking office, Carter pardoned Vietnam draft evaders. He played a major role in negotiations leading to the 1979 peace treaty between Israel and Egypt and reached treaties with Panama ending U.S. control of the Panama Canal, effective in 2000. Carter was widely blamed, however, for the poor state of the economy and viewed by some as weak in handling foreign policy. In Nov. 1979, Iranian student militants attacked the U.S. embassy in Tehran and held 52 members of the embassy staff as hostages; efforts to obtain their release became a major preoccupation of the administration. He responded to the Soviet invasion of Afghanistan (Dec. 1979) by

imposing a grain embargo and boycotting the 1980 Moscow Olympics.

Carter was defeated by Ronald Reagan in the 1980 election. The hostages in Iran were finally released on inauguration day, 1981, just after Reagan officially became president. After leaving office, Carter played an active role in diplomatic and humanitarian efforts around the world, especially through the Carter Center, which he founded with his wife, Rosalynn, in 1982. He was awarded the Nobel Peace Prize in 2002.

Ronald Wilson Reagan (1981-89), 40th president, Republican, was born on Feb. 6, 1911, in Tampico, IL, the son of John Edward and Nellie Wilson Reagan. After graduating from Eureka College, he worked as a sports announcer in Des Moines, IA. In 1937 he began a career as a Hollywood movie actor. He served in the Army Air Force during World War II, making training films, and after the war became president of the Screen Actors Guild. Reagan served two terms as California governor (1967-75). He won a landslide victory in the 1980 presidential election and was reelected in 1984. He was shot and seriously wounded in an assassination attempt in 1981.

As president Reagan forged a bipartisan coalition in Congress, which led to enactment of large-scale tax cuts, cutbacks in government programs, and a major increase in defense spending. In 1982, the U.S. joined in maintaining a peacekeeping force in Beirut, Lebanon; the next year Reagan sent a task force to invade Grenada after two Marxist coups on the island. Reagan ordered airstrikes on Libyan military installations in 1986, after Libyan agents bombed a nightclub in West Berlin, Germany.

Reagan held four summit meetings with Soviet leader Mikhail Gorbachev and signed a major arms-reduction treaty with the Soviet Union in 1987. He also strongly supported anti-Communist governments and forces around the world. In 1986, it was revealed that the U.S. had secretly sold weapons to Iran in exchange for the release of U.S. hostages held in Lebanon and that some of the proceeds had been illegally diverted to anti-Communist contras in Nicaragua. The scandal led to the resignation of leading White House aides, but no proof was found that Reagan himself was involved. As Reagan left office the nation was experiencing its sixth consecutive year of GDP growth, though also piling up large budget deficits.

In 1994, Reagan revealed that he was suffering from Alzheimer's disease. He died on June 5, 2004, in Los Angeles, CA, from complications of the disease.

George Herbert Walker Bush (1989-93), 41st president, Republican, was born June 12, 1924, in Milton, MA, the son of U.S. Sen. Prescott Bush (R, CT, 1952-63) and Dorothy Walker Bush. He was shot down over the Pacific as a Navy pilot in World War II and was awarded the Distinguished Flying Cross. After graduating from Yale Univ. in 1948, he settled in Texas, where he helped found an oil company.

He lost a 1964 U.S. Senate race but was elected to two U.S. House terms, in 1966 and 1968. After losing a second Senate race, he served as U.S. ambassador to the UN, head of the U.S. Liaison Office in Beijing, and director of the CIA. Following an unsuccessful bid for the 1980 GOP presidential nomination, Bush became Ronald Reagan's running mate, and served two terms as vice president (1981-89).

In 1988, Bush defeated Gov. Michael Dukakis (D, MA) to win the presidency. He faced severe budget deficits, struggled with military cutbacks, and vetoed abortion-rights legislation. In 1990 he agreed to a deficit-reduction plan that included tax hikes, despite a campaign promise to the contrary. He successfully appointed two justices to the U.S. Supreme Court, David Souter and Clarence

Thomas; the latter was confirmed after 1991 hearings in which he was accused of sexual harassment.

Abroad, Bush supported Soviet reforms, Eastern Europe democratization, and good relations with Beijing. In Dec. 1989, he sent troops to Panama, where they overthrew the government and captured dictator Manuel Noriega. Reacting to Iraq's Aug. 1990 invasion of Kuwait, Bush assembled a broad U.S.-led, UN-backed Allied force which retook Kuwait (Feb. 1991) after a month-long air war and four-day ground assault. But the coalition did not seek to drive Iraqi leader Saddam Hussein from power. The quick victory, with extremely light U.S. casualties, gave Bush then-record-high approval ratings, but his popularity plummeted as the economy slipped into recession. He was defeated by Bill Clinton in the 1992 election.

Bush saw his son George W. Bush inaugurated as the 43rd president in 2001. He died Nov. 30, 2018, at home in Houston, TX.

William Jefferson (Bill) Clinton (1993-2001), 42nd president, Democrat, was born Aug. 19, 1946, in Hope, AR, son of William Blythe and Virginia Cassidy Blythe, and was named William Jefferson Blythe IV. Blythe died in an auto accident before his son

was born; his widow married Roger Clinton, whose last name Bill Clinton took. Clinton earned his undergraduate degree from Georgetown Univ. in 1968. While attending Oxford Univ. as a Rhodes scholar, he legally avoided the draft, according to some critics by misleading his draft board. Clinton worked on George McGovern's 1972 presidential campaign and earned a degree from Yale Law School in 1973. He taught at the Univ. of Arkansas law school until 1976, when he was elected state attorney general. In 1978 he was elected governor, becoming the nation's youngest at the time. Though defeated for reelection in 1980, he was returned to office several times thereafter. He married law school classmate Hillary Rodham in 1975; their daughter Chelsea was born in 1980.

Positioning himself as a centrist "New Democrat" in a crowded field, Clinton won the party's 1992 presidential nomination and was elected president, defeating Pres. George H. W. Bush and independent Ross Perot. In 1993, he won passage of a deficit reduction measure and congressional approval of the North American Free Trade Agreement. In 1994 he won passage of a stringent anti-crime bill, which became controversial over time. A plan for major health care reform legislation died in Congress. The administration did not intervene in 1994 as a massive genocide was committed in Rwanda. In 1995 Clinton sent troops to Bosnia to help implement a peace settlement there.

Buoyed by a strong economy, Clinton easily won reelection in 1996. He achieved federal budget surpluses in several years. Clinton was cleared of involvement in improprieties by associates in the Whitewater land-development venture, but investigation into the matter turned up evidence of a sexual relationship between Clinton and a White House intern. In 1998, he was impeached by the House, charged with perjury and obstruction of justice in an attempted cover-up of the affair. He was acquitted in a Senate trial, but in a separate proceeding agreed to certain penalties. In 1999 the U.S. joined other NATO nations in an aerial bombing campaign that induced Serbia to withdraw troops from Kosovo, where they had been terrorizing ethnic Albanians.

After leaving office, Clinton actively supported his wife's political career. He also founded what became the Bill, Hillary and Chelsea Clinton Foundation.

George Walker Bush (2001-09), 43rd president, Republican, was born on July 6, 1946, in New Haven, CT. He was the oldest of six children born to the 41st president, George Herbert Walker Bush, and the former Barbara Pierce. He became the first son of a former president to take office as president since John Quincy Adams in 1825.

Bush grew up in Midland and Houston, TX. He attended Phillips Academy in Andover, MA, and graduated from Yale Univ. in 1968. After serving with the Texas Air National Guard and earning an MBA from Harvard, he returned to Midland, where he went into the oil business. In 1977 he married Laura Welch, a librarian; they had twin daughters, Barbara and Jenna, in 1981. After aiding his father's winning 1988 presidential campaign, he became managing partner of the Texas Rangers baseball team. He was elected governor of Texas in 1994 and reelected in 1998. In 2000, Bush and running mate Dick Cheney defeated the Democratic ticket led by Vice Pres. Al Gore, in one of the closest-ever U.S. presidential elections. The

result was not settled until a mid-Dec. Supreme Court ruling left Florida's crucial electoral votes in Bush's column.

Pres. Bush called his governing philosophy "compassionate conservatism." During his first term he won passage of two major tax cuts, the No Child Left Behind education bill, and a Medicare reform bill addressing prescription drug coverage, and he pioneered a major U.S. initiative to fight the AIDS epidemic, especially targeting Africa.

But Bush's first term was dominated by the Sept. 11, 2001, terrorist attack on the U.S. and the nation's response. In Oct. 2001, he signed the controversial USA Patriot Act, greatly expanding surveillance powers of the federal government, and created what became the U.S. Dept. of Homeland Security. Abroad, the U.S. military, aided by allies, deposed Afghanistan's Taliban regime, which was sheltering al-Qaeda terrorists. A new government that restored liberties but was condemned for corruption sought to hold off Taliban insurgents, with U.S. aid. Meanwhile, an operation to capture al-Qaeda leader Osama bin Laden, architect of the Sept. 11 attack, failed when he escaped to Pakistan. In 2003 the U.S., aided mainly by UK forces, launched an air and ground war against Iraq and deposed its autocratic leader, Saddam Hussein. However, no evidence was found that Hussein's regime had developed weapons of mass destruction, the key rationale for the war. A new Iraqi government was formed in June 2004, but insurgent violence and U.S. troop casualties continued.

Reelected in 2004, Bush pressed unsuccessfully for Social Security and immigration reforms, and his administration drew criticism for its response to Hurricane Katrina in 2005. He won Senate confirmation for John Roberts (2005) as Supreme Court chief justice and Samuel Alito (2006) as associate justice. After Democrats won majorities in 2006 midterm elections, Bush accepted the resignation of Defense Sec. Donald Rumsfeld, a target of widespread criticism over the Iraq war. Two months later, Bush announced a "surge" in U.S. troop strength in Iraq; a sharp drop in casualties ensued, aided by a shift in alliances. In 2008, the administration reached an agreement with Iraq allowing U.S. troops to remain there through 2011. But the Taliban was gaining strength in

Afghanistan, and the Bush administration was damaged by revelations of prisoner abuse and extreme interrogation methods.

The U.S. economy fell into recession in Dec. 2007; Bush and congressional leaders responded with a \$168-bil stimulus plan. Problems in home finance and credit markets triggered a deep economic crisis by Sept. 2008. The Treasury Dept. bailed out mortgage finance firms Fannie Mae and Freddie Mac, investment bank Lehman Bros. filed for bankruptcy, and the Federal Reserve rescued insurance giant AIG with a line of credit reaching \$144 bil. An administration-backed plan to buy up to \$700 bil in devalued mortgage-related assets cleared Congress in Oct., after a severe stock market plunge bolstered support.

In retirement Bush published a memoir, a biography of his father, and two books featuring his own paintings of U.S. war veterans and immigrants. He did not vote for GOP nominee Donald Trump in 2016 or 2020.

Barack Hussein Obama (2009-17), 44th president, Democrat, was born Aug. 4, 1961, in Honolulu, HI, son of Barack Obama Sr., a Black Kenyan, and Stanley Ann Dunham, a white American. They divorced, and after his mother remarried, he lived in Indonesia with

his mother and stepfather; he also lived for a time with his maternal grandparents in Hawaii, where he attended high school. Obama graduated from Columbia Univ. (1983) and, after working as a community organizer in Chicago, earned a law degree from Harvard Univ. (1991). He practiced civil rights law in Chicago and taught at the Univ. of Chicago Law School. In 1992, he married attorney Michelle Robinson; they have two daughters, Malia (b. 1998) and Sasha (b. 2001).

Obama served eight years (1997-2004) in the Illinois state senate. He wrote a 1995 memoir, *Dreams From My Father*, and gave the keynote address at the 2004 Democratic National Convention. Elected to the U.S. Senate that year, he won the Democratic nomination for president in 2008, stressing opposition to the Iraq war and a message of “hope and change,” and was elected the nation’s first Black president.

Awarded the 2009 Nobel Peace Prize, Pres. Obama gradually pulled U.S. troops from Iraq, though U.S. forces were reintroduced in noncombat roles as sectarian strife heightened. With Taliban gaining ground in Afghanistan, he authorized a surge in U.S. forces there, aimed at creating conditions for a handover to the Afghan government; he also stepped up drone strikes against Islamist militants abroad. In May 2011, al-Qaeda leader Osama bin Laden was killed in a U.S. raid on his hideout in Pakistan. Soon after, Obama began reducing U.S. forces in Afghanistan. The U.S. joined in NATO airstrikes leading to the overthrow of Libyan dictator Muammar al-Qaddafi, but rival militias refused to disarm and U.S. personnel were killed in a 2012 attack by Islamist radicals on a U.S. consulate in Benghazi.

The administration won passage of a \$787-bil economic stimulus package early in 2009, and the U.S. pulled out of recession, though growth was modest. In Mar. 2010, Obama won passage of his signature health care reform bill (“Obamacare”). Democrats lost their House majority in Nov. 2010 elections, limiting Obama’s legislative agenda. In 2012, he signed an executive order suspending deportations for most young undocumented immigrants (“dreamers”) who came to the U.S. as children. Among other initiatives, his

administration finalized regulations tightening fuel emission standards for motor vehicles. After Obama was reelected in Nov. 2012, a compromise in Congress averted a year-end “fiscal cliff” by making expiring G.W. Bush-era tax cuts permanent for most people. Battles over the federal budget, debt ceiling, and Obamacare funding continued.

Abroad, Russian forces annexed Crimea in 2014 and lent support to pro-Russian separatists in eastern Ukraine; Obama joined Europe in imposing economic sanctions. He called for an end to the repressive regime of Syria’s Bashar al-Assad, but when Assad’s forces apparently launched a chemical weapons attack on civilians, crossing what Obama had called a “red line,” he agreed to a Russian-brokered disarmament pact with the regime. After the Sunni militant group Islamic State in Iraq and Syria (ISIS) took over large areas of both countries, proclaiming an Islamic “caliphate” in June 2014 and terrorizing dissenters and religious minorities, Obama sent military advisers. He also authorized U.S. airstrikes against ISIS and eventually provided arms to Syrian rebels.

After 2014 midterm elections, which left Republicans controlling both houses of Congress, Obama issued an executive order expanding protection of undocumented immigrants from deportation, but it was blocked in court. His administration introduced a plan to reduce carbon pollution from power plants and he signed onto the Paris Agreement aimed at global reductions in greenhouse gas emissions. The administration also restored relations with Cuba and entered a multination accord with Iran intended to curb Iranian nuclear weapons development for a time, in return for ending economic sanctions. In Dec. 2014, Obama declared an end to U.S. combat in Afghanistan, limiting U.S. forces to a support role, but he dropped plans for a full withdrawal, leaving some 10,000 troops there when he left office.

Responding to a 2012 mass shooting at Sandy Hook Elementary School in Newtown, CT, Obama called unsuccessfully for federal gun control legislation. He also confronted racial violence (as in the 2015 massacre at a Black church in Charleston, SC) and racial tensions over the deaths of Black people in encounters with police (as in

Ferguson, MO, 2014). After the death of Supreme Court Justice Antonin Scalia in early 2016, Senate Republicans refused to hold a confirmation hearing for Obama's nominee to replace him, contending it was too near the presidential election.

The first volume of Obama's two-part memoir was published in 2020. The Chicago-based Obama Foundation, founded in 2014, was overseeing creation of the Obama Presidential Center in Chicago.

Donald John Trump (2017-21), 45th president, Republican, was born June 14, 1946, in Queens, NY, the son of Frederick C. Trump, a wealthy real estate developer, and Mary Anne MacLeod Trump, a Scottish immigrant. From age 13 he attended a military boarding school. After earning a bachelor's degree from the Wharton School (1968), he joined the family real estate business. Trump spearheaded an expansion of New York City holdings and developed casinos in Atlantic City, NJ, though those eventually failed. He coauthored business-advice books, hosted two reality TV series (2008-15), and licensed his name to enterprises around the world. Trump's net worth in mid-2022 was estimated by *Forbes* at \$3 bil.

After two marriages that ended in divorce, Trump married Melania Knauss in 2005. Their son, Barron, was born in 2006. He also had two sons, Donald Jr. (b. 1977) and Eric (b. 1984), and a daughter, Ivanka (b. 1981), from his first marriage, and a daughter, Tiffany (b. 1993), from his second. As president he surrendered control, but not ownership, of the Trump Organization to his elder sons.

In his 2015-16 campaign for the presidency, Trump portrayed himself as an outsider who would “make America great again.” His often provocative rhetoric at rallies and in tweets—which he continued in the White House—energized supporters, and he won nomination over a crowded field. Accusations of sexual misconduct and evidence of his crude remarks about women dogged but did not derail his fall campaign. He defeated former Sec. of State Hillary Clinton (D), though she received more popular votes.

Promptly after inauguration, Pres. Trump issued executive orders to ban immigration from seven Muslim-majority nations (upheld by the Supreme Court as later modified) and plan for a wall along the U.S.-Mexican border. His administration instituted a “remain in Mexico” policy for migrants awaiting U.S. asylum (ended under Pres. Biden after legal battle), and sought unsuccessfully to end the Obama-era DACA program, which temporarily protected many undocumented immigrants who had arrived in the U.S. as minors. Reports of inhumane conditions at migrant detention centers, and of children separated from parents, generated much criticism. Trump was also denounced when he appeared to blame “both sides” for violence at a white nationalist rally in Charlottesville, VA, in 2017.

In 2017, Trump controversially fired FBI director James Comey, who had led a probe into Russian interference in the 2016 presidential election; former FBI director Robert Mueller was appointed as special counsel to oversee the probe. The Mueller report, released Mar. 2019, found there had been Russian interference and possible obstruction of justice by Trump but did not take a position on charging him with a crime.

Abroad, Trump cultivated ties with Russian Pres. Vladimir Putin, met cordially with North Korean leader Kim Jong Un, and intensified

U.S. support for Israel. In 2018 he announced U.S. withdrawal from a 2015 multinational nuclear deal with Iran; as a counterweight to Iran, the U.S. aided Saudi Arabia in its intervention in the Yemen civil war. The administration in 2019 announced a troop withdrawal from N Syria, where U.S. Kurdish allies were threatened by ISIS. In Feb. 2020, the U.S. signed an accord with the Taliban, providing for a phased U.S. withdrawal from Afghanistan, to be completed by May 2021, along with separate intra-Afghan talks, which failed; release of imprisoned Taliban; and a Taliban pledge not to allow threats to security of the U.S. and its allies.

In Dec. 2017 Trump signed a measure lowering income tax rates; in early 2018 he reluctantly signed a federal budget bill, negotiated with Democrats, that set high spending levels and raised the debt ceiling. Support for Trump's impeachment grew after allegations that he had pressured Ukraine to investigate former Vice Pres. Joe Biden and his son, Hunter Biden, by withholding military aid. After congressional hearings at which officials alleged an illicit quid pro quo, the full House, with no Republican support, passed two articles of impeachment, which failed in the Senate.

During Trump's first three years in office the unemployment rate hit historically low levels, but the trend was reversed by the COVID-19 pandemic, which had a profound impact on the economy. The administration limited travel from China, and later from Europe, as health systems were overwhelmed and resources for testing and tracing were limited. Trump created a coronavirus task force and promoted successful efforts to develop vaccines, but he often downplayed the role of preventive measures and was accused of spreading misinformation.

The death in May 2020 of a Black man, George Floyd, caused by a white Minneapolis police officer, gave rise to widespread protests against systemic racism and police brutality. Trump disputed or downplayed protesters' grievances, while citing instances of looting and arson.

The Trump administration halted or reversed many environmental regulations and withdrew from the Paris Agreement on climate change. Trump also appointed many conservative-leaning judges to

federal courts, including Neil Gorsuch (2017), Brett Kavanaugh (2018), and Amy Coney Barrett (2020) to the Supreme Court.

Former Vice Pres. Biden defeated Trump in Nov. 2020 by an Electoral College vote of 306-232, but Trump claimed victory, despite the dismissal of his suits challenging state vote counts. On Jan. 6, 2021, energized by a Trump rally, a mob invaded the Capitol, in an unsuccessful attempt to intimidate Vice Pres. Mike Pence and Congress into rejecting the presidential election certification. The House voted Jan. 13, 2021, to impeach Trump for “incitement to insurrection”; the Senate vote to convict him, Feb. 13, 2021, was 57-43, falling short of the needed two-thirds majority.

Out of office, Trump led rallies and endorsed candidates who echoed his unsupported claims of election fraud. There were ongoing probes into his business dealings and actions as president. A House select committee investigating the Jan. 6, 2021, attack on the Capitol charged he had ignored close advisers who warned his claims of election fraud were baseless, pressured officials to put forward fake electors, and spurred the Capitol attack. In Aug. 2022, the FBI removed White House files held at his Florida estate, using a warrant that cited possible criminal violations.

Joseph Robinette Biden Jr. (2021-), 46th president, Democrat, was born Nov. 20, 1942, in Scranton, PA, the oldest of four children in a middle-class Irish Catholic family. His parents were Joseph Robinette Biden Sr., a businessman, and Catherine Eugenia Finnegan Biden. He graduated from the Univ. of Delaware (1965) and earned a law degree from Syracuse Univ. (1968). He worked as public defender in Wilmington, DE, where he also served on the New Castle County Council, and he upset the Republican incumbent to win a U.S. Senate seat from Delaware in Nov. 1972. The next month, his wife, Neilia Hunter Biden (m. 1966), and infant daughter Naomi were killed in a car crash, and their sons Beau (b. 1969) and Hunter (b. 1970) were seriously injured. Five years later he married Jill Tracy Jacobs, an English teacher; they had a daughter, Ashley (b. 1981).

Biden won reelection to the Senate six times. He famously commuted regularly from Delaware to DC. As chair of the Judiciary Committee he presided over contentious Supreme Court nomination hearings that ended in the defeat of Robert Bork's nomination (1987) and in Clarence Thomas's confirmation (1991). He was known for often working with Republicans on legislation.

In 1987, Biden ran for the 1988 Democratic presidential nomination but withdrew, damaged by charges of plagiarism in a speech. He dropped out of the 2008 nomination battle after the Iowa caucus, but Obama selected him as his running mate.

As vice president, Biden worked closely with Obama, serving as his liaison to Congress. Biden decided against a 2016 run for president, citing bereavement over the recent death of his son, Beau, but in 2020 he won the nomination, over a wide field of rivals, and defeated incumbent Pres. Trump in Nov. Biden was only the second Roman Catholic to become president, and he was the oldest person to be sworn in as president.

In office, Biden signed executive orders that reversed Trump administration policies on immigration, the environment (reinstating U.S. adherence to the 2016 Paris Agreement on climate change goals), and other issues. With a tie-breaking vote in the Senate by Vice Pres. Kamala Harris, he gained passage of a \$1.9-tril COVID

relief bill, opposed by Republicans as inflationary. A scaled-back bipartisan \$1.2-tril infrastructure bill also passed, after progressives dropped demands that it be accompanied by a bigger spending bill. In Aug. 2022, Biden signed a major health, tax, and clean energy bill, passed in a party line vote after long negotiations.

The administration expanded COVID vaccine supply and access, but new variants, vaccination resistance, and controversy or confusion over other preventive measures contributed to persistence of the pandemic, which by mid-2022 had killed more than a million Americans.

Shortly after mass shootings in a Buffalo, NY, grocery store and an Uvalde, TX, elementary school, Pres. Biden in June 2022 signed a bipartisan federal gun control measure—the first in decades—though it fell short of his objectives. He condemned a series of Supreme Court rulings decided by a conservative majority, including one striking down a New York state law that had banned carrying handguns in public. He also called the landmark decision in June 2022 that ruled that abortion was not a constitutional right—reversing *Roe v. Wade* and returning abortion regulation to the states—a “tragic error.” Biden’s successful nomination of Judge Ketanji Brown Jackson, as the first Black female Supreme Court justice, did not change the Court’s ideological composition going forward.

Abroad, Biden sought to revive a 2015 nuclear deal with Iran. He declared an end to U.S. support for a Saudi-led bombing campaign against Iranian-backed rebels in Yemen, but by mid-2022 he was seeking to repair ties with Saudi Arabia, despite human rights concerns, and he met with the Saudi crown prince partly to attempt to persuade the Saudis to increase oil production.

Biden kept to a U.S. commitment to total U.S. troop withdrawal from the long war in Afghanistan, adopting Aug. 31, 2021, as a deferred but fixed deadline, despite rapid Taliban advances as the Afghan government collapsed. Amid chaos at the Kabul airport, heightened by a terrorist bombing, over 120,000 people were evacuated, but many Afghans who had helped the U.S. were left behind. In Aug. 2022, al-Qaeda leader Ayman al-Zawahiri,

apparently sheltered by Taliban, was located by U.S. intelligence and killed by a drone strike.

Under Biden the U.S. officially ended its combat role in Iraq, with troops remaining in noncombat roles.

In Feb. 2022 Russia launched a massive invasion of Ukraine. Biden had already vowed not to send in troops to defend Ukraine, but he rallied NATO support for imposing economic sanctions on Russia and sent financial aid and weaponry to assist in Ukraine's defense, as the war dragged on, with massive effects on the world economy and U.S.-Russian relations.

U.S.-China relations grew more tense after a visit to Taiwan by U.S. House Speaker Nancy Pelosi and a decision by the Biden administration to seek congressional authorization for over \$1 bil in new arms sales to Taiwan.

In Aug. 2022 Biden issued an order canceling up to \$20,000 in student loan debt. The administration saw strong job growth through mid-2022 but had to contend with historically high inflation and gas prices, along with possible recession.

Presidential Rankings, 2021

Source: C-SPAN

As assessed by historians and other professional observers of the presidency, 142 of whom participated in the 2021 survey. Participants rated each president on 10 qualities of presidential leadership; rankings here reflect overall score.

2021 rank	President	2017 rank	2009 rank	2000 rank
1.	Abraham Lincoln	1	1	1
2.	George Washington	2	2	3
3.	Franklin D. Roosevelt	3	3	2
4.	Theodore Roosevelt	4	4	4
5.	Dwight D. Eisenhower	5	8	9

Presidents who lost the popular vote while winning election:

John Quincy Adams, in 1824 (elected by the House after general election failed to produce a majority); Rutherford B. Hayes, in 1876; Benjamin Harrison, in 1888; George W. Bush, in 2000; Donald J. Trump, in 2016. (Popular vote totals before 1824 are unknown.)

Only presidents chosen by the House of Representatives:

Thomas Jefferson (1st term) and John Quincy Adams

Only president never elected either president or vice

president: Gerald Ford; named vice president when Spiro Agnew resigned (1973), became president when Nixon resigned (1974)

Only president who never previously held government or military office: Donald J. Trump

Left-handed presidents: James Garfield, Herbert Hoover, Harry Truman, Gerald Ford, Ronald Reagan, George H. W. Bush, Bill Clinton, and Barack Obama

First Catholic president: John F. Kennedy; the most common religious affiliations have been Episcopalian (11) and Presbyterian (9)

Only bachelor presidents: James Buchanan, who never married, and Grover Cleveland, who married Frances Folsom in the White House in 1886

First divorced president: Ronald Reagan; divorced from Jane Wyman in 1948, married Nancy Davis in 1952

Presidents who died on July 4: John Adams and Thomas Jefferson (both 1826) and James Monroe (1831)

First Lady Jill Biden

Jill Biden was born June 3, 1951, in Hammonton, NJ. She graduated from Univ. of Delaware (1975) and had a career as an educator, while earning advanced degrees that ultimately included a doctorate in educational leadership (2007). After an early marriage ended in divorce she married then-Sen. Joe Biden, a widower, in 1977, becoming stepmother to his two sons, Beau and Hunter. The Bidens' daughter, Ashley, was born in 1981. After Biden took office in 2021, she balanced her career as a professor of writing with her role as first lady, in which she promoted community college education, support for military families, cancer research, and COVID vaccination. In May 2022 she met with Ukrainian refugees and visited Ukraine itself, where she met with Ukraine's first lady.

Spouses and Children of the Presidents

Name (born-died; married)	Birthplace	Sons/ daughters
Martha Dandridge Custis Washington (1731-1802; 1759)	VA	None

Eleanor Rosalynn Smith Carter (1927- ; 1946)	GA	3/1
Anne Frances (Nancy) Robbins Davis Reagan (1921-2016; 1952)	NY	1/1 ³
Barbara Pierce Bush (1925-2018; 1945)	NY	4/2
Hillary Diane Rodham Clinton (1947- ; 1975)	IL	0/1
Laura Lane Welch Bush (1946- ; 1977)	TX	0/2
Michelle LaVaughn Robinson Obama (1964- ; 1992)	IL	0/2

Melania Knauss Trump (1970- ; 2005)	Slovenia	1/0 ⁴
Jill Tracy Jacobs Biden (1951- ; 1977)	NJ	0/1 ⁵

Note: Pres. Buchanan was unmarried. Children not born to the marriages shown are not listed unless otherwise noted. (1) Born in London, father a MD citizen. (2) Adopted son. (3) Pres. Reagan's first wife, whom he later divorced, was Jane Wyman (m. 1940-48). They had two daughters, one of whom died in infancy, and an adopted son. (4) Pres. Trump had four children from two previous marriages: two sons (Donald Jr., Eric) and one daughter (Ivanka) with Ivana Marie Zelníková Trump (m. 1977-92) and one daughter (Tiffany) with Marla Maples (m. 1993-99). (5) Pres. Biden also had two sons (Beau and Hunter) and a daughter (Naomi) with his first wife, Neilia Hunter Biden (m. 1966), who died along with Naomi in a car crash in 1972.

Presidential Impeachment in U.S. History

The U.S. Constitution provides for impeachment and removal from office of federal officials on grounds of "Treason, Bribery, or other high Crimes and Misdemeanors" (Article II, Sect. 4). Impeachment is the bringing of charges by the House of Representatives, whose members can adopt impeachment articles on a simple majority vote. It is followed by a Senate trial; a two-thirds majority vote of Senators present is needed for conviction and removal from office.

In 1868, **Andrew Johnson** became the first president impeached by the House, for his removal of Sec. of War Edwin M. Stanton without first notifying the Senate. He was tried but not convicted. In 1974, impeachment articles against Pres. **Richard Nixon**, in connection with the Watergate scandal, were adopted by the House Judiciary Committee. He resigned Aug. 9, and the House accepted the committee report without taking further action. In 1998, Pres. **Bill Clinton** was impeached by the House in connection with his cover-up of a sexual relationship with former White House intern Monica Lewinsky. He was tried in the Senate in 1999 and acquitted. Pres. **Donald Trump** was impeached in 2019 on charges related to allegations that he used his office to pressure the president of Ukraine to investigate a political rival; he was acquitted by the Senate in 2020. Trump was impeached again in Jan. 2021 for "incitement of insurrection" but again was not convicted.

Burial Places of the Presidents

President	Burial place
Washington	Mt. Vernon, VA
J. Adams	Quincy, MA
Jefferson	Charlottesville, VA
Madison	Montpelier Station, VA
Monroe	Richmond, VA
J. Q. Adams	Quincy, MA
Jackson	Nashville, TN
Van Buren	Kinderhook, NY

Harding	Marion, OH
Coolidge	Plymouth Notch, VT
Hoover	West Branch, IA
F. Roosevelt	Hyde Park, NY
Truman	Independence, MO
Eisenhower	Abilene, KS
Kennedy	Arlington Natl. Cem., VA
L. B. Johnson	Stonewall, TX
Nixon	Yorba Linda, CA
Ford	Grand Rapids, MI
Reagan	Simi Valley, CA
G. H. W. Bush	College Station, TX

Presidential Libraries

Presidential libraries are coordinated by the National Archives and Records Administration (www.archives.gov/presidentiallibraries/). Under the Presidential Records Act, material is available through Freedom of Information Act requests starting five years after a president has left office.

NARA's Barack Obama Presidential Library (www.obamalibrary.gov) will be a fully digital library; the Obama Presidential Center (www.obama.org/the-center), scheduled to break ground in late 2021 in Chicago, will be a privately operated, non-governmental organization. Records of the Trump administration are housed at National Archives facilities in Washington, DC, and will be available through FOIA requests as of Jan. 2026. Plans to build a privately funded Trump presidential museum and library had not been announced as of mid-2021.

Year	President elected	Popular	Elec.

2016*	Donald J. Trump (R)	62,984,828	304
	Major losing candidate(s)	Popular	Elec.
	Hillary Clinton (D)	65,853,514	227
Year	President elected	Popular	Elec.
2020	Joseph R. Biden (D)	81,268,924	306
	Major losing candidate(s)	Popular	Elec.
	Donald J. Trump (R)	74,216,154	232

Note: Not all candidates who received electoral votes are shown. ***1800**—Elected by House of Representatives because of tied electoral vote. **1824**—Elected by House of Representatives because no candidate polled a majority. By 1824, the Democratic Republicans had become a loose coalition of competing political groups. By 1828, Andrew Jackson supporters were known as Democrats and John Q. Adams and Henry Clay supporters as National Republicans. **1872**—Greeley died Nov. 29, 1872. His electoral votes were split among four individuals. **1876**—FL, LA, OR, and SC election returns were disputed. Congress in joint session (Mar. 2, 1877) declared Hayes and Wheeler elected president and vice president. **1956**—Democrats elected 74 electors, but one from AL refused to vote for Stevenson. **1960**—Sen. Harry F. Byrd (D, VA) received 15 electoral votes. **1972**—John Hospers of CA received a vote from an elector of VA. **1976**—Ronald Reagan of CA received a vote from an elector of WA. **1988**—Sen. Lloyd Bentsen (D, TX) received a vote from an elector of WV. **2000**—One Gore elector from Washington, DC, abstained. Nader was listed as “independent” on the ballot in some states; he was not on the ballot in all states. **2004**—One MN elector voted for VP candidate John Edwards for both president and vice president. **2016**—Seven electors from three states (HI, TX, WA) did not vote for the candidate to whom they were pledged (two Trump electors defected, as did five pledged to Clinton).

2020	Biden-Trump	66.8	61.3

NA = Not available. **Note:** Data prior to 1964 is from a legacy source and may not be directly comparable to more recent data. The 1972 presidential election was the first for which eligible voters included 18- to 20-year-olds. The voting-age citizen pop. includes those who are ineligible to vote due to imprisonment or prior felony convictions. The voting-age pop. comprises the former group as well as residents who are ineligible to vote because they are not U.S. citizens.

Electoral Votes for President, 2020

Electoral votes based on the 2010 Census were in force beginning with the 2012 elections.

(1) Trump was awarded one of Maine's four electoral votes. (2) Biden was awarded one of Nebraska's five electoral votes.

Presidential Popular Vote, 2020

None of these candidates	14,079	<0.01
Total	158,383,403	

Note: Party designations vary from one state to another; party label listed may not necessarily represent a political party organization. Vote totals for the candidates listed above include any write-in votes.

The Electoral College

The president and the vice president are the only elective federal officials not chosen by direct vote of the people. They are elected by the members of the Electoral College, an institution provided for in the U.S. Constitution. Under the electoral college system, a candidate who fails to win the popular vote still may win a majority of electoral votes. This happened in the elections of 1876, 1888, 2000, and 2016.

Each state chooses as many electors as it has senators and representatives in Congress. With 100 senators and 435 representatives (plus, since 1964, three electors for Washington, DC), there are 538 members of the Electoral College, with a majority of 270 electoral votes needed to elect the president and vice president.

Each political party chooses its electors, by nomination at a state convention or by vote of the party central committee in each state. An elector cannot be a member of Congress or federal office holder. The electors of the party receiving the highest vote count are elected under a winner-take-all system. Two states, Maine and Nebraska, allow for proportional allocation.

The electors meet on the first Monday after the second Wednesday in Dec. Certified votes of the electors in each state are sent to the president of the U.S. Senate. He or she then opens them in a joint session of Congress held in early Jan. The electoral votes of all the states are then officially counted.

If no candidate for president has a majority, the House of Representatives chooses a president from the top three candidates, with all representatives from each state combining to cast one vote for that state. The House decided the outcomes of the 1800 and 1824 presidential elections. If no candidate for vice president has a majority, the Senate chooses from the top two, with the senators voting as individuals. The Senate chose the vice president following the 1836 election.

Major-Party Nominees for President and Vice President, 1856-2020

Asterisk (*) denotes winning ticket.

Democratic

1992	George H. W. Bush	Dan Quayle
1996	Bob Dole	Jack Kemp
2000	George W. Bush*	Richard Cheney
2004	George W. Bush*	Richard Cheney

Republican		
Year	President	Vice President
2008	John McCain	Sarah Palin
2012	Mitt Romney	Paul Ryan
2016	Donald J. Trump*	Mike Pence
2020	Donald J. Trump	Mike Pence

(1) Douglas and Johnson were nominated at the Baltimore convention. An earlier convention in Charleston, SC, failed to reach a consensus and resulted in a split in the party. The Southern faction of the Democrats nominated John Breckinridge for president and Joseph Lane for vice president. (2) Died Oct. 30; replaced on ballot by Nicholas Butler. (3) Chosen by Democratic National Committee after Thomas Eagleton withdrew because of controversy over past treatments for depression.

Third-Party and Independent Presidential Candidates

In most elections since 1860, fewer than one vote in 20 has been cast for a third-party candidate. Still, independent and third-party candidates often bring attention to prominent issues and can affect the outcome between major-party candidates.

Major vote-getters among third-party and independent candidates include James B. Weaver (People's Party), 1892; former Pres. Theodore Roosevelt (Progressive Party), 1912; Robert M. La Follette (Progressive Party), 1924; George C. Wallace (American Independent Party), 1968; and H. Ross Perot, as an independent in 1992 and with the Reform Party in 1996. In these six elections, non-major-party candidates combined polled at least 10% of the vote.

Roosevelt outpolled the Republican candidate, William Howard Taft, in 1912, capturing 28% of the popular vote and 88 electoral votes. In 1948, Strom Thurmond (States' Rights [Dixiecrat]) won 39 electoral votes from five Southern states; however, third-party candidates received only 5.75% of the popular vote. George Wallace's popularity in the same region in 1968 allowed him to get 46 electoral votes and 13.5% of the popular vote.

In 1992, Ross Perot captured 19% of the popular vote but failed to win a single electoral vote. In 1996, Perot won 8% of the popular vote; all third-party candidates combined won just over 10%. In

2000, Ralph Nader (Green, independent) won about 3% of the vote.
Gary Johnson (Libertarian) won about 3% in 2016.

Notable Third-Party and Independent Campaigns by Year

Party	Presidential nominee	Year	Issues	Strength in
Free Soil	Martin Van Buren	1848	Anti-slavery	NY, OH
American (Know-Nothing)	Millard Fillmore	1856	Anti-immigrant	Northeast, South
Greenback	Peter Cooper	1876	For “cheap money,” labor rights	National
Greenback	James B. Weaver	1880	For “cheap money,” labor rights	National
Prohibition	John P. St. John	1884	Anti-liquor	National
People’s (Populist)	James B. Weaver	1892	For “cheap money,” end of national banks	South, West
